**Design Recommendations for Intelligent Tutoring Systems** Robert Sottolare 2015-07-05 Design Recommendations for Intelligent Tutoring Systems (ITSs) explores the impact of intelligent tutoring system design on education and training. Specifically, this volume examines "Authoring Tools and Expert Modeling Techniques". The "Design Recommendations book series examines tools and methods to reduce the time and skill required to develop Intelligent Tutoring Systems with the goal of improving the Generalized Intelligent Framework for Tutoring (GIFT). GIFT is a modular, service-oriented architecture developed to capture simplified authoring techniques, promote reuse and standardization of ITSs along with automated instructional techniques and effectiveness evaluation capabilities for adaptive tutoring tools and methods.

**Capitalism and Class in the Gulf Arab States** Adam Hanieh 2016-04-30 This book analyzes the recent development of Gulf capitalism through to the aftermath of the 2008 economic crisis. Situating the Gulf within the evolution of capitalism at a global scale, it presents a novel theoretical interpretation of this important region of the Middle East political economy.

*Building a Circular Future* Kasper Guldager Jensen 2016 About the way we use and reuse the resources in the building industry and ultimately eliminate the concept of waste. The book seeks to provide inspiration for 'building a circular future' by providing a set of principles and bringing forward the best practices from in and outside the building industry. This book presents findings, case studies, background and context for the project ?Building a Circular Future?, and consist of three main chapters: Design for Disassembly, Material Passport and Circular Economy. All content comes from extensive research and through workshops with partners across industries. The book furthermore provides 15 principles for "Building a Circular Future" and a thoroughly calculated business case, which documents that a

demolition, that today would cost ?2.151.249,56 can be turned into a ?4.705.858,41 business upside in a future circular building industry.

**Economic Development in Saudi Arabia** Rodney Wilson 2004 The changing political situation in the Middle East poses challenges for the economies of the region, and some see none more vulnerable to collapse than Saudi Arabia's. Yet as this study demonstrates, the fundamentals of the kingdom's economy are relatively robust, as over two thirds of GDP is accounted for by the non-oil sector, and impressive modern industries have been established notably in petrochemicals. The financial system functions well, and despite substantial government debts, there is low inflation and currency stability. The private sector increasingly drives the economy, although job creation has been insufficient to prevent rising youth unemployment. The development challenges Saudi Arabia faces are similar to those of other middle-income countries, and three decades of diversification have made the economy less unique than it was in the oil boom years of the 1970s.

**Advances in Polymer Materials and Technology** Anandhan Srinivasan 2016-08-19 Polymers are the only material that can act as matrices for the incorporation of the widest range of ceramics, nanotubes, nanoparticles, as well as a variety of short and continuous fibres, to create new building and structural materials. Polymer science and technology is a fast growing and dynamic area of study. With this in mind, the author has followed a multidisciplinary approach covering major contemporary advancements in the subject. Largely self-contained, the book includes all essential aspects of the topic such as: polymer nanocomposites, electrospinning, and polymers in electronic applications. It offers extensive guidance on fly-ash-based polymer composites, conducting polymers, shape memory polymers, and thermoset polymer nanocomposites. There is also a review chapter on thermoplastic elastomers based on block copolymers and dynamically cured rubber-plastic blends. Ferroelectric polymer nanocomposites, polymer-based dielectrics, organic field effect transistors, super hydrophobic polymers, and biopolymers are also extensively covered. The content has been classified into six sections of polymer materials and technology: novel polymer composites, nano polymer technology, micro-macro-nano testing and characterization of polymers, speciality polymers, bio-based and biocompatible polymer materials, and new polymer applications. The book is aimed specifically at graduate students and researchers engaged in the study of polymer science and engineering and generically at those studying mechanical engineering, chemical engineering, materials science, and engineering, as well as related industry professionals.

**Integrative Production Technology** Christian Brecher 2017-01-09 This contributed volume contains the research results of the Cluster of Excellence "Integrative Production Technology for High-Wage Countries", funded by the German Research Society (DFG). The approach to the topic is genuinely interdisciplinary, covering insights from fields such as engineering, material sciences, economics and social sciences. The book contains coherent deterministic models for integrative product creation chains as well as harmonized cybernetic models of production systems. The content is structured into five sections: Integrative Production Technology, Individualized Production, Virtual Production Systems, Integrated Technologies, Self-Optimizing Production Systems and Collaboration Productivity. The target audience

primarily comprises research experts and practitioners in the field of production engineering, but the book may also be beneficial for graduate students.

**The Belgian Economy in the Twentieth Century** Andre Mommen 2002-09-26 By the end of the nineteenth century Belgium was enjoying considerable economic success. However, the economic experience has proved significantly less stable in the twentieth century. In *The Belgian Economy in the Twentieth Century* Professor Andre Mommen describes and analyzes the changing fortunes of the Belgian economy throughout this century. He traces the Belgian experience from the state regulation of the inter-war period to its current difficulties. Central to the discussion is the innate problem of Belgian dependence on international trade due to her small domestic market. This volume explains how a small but industrialized European nation succeeded in preserving its competitiveness only to succumb to a devastating debt crisis in the last decade.

Routledge Handbook of International Organization Bob Reinalda 2013-06-07 This Handbook brings together scholars whose essays discuss significant issues with regard to international organization as a process and international organizations as institutions. Although the focus is on intergovernmental organizations (IGOs), non-governmental organizations (NGOs) are discussed where relevant. The handbook is divided into six parts: Documentation, Data Sets and Sources International Secretariats as Bureaucracies Actors within International Bureaucracies Processes within International Bureaucracies Challenges to International Organizations, and Expanding International Architectures. The state-of-the-art articles are meant to encourage current and future generations of scholars to enjoy working in and further exploiting the field and are also of great interest to practitioners of international organization and global governance

*Best Practice Guideline* British Retail Consortium 2009-07-31 The contamination of a product with the physical presence of something not intended to be there (a foreign body) often with the potential to cause harm, can result in issues that may include customer complaints, product wastage and brand damage along. Any manufacturing or storage and transport business must have an effective control system to prevent product contamination by foreign bodies. This guideline focuses on the technologies behind X-ray and metal detection and promotes best practice on aspects to be considered when establishing and operating these systems.

**The Global Innovation Index 2012** Cornell University 2012 The Global Innovation Index ranks the innovation performance of 141 countries and economies around the world, based on 84 indicators. This edition explores the impact of innovation-oriented policies on economic growth and development. High-income and developing countries alike are seeking innovation-driven growth through different strategies. Some countries are successfully improving their innovation capacity, while others still struggle.

edited book provides an in-depth overview of carbon dioxide (CO<sub>2</sub>) transformations to sustainable power technologies. It also discusses the wide scope of issues in engineering avenues, key designs, device fabrication, characterizations, various types of conversions and related topics. It includes studies focusing on the applications in catalysis, energy conversion and conversion technologies, etc. This is a unique reference guide, and one of the detailed works is on this technology. The book is the result of commitments by leading researchers from various backgrounds and expertise. The book is well structured and is an essential resource for scientists, undergraduate, postgraduate students, faculty, R&D professionals, energy chemists and industrial experts.

**Integrated Biorefineries** Paul R. Stuart 2012-12-10 Integrated Biorefineries: Design, Analysis, and Optimization examines how to create a competitive edge in biorefinery innovation through integration into existing processes and infrastructure. Leading experts from around the world working in design, synthesis, and optimization of integrated biorefineries present the various aspects of this complex

System Safety Engineering and Risk Assessment Nicholas J. Bahr 2018-10-08 We all know that safety should be an integral part of the systems that we build and operate. The public demands that they are protected from accidents, yet industry and government do not always know how to reach this common goal. This book gives engineers and managers working in companies and governments around the world a pragmatic and reasonable approach to system safety and risk assessment techniques. It explains in easy-to-understand language how to design workable safety management systems and implement tested solutions immediately. The book is intended for working engineers who know that they need to build safe systems, but aren't sure where to start. To make it easy to get started quickly, it includes numerous real-life engineering examples. The book's many practical tips and best practices explain not only how to prevent accidents, but also how to build safety into systems at a sensible price. The book also includes numerous case studies from real disasters that describe what went wrong and the lessons learned. See What's New in the Second Edition: New chapter on developing government safety oversight programs and regulations, including designing and setting up a new safety regulatory body, developing safety regulatory oversight functions and governance, developing safety regulations, and how to avoid common mistakes in government oversight Significantly expanded chapter on safety management systems, with many practical applications from around the world and information about designing and building robust safety management systems, auditing them, gaining internal support, and creating a safety culture New and expanded case studies and "Notes from Nick's Files" (examples of practical applications from the author's extensive experience) Increased international focus on world-leading practices from multiple industries with practical examples, common mistakes to avoid, and new thinking about how to build sustainable safety management systems New material on safety culture, developing leading safety performance indicators, safety maturity model, auditing safety management systems, and setting up a safety knowledge management system

**NASA Systems Engineering Handbook NASA/SP-2016-6105 REV 2** National Aeronautics and Space Administration 2019-10-08 Since the initial writing of NASA/SP-6105

in 1995 and the following revision (Rev 1) in 2007, systems engineering as a discipline at the National Aeronautics and Space Administration (NASA) has undergone rapid and continued evolution. Changes include using Model-Based Systems Engineering to improve development and delivery of products, and accommodating updates to NASA Procedural Requirements (NPR) 7123.1. Lessons learned on systems engineering were documented in reports such as those by the NASA Integrated Action Team (NIAT), the Columbia Accident Investigation Board (CAIB), and the follow-on Diaz Report. Other lessons learned were garnered from the robotic missions such as Genesis and the Mars Reconnaissance Orbiter as well as from mishaps from ground operations and the commercial spaceflight industry. Out of these reports came the NASA Office of the Chief Engineer (OCE) initiative to improve the overall Agency systems engineering infrastructure and capability for the efficient and effective engineering of NASA systems, to produce quality products, and to achieve mission success. This handbook update is a part of that OCE-sponsored Agency-wide systems engineering initiative. In 1995, SP-6105 was initially published to bring the fundamental concepts and techniques of systems engineering to NASA personnel in a way that recognized the nature of NASA systems and the NASA environment. This revision (Rev 2) of SP-6105 maintains that original philosophy while updating the Agency's systems engineering body of knowledge, providing guidance for insight into current best Agency practices, and maintaining the alignment of the handbook with the Agency's systems engineering policy. The update of this handbook continues the methodology of the previous revision: a top-down compatibility with higher level Agency policy and a bottom-up infusion of guidance from the NASA practitioners in the field. This approach provides the opportunity to obtain best practices from across NASA and bridge the information to the established NASA systems engineering processes and to communicate principles of good practice as well as alternative approaches rather than specify a particular way to accomplish a task. The result embodied in this handbook is a top-level implementation approach on the practice of systems engineering unique to NASA. Material used for updating this handbook has been drawn from many sources, including NPRs, Center systems engineering handbooks and processes, other Agency best practices, and external systems engineering textbooks and guides. This handbook consists of six chapters: (1) an introduction, (2) a systems engineering fundamentals discussion, (3) the NASA program/project life cycles, (4) systems engineering processes to get from a concept to a design, (5) systems engineering processes to get from a design to a final product, and (6) crosscutting management processes in systems engineering. The chapters are supplemented by appendices that provide outlines, examples, and further information to illustrate topics in the chapters. The handbook makes extensive use of boxes and figures to define, refine, illustrate, and extend concepts in the chapters. Finally, it should be noted that this handbook provides top-level guidance for good systems engineering practices; it is not intended in any way to be a directive. NASA/SP-2016-6105 Rev2 supersedes SP-2007-6105 Rev 1 dated December, 2007.

**The Arab State and Neo-Liberal Globalization** Laura Guazzone 2022-07-01 Now available in paperback, this collection of essays offers an alternative approach to the study of today's Arab states by focusing on their participation in neo-liberal globalization rather than on authoritarianism or Islam. The effects of the restructuring of traditional state power engendered by globalization are analyzed separately, through updated empirical research into the political, economic, and security processes of each country considered. Egypt, Lebanon, Morocco, and Saudi Arabia are the case studies selected to represent different paths towards a shared model of a 'new' Arab state which, far from representing an

exceptional case of resilience against global trends, may be seen in many instances as typifying their effects. The book offers both an overall conceptualization of change affecting the Arab states, domestically and internationally, and a series of in-depth case studies by country and functional areas. It is extremely timely when viewed within the context of the current political unrest and unprecedented change within the Middle East. This paperback edition includes a new preface which links the author's research to the current Arab Spring crisis.

**European Higher Education Area: The Impact of Past and Future Policies** Adrian Curaj 2018-07-03 This volume presents the major outcomes of the third edition of the Future of Higher Education - Bologna Process Researchers Conference (FOHE-BPRC 3) which was held on 27-29 November 2017. It acknowledges the importance of a continued dialogue between researchers and decision-makers and benefits from the experience already acquired, this way enabling the higher education community to bring its input into the 2018-2020 European Higher Education Area (EHEA) priorities. The Future of Higher Education - Bologna Process Researchers Conference (FOHE-BPRC) has already established itself as a landmark in the European higher education environment. The two previous editions (17-19 October 2011, 24-26 November 2014), with approximately 200 European and international participants each, covering more than 50 countries each, were organized prior to the Ministerial Conferences, thus encouraging a consistent dialogue between researchers and policy makers. The main conclusions of the FOHE Conferences were presented at the EHEA Ministerial Conferences (2012 and 2015), in order to make the voice of researchers better heard by European policy and decision makers. This volume is dedicated to continuing the collection of evidence and research-based policymaking and further narrowing the gap between policy and research within the EHEA and broader global contexts. It aims to identify the research areas that require more attention prior to the anniversary 2020 EHEA Ministerial Conference, with an emphasis on the new issues on rise in the academic and educational community. This book gives a platform for discussion on key issues between researchers, various direct higher education actors, decision-makers, and the wider public. This book is published under an open access CC BY license.

**Toward a Sustainable Energy Future** Agence internationale de l'énergie 2001 The manner in which we produce & consume energy is of crucial importance to sustainable development, as energy has deep relationships with each of its three dimensions -- the economy, the environment & social welfare. These relationships develop in a fast-moving & complex situation characterized by increasing globalisation, growing market liberalisation & new technologies, as well as by growing concerns about climate change & energy-supply security. In order to make energy an integral part of sustainable development, new policies need to be developed. Such policies must strike a balance among the three dimensions of sustainable development. They must reduce our exposure to large-scale risk. The IEA has synthesized a number of experiences with policies aimed to promote sustainable development. These experiences are reported in seven subject chapters on energy supply security, market reform, improving energy efficiency, renewable energies, sustainable transport, flexibility mechanisms for greenhouse gas reductions & on non-Member countries.

**Multilayer Flexible Packaging** John R. Wagner, Jr. 2016-03-29 Multilayer Flexible Packaging, Second Edition, provides a thorough introduction to the manufacturing and applications of flexible plastic films, covering materials, hardware and processes, and

multilayer film designs and applications. The book gives engineers and technicians a better understanding of the capability and limitations of multilayer flexible films and how to use them to make effective packaging. It includes contributions from world renowned experts and is fully updated to reflect the rapid advances made in the field since 2009, also including an entirely new chapter on the use of bio-based polymers in flexible packaging. The result is a practical, but detailed reference for polymeric flexible packaging professionals, including product developers, process engineers, and technical service representatives. The materials coverage includes detailed sections on polyethylene, polypropylene, and additives. The dies used to produce multilayer films are explored in the hardware section, and the process engineering of film manufacture is explained, with a particular focus on meeting specifications and targets. In addition, a new chapter has been added on regulations for food packaging - including both FDA and EU regulations. Provides a complete introduction to multilayer flexible packaging, assisting plastics practitioners with the development, design, and manufacture of flexible packaging for food, cosmetics, pharmaceuticals, and more. Presents thorough, well-written, and up-to-date reviews of the current technology by experts in the field, making this an essential reference for any engineer or manager. Includes discussion and analysis of the latest rules and regulations governing food packaging.

**Recycling of Polyethylene Terephthalate** Martin J. Forrest 2019-04-01 Polyethylene terephthalate (PET) is the most recycled plastic in the world. This book covers all from the world market of PET to the many technologies and processes developed for separation, decontamination, recycling and manufacturing into food-grade and non-food-grade products of PET. Also, regulations, testing methods and analytical procedures according to the current regulatory framework are presented.

**Environmental Online Communication** Arno Scharl 2013-03-09 This book brings together high quality articles exploring the design, implementation, management, funding, promotion and evaluation of networked information systems that advocate sustainability and the protection of natural ecosystems. Case studies of deployed and planned information systems complement theoretical work on the methodological, technological and organizational foundations of environmental online communication.

**Fused Deposition Modeling Based 3D Printing** Harshit K. Dave 2021-04-21 This book covers 3D printing activities by fused deposition modeling process. The two introductory chapters discuss the principle, types of machines and raw materials, process parameters, defects, design variations and simulation methods. Six chapters are devoted to experimental work related to process improvement, mechanical testing and characterization of the process, followed by three chapters on post-processing of 3D printed components and two chapters addressing sustainability concerns. Seven chapters discuss various applications including composites, external medical devices, drug delivery system, orthotic inserts, watertight components and 4D printing using FDM process. Finally, six chapters are dedicated to the study on modeling and optimization of FDM process using computational models, evolutionary algorithms, machine learning, metaheuristic approaches and optimization of layout and tool path.

unique, data-led, evidence-based approach to reflective practice in English language teaching, this book brings together theory, research and practice in an accessible way to demonstrate what reflective practice looks like and how it is undertaken in a range of contexts. Readers learn how to do and to research reflective practice in their own settings. Through the use of data, dialogue and appropriate tools, the authors show how reflective practice can be used as an ongoing teaching tool that supports professional self-development.

Uncertainty Handling and Quality Assessment in Data Mining Michalis Vazirgiannis  
2003-07-24 *Uncertainty Handling and Quality Assessment in Data Mining* provides an introduction to the application of these concepts in Knowledge Discovery and Data Mining. It reviews the state-of-the-art in uncertainty handling and discusses a framework for unveiling and handling uncertainty. Coverage of quality assessment begins with an introduction to cluster analysis and a comparison of the methods and approaches that may be used. The techniques and algorithms involved in other essential data mining tasks, such as classification and extraction of association rules, are also discussed together with a review of the quality criteria and techniques for evaluating the data mining results. This book presents a general framework for assessing quality and handling uncertainty which is based on tested concepts and theories. This framework forms the basis of an implementation tool, 'Uminer' which is introduced to the reader for the first time. This tool supports the key data mining tasks while enhancing the traditional processes for handling uncertainty and assessing quality. Aimed at IT professionals involved with data mining and knowledge discovery, the work is supported with case studies from epidemiology and telecommunications that illustrate how the tool works in 'real world' data mining projects. The book would also be of interest to final year undergraduates or post-graduate students looking at: databases, algorithms, artificial intelligence and information systems particularly with regard to uncertainty and quality assessment.

**Plastics Application Technology for Lightweight Automobiles** Sudhakar Marur  
2013-08-06 This book is focused on the use of plastics in automobiles for traditional applications, as well as for more advanced uses such as under-the-hood components. Engineering thermoplastics offer the ability to tailor-make components from polymers, and to design parts for enhanced performance, new functionality, part integration, and elimination of secondary operations. Parts made from engineering thermoplastics can be manufactured within specified cost constraints, and using manufacturing methods that offer a wide range of production flexibility. A decade of research and real-world applications is presented by the authors on application technology development for various aspects of automotive design - concept design, CAD modeling, predictive engineering methods through CAE, manufacturing method simulation, and prototype and tool making. Additional advantages of plastics are covered and include greater styling, improved energy absorption, and enhanced performance over traditional materials, all while fostering environmental sustainability and reducing overall vehicle weight for next generation automobiles.

concepts and methods from education, psychology, statistics, econometrics, medicine, language, and forensic science, this textbook provides an interdisciplinary methodological approach to study human learning processes longitudinally. This longitudinal approach can help to acquire a better understanding of learning processes, can inform both future learning and the revision of educational content and formats, and may help to foster self-regulated learning skills. The initial section of this textbook focuses on different types of research questions as well as practice-driven questions that may refer to groups or to individual learners. This is followed by a discussion of different types of outcome variables in educational research and practice, such as pass/fail and other dichotomies, multi-category nominal choices, ordered performance categories, and different types of quantifiable (i.e., interval or ratio level of measurement) variables. For each of these types of outcome variables, single-measurement and repeated-measurements scenarios are offered with clear examples. The book then introduces cross-sectional and longitudinal interdependence of learning-related variables through emerging network-analytic methods and in the final part the learned concepts are applied to different types of studies involving time series. The book concludes with some general guidelines to give direction to future (united) educational research and practice. This textbook is a must-have for all applied researchers, teachers and practitioners interested in (the teaching of) human learning, instructional design, assessment, life-long learning or applications of concepts and methods commonly encountered in fields such as econometrics, psychology, and sociology to educational research and practice.

**Knowledge Asset Management** Gregoris Mentzas 2012-12-06 A new economy is emerging. An economy that is transforming the fundamental rules of business. An economy based on exploiting knowledge and innovation. An economy where knowledge is the main source of wealth for regions, nations, enterprises and people. This new economy is based on economic values far removed from those of the industrial economy. Value has shifted towards intangibles and in particular towards increasing value by incorporating knowledge into services and products. The advent of this new economy is rapidly changing the role and structure of global business. Winning enterprises are those best able to harness the benefits and opportunities of information and communication technology, capitalize on their knowledge base and move at the speed of the market. Knowledge management lies at the heart of the European Community's competitiveness strategy. The European Commission facilitates and supports applied research in knowledge management through its Information Society Technologies (IST) programme, a major theme of research and technological development within the European Union's Research and Technology Development Framework Programme. Specifically, the New Methods of Work and Electronic Commerce action of the IST programme supports long-term applied research in areas combining technological innovation with new work practices and advanced business and work models.

Servitization in Industry Gunter Lay 2014-06-13 This book summarizes the "interim result" of the servitization activities in manufacturing industries. While the early literature on servitization tended to stress only its advantages, more recently, scholars have also started to refer to the challenges associated with servitization. This book attempts to give a balanced picture of servitization. The book is structured in four parts: Part I introduces the topic by presenting the most recent academic discussion about servitization and uses an empirical analysis to show the degree of servitization across Europe. The results of this analysis are then compared to the discussion in the literature. This comparison highlights the existing

discrepancies between the rather euphoric literature and the more skeptical practical experience. The second and third parts attempt to explain these discrepancies by taking as a starting point the assumption that servitization recommendations have to consider the heterogeneity of the manufacturing sector and the capabilities of the provider. Part II presents articles which analyze the specific characteristics of different sectors with their barriers and potentials and presents frameworks for a successful servitization of the core sectors in European manufacturing industries which include, e.g. aeronautics, automotive, ICT, chemical industries, pulp and paper industries and different engineering sectors. Part III focuses on companies' capabilities which are necessary for successful servitization. These include strategic management, marketing, organization, innovation, engineering, human resources, controlling, quality and networks. All the contributions in parts II and III add up to a detailed picture of servitization for sectors and functions and indicate the practical implications for enterprises in manufacturing industries. The fourth part concludes the book with a chapter summarizing the findings and giving an outlook of servitization in manufacturing industries, its challenges and future developments.

*Global Innovation Index 2016* Cornell University 2016 The Global Innovation Index ranks the innovation performance of 128 countries and economies around the world, based on 82 indicators. This edition explores the impact of innovation-oriented policies on economic growth and development. High-income and developing countries alike are seeking innovation-driven growth through different strategies. Some countries are successfully improving their innovation capacity, while others still struggle.

**India's Saudi Policy** P. R. Kumaraswamy 2018-09-29 The book traces India's Saudi Policy and locates the current state of bilateral relations and the challenges it faces. It argues that during the Cold War the relations were largely shaped by the Pakistan factor which in turn inhibited both sides from exploring the importance and value of one another. As a result, the relations were largely transactional and marginal. The end of the Cold War coincided with two interesting developments, namely, significant growth in India's economic power and influence and the de-hyphenation of Pakistan from its Middle East policy. This resulted in greater political engagements between India and Saudi Arabia and was strengthened by the growing energy trade ties. For long expatriate population and haj have been the backbone of the relations, and they have been new instruments as India looks to enhance its engagements with the Kingdom through investments opportunities, political contacts, shared security concerns and strategic cooperation. India's Saudi policy, however, face many challenges most importantly the regional instability, the Iran factor, low oil price and the international dynamics. The book will be the first comprehensive work on the India-Saudi relations. Though targeting a wider audience, it will be academically grounded and based on primary sources collected from India and Saudi Arabia.

**World Development Report 2016** World Bank Group 2016-01-14 Digital technologies are spreading rapidly, but digital dividends--the broader benefits of faster growth, more jobs, and better services--are not. If more than 40 percent of adults in East Africa pay their utility bills using a mobile phone, why can't others around the world do the same? If 8 million

entrepreneurs in China--one third of them women--can use an e-commerce platform to export goods to 120 countries, why can't entrepreneurs elsewhere achieve the same global reach? And if India can provide unique digital identification to 1 billion people in five years, and thereby reduce corruption by billions of dollars, why can't other countries replicate its success? Indeed, what's holding back countries from realizing the profound and transformational effects that digital technologies are supposed to deliver? Two main reasons. First, nearly 60 percent of the world's population are still offline and can't participate in the digital economy in any meaningful way. Second, and more important, the benefits of digital technologies can be offset by growing risks. Startups can disrupt incumbents, but not when vested interests and regulatory uncertainty obstruct competition and the entry of new firms. Employment opportunities may be greater, but not when the labor market is polarized. The internet can be a platform for universal empowerment, but not when it becomes a tool for state control and elite capture. The World Development Report 2016 shows that while the digital revolution has forged ahead, its 'analog complements'--the regulations that promote entry and competition, the skills that enable workers to access and then leverage the new economy, and the institutions that are accountable to citizens--have not kept pace. And when these analog complements to digital investments are absent, the development impact can be disappointing. What, then, should countries do? They should formulate digital development strategies that are much broader than current information and communication technology (ICT) strategies. They should create a policy and institutional environment for technology that fosters the greatest benefits. In short, they need to build a strong analog foundation to deliver digital dividends to everyone, everywhere.

**Higher Education Reforms in Romania** Adrian Curaj 2014-11-07 Romania is an active player in various international higher education areas, while undergoing a series of higher education reforms within its national framework. The Higher Education Evidence Based Policy Making: a necessary premise for progress in Romania project was implemented by the Executive Agency for Higher Education, Research, Development and Innovation Funding (UEFISCDI) in the timeframe February 2012 - February 2014, being co-financed by the European Social Fund through the Operational Programme "Administrative Capacity Development". The project aimed to increase the capacity of public administration for evidence-based policy making in the field of higher education, while focusing on good practices at international level and impact assessment. With the contribution of the national and international experts, the project has generated a number of analysis and studies on the existing higher education public policies (quality assurance, internationalisation, equity, data collection, the Bologna Process, financing of higher education). Based on the results of the project, the book will reunite a number of policy research articles which would tap into the innovative aspects of the project's activities and provide a concise overview of what good practices can be drawn from the empirical research conducted in this project. The book will therefore aim to improve the information on Romanian higher education reforms, as well as on the concrete evidence-based policy proposals which could be transformed into future policy solutions in the Romanian higher education system.

University and School Collaborations during a Pandemic Fernando M. Reimers 2021-11-05 Based on twenty case studies of universities worldwide, and on a survey administered to leaders in 101 universities, this open access book shows that, amidst the significant challenges caused by the COVID-19 pandemic, universities found ways to engage with schools to support them in sustaining educational opportunity. In doing so, they generated

considerable innovation, which reinforced the integration of the research and outreach functions of the university. The evidence suggests that universities are indeed open systems, in interaction with their environment, able to discover changes that can influence them and to change in response to those changes. They are also able, in the success of their efforts to mitigate the educational impact of the pandemic, to create better futures, as the result of the innovations they can generate. This challenges the view of universities as “ivory towers” being isolated from the surrounding environment and detached from local problems. As they reached out to schools, universities not only generated clear and valuable innovations to sustain educational opportunity and to improve it, this process also contributed to transform internal university processes in ways that enhanced their own ability to deliver on the third mission of outreach.
