Experiments in Ethics Kwame Anthony Appiah 2010-03-30 In the past few decades, scientists of human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics. Some moral theorists hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of “experimental philosophy,” provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.

in Sight captures the seething multiplicity of Bombay through the first – person accounts of an abortionist, a convert, a pregnant refugee, a gangster in hiding, a butcher, and an apathetic CEO, among others. As the reader is hurtled from monologue to short story to anecdote, disparate lives collide in tantalizing ways. A family flees religious persecution in their village to take refuge in an urban slum; women walk the tightrope of free will and dormant violence; a father and son grant each other the relief of estrangement; and young men and women struggle to comprehend the consequences of sexual attraction. Insightful, ironic, and scathingly honest, No God in Sight is a brilliant debut by a talented young writer.

After Cancer Care Gerald Lemole 2015-08-25 After the intense experience and range of emotion that comes with surgery, radiation, or chemotherapy (or all three), cancer patients often find themselves with little or no guidance when it comes to their health post-treatment. After Cancer Care is the much-needed authoritative, approachable guide that fills this gap. It includes information on how to maintain physical health—with chapters on epigenetics, nutrition, and exercise—as well as emotional health through stress management techniques. The cutting-edge and growingly popular science of Epigenetics has shown that you are not stuck with your genetic history: your choices in diet, exercise, and even relationships can help determine whether or not your genes promote cancer, and therefore determine your propensity for relapse. Your lifestyle has an effect on the most common types of cancer including breast cancer, prostate cancer, melanoma, endometrial cancer, colon cancer, bladder cancer, and lymphoma. The doctors present easy-to-incorporate lifestyle changes to help you “turn on” hundreds of genes that fight cancer, and “turn off” the ones that encourage cancer, while recommending lifestyle plans to address each type. In addition, they share 34 healthy recipes and tips on staying active and exercising, detoxifying your house and environment, and taking supplements to help prevent relapse. With more than three decades of post-cancer-care experience, Drs. Lemole, Mehta, and McKee break down the science into palatable, practical takeaways so that you can drastically improve your quality of life and enjoy many years of cancer-free serenity.

Salvestrols: Nature Brian A. Schaefer 2018-09-19 Salvestrols are a new class of natural compounds that have a pharmacological definition rather than a chemical definition. They are defined by the action of the metabolites produced when they are metabolised by the CYP1B1 enzyme in cancer cells. Simply put, salvestrols are food-based compounds that are metabolised by CYP1B1 to produce metabolites that are anticancer agents. These anticancer agents suppress tumour growth by killing the cancer cells. Salvestrols provide an explanation of the link between diet and cancer and between fruit and vegetable consumption and lower cancer incidence.

Laetrile Case Histories John A. Richardson 2005 Here are 62 case histories proving beyond any doubt that Laetrile (Vitamin B17) works in the control of cancer. These are not anecdotal stories or cases of people who never had cancer in the first place. Each history is authenticated by a firm diagnosis and meticulous medical documentation. This book also recounts the personal battle of Dr. John Richardson who incurred the wrath of orthodox medicine when he and his patients elected to use vitamin therapy instead of surgery, drugs and radiation as the treatment of choice.
