Language and Communication in Mathematics Education Judit N. Moschkovich 2018-03-27 This book considers some of the outstanding questions regarding language and communication in the teaching and learning of mathematics – an established theme in mathematics education research, which is growing in prominence. Recent research has demonstrated the wide range of theoretical and methodological resources that can contribute to this area of study, including those drawing on cross-disciplinary perspectives influenced by, among others, sociology, psychology, linguistics, and semiotics. Examining language in its broadest sense to include all modes of communication, including visual and gestural as well as spoken and written modes, it features work presented and discussed in the Language and Communication topic study group (TSG 31) at the 13th International Congress on Mathematical Education (ICME-13). A joint session with participants of the Mathematics Education in a Multilingual and Multicultural Environment topic study group (TSG 32) enhanced discussions, which are incorporated in elaborations included in this book. Discussing cross-cutting topics it appeals to readers from a wide range of disciplines, such as mathematics education and research methods in education, multilingualism, applied linguistics and beyond.

Irradiation Technology Peter von der Hardt 2012-12-06 The International Topical Meeting on Irradiation Technology took place two the Neutron and its Applications (Cambridge, weeks after the Conference on th U. K.) marking the 50 anniversary of the discovery of the neutron. The application of neutrons from research reactors for materials testing requires a large variety of irradiation devices (vehicles) and their out-of-pile control and recording equipment. The in-pile sections are sophisticated in design and assembly, expensive, and consumable. There have been only a few international conferences on irradiation testing, the last one being limited to fast breeder reactor work (Jackson, Wyoming, September 1973). In 1982, however, two conferences picked up similar topics -the ANS Conference on Fast, Thermal, and Fusion Reactor Experiments (Salt Lake City, Utah, April 1982), -the Grenoble meeting (these proceedings). Overlapping has been avoided by putting the accent of the U.S. conference on fast reactor work, and on thermal reactor experiments at Grenoble. Put to gether, both conferences lined up more than 130 papers in this very specialised field, demonstrating a high level of technological

Membership in International Organizations Gerd Droege 2019-12-19 This book proposes that fundamental concepts of institutional law need to be rethought and revised. Contrary to conventional wisdom, international organizations do not need to have members, and the members do not need to be states and international organizations. Private sector entities may, for instance, also be full members. Furthermore, international organizations do not need to possess international legal personality, nor is their autonomy a corollary of their personality. Moreover, the notion of "subject of international law" also needs to be reconsidered and the very concepts and definitions of "intergovernmental organization" and "international organization" need to change and be defined in a wider manner. In this publication the legal implications of membership are analyzed and a new analytical framework for international organizations is proposed. The argument is propounded that the power of creation of new organizations has passed over to international organizations and other entities while an outlook on future development is also presented. Dr. Gerd Droege is a recognized specialist in institutional law, international administrative law, complex institutional and financial policy matters and corporate governance issues, with over 30 years of experience in working for international organizations in senior and management positions. He was the Legal Counsel/Acting General Counsel of the Green Climate Fund and assisted the World Green Economy Organization as General Counsel in its transition to a new type of intergovernmental organization.
