Reproducibility and Replicability in Science National Academies of Sciences, Engineering, and Medicine 2019-10-20 One of the pathways by which the scientific community confirms the validity of a new scientific discovery is by repeating the research that produced it. When a scientific effort fails to independently confirm the computations or results of a previous study, some fear that it may be a symptom of a lack of rigor in science, while others argue that such an observed inconsistency can be an important precursor to new discovery. Concerns about reproducibility and replicability have been expressed in both scientific and popular media. As these concerns came to light, Congress requested that the National Academies of Sciences, Engineering, and Medicine conduct a study to assess the extent of issues related to reproducibility and replicability and to offer recommendations for improving rigor and transparency in scientific research. Reproducibility and Replicability in Science defines reproducibility and replicability and examines the factors that may lead to non-reproducibility and non-replicability in research. Unlike the typical expectation of reproducibility between two computations, expectations about replicability are more nuanced, and in some cases a lack of replicability can aid the process of scientific discovery. This report provides recommendations to researchers, academic institutions, journals, and

funders on steps they can take to improve reproducibility and replicability in science.

*Instruction in Science* Wilbur Lee Beauchamp 1933

**The Deity and Miracles of Christ** Rev. Joseph Sill 2018-07-26 This book is intended to show Jesus's deity through the signs and dialogue in the book of John. John has recorded eight signs or miracles in his Gospel. He begins with the marriage at Cana and progresses through his Gospel to the resurrection, the greatest of all the signs. These miracles in the book of John, and all the Bible for that matter, are not arbitrary but were chosen by the Holy Spirit to show that Jesus is who he says he is. John himself tells us his purpose in writing his Gospel in John 20:21: "But these are written, that ye might believe that Jesus is the Christ, the Son of God; and that believing ye might have life through his name." This book is intended for you to look at the miracle and sayings of Jesus in John and show how they point to Jesus being the promised Messiah, the Son of God, deity incarnate. John showed who Jesus was when he said, "I am the bread of life," and proceeded to feed the five thousand with the loaves and fish. John records that he said, "I am the light of the world," and then Jesus proceeded to heal a man born blind from birth. He told Mary at the death of Lazarus, "I am the resurrection and the life," and proceeded to raise the dead. Finally, he told his disciples, "I lay my life down, and I will take it up again." Then he went to the cross, died, and was buried to rise again on the third day. And just in case there is any doubt as to his resurrection, he appears to Thomas in the upper room and to the disciples by the sea of Tiberius. It is my prayer that this book may prove who Jesus is to the minds of all who read it. That they may come to believe that Jesus is who he said he is—"the Messiah, the Son of God, who died for our sins"—and is raised to make it just as if we never sinned (Romans 4:25).

**Concepts of Biology** Samantha Fowler 2018-01-07 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

Using Test Data for Student Achievement Nancy W. Sindelar 2011-11-11 Schools are drowning in test data, but many schools do little with test results other than sort students into various categories of proficiency or lack thereof. Some educators feel testing has taken the joy out of teaching. Others believe valuable instructional time has been lost as a result of testing. Yet, NCBL and other federal and state mandates have placed educators under increasing pressure to make certain all students meet standards on high-stakes tests. Now, more than ever, teachers and administrators need to embrace testing as a valuable classroom tool to guide instruction, use efficient technological resources available for test scoring and analysis, and profit from the benefits of test analysis to increase learning and achievement. Using Test Data for Student Achievement shows educators, step by step, how to use test data to facilitate student learning. The book combines research, technology and Sindelar's experience as a

teacher and administrator to provide practical and efficient ways to use test data to increase learning, close achievement gaps and even raise test scores.
