This approach generally led to defining the objectives for applications of medical informatics. At the end of each chapter, the author summarizes his personal views and interpretations of the chapter contents. Although the concurrent evolution of medical informatics in Canada, Europe, and Japan certainly influenced workers in the United States, the scope of this historical review is limited to the development of medical informatics within the United States. Women in Modern Albania Susan E. Pritchett Post 1998 Upon her arrival in Tirana, Albania, in April 1994, the author found a city unlike any other she had experienced. Rotting trash was piled in the center of the streets, animals shared the rutted roads with cars, and housing, when it could be found, was crowded and crumbling. But she found a people full of optimism, particularly the women. Despite the subservient role forced by tradition on nearly all Albanian women, they have increasingly become the foundation upon which the country exists. Not only are they responsible for caring for extended households, these women are now also becoming vital parts of the country's economy. Most importantly, however, they maintain a faith in Albania that belies the country's turbulent past and widely predicted future. Through interviews with over 200 Albanian women, this work is an insightful, often poignant, look at a country that remains a mystery to most in the West.

Julie Lemprière, University of Gloucestershire Key Concepts in Public Health identifies fifty key concepts used across the discipline of public health in order to give the reader a broad perspective of the core topics relevant to training and practice. From epidemiology to health promotion, and ethics to leadership, the book offers an exciting guide to the multiprofessional field.
