Foundations of Sensation and Perception George Mather 2016-08-12 Do you wonder how movies – sequences of static frames – appear to move, or why 3-D films look different from traditional movies? Why does ventriloquism work, and why can airliner flights make you feel disoriented? The answers to these and other questions about the human senses can be found within the pages of Foundations of Sensation and Perception. This third edition maintains the standard for clarity and accessibility combined with rigor which was set in previous editions, making it suitable for a wide range of students. As in the previous editions, the early chapters allow students to grasp fundamental principles in relation to the relatively simple sensory systems (smell, taste, touch and balance) before moving on to more complex material in hearing and vision. The text has been extensively updated, and this new edition includes: a new chapter devoted to attention and perception over 200 new references over 30 new figures and improved, more colorful, visual presentation a new companion website with a range of resources for students and lecturers The book contains a range of pedagogical features, including tutorial sections at the end of each chapter. This distinctive feature introduces areas of the subject which are rarely included in student texts, but are crucial for establishing a firm foundation of knowledge. Some tutorials are devoted to more advanced and technical topics (optics, light measurement, Bayesian inference), but treated in an accessible manner, while others cover topics a little outside of the mainstream (music perception, consciousness, visual art). Foundations of Sensation and Perception will enable the reader to achieve a firm grasp of current knowledge concerning the processes that underlie our perception of the world and will be an invaluable resource for those studying psychology, neuroscience, and related disciplines.

Astrobiology: Future Perspectives P. Ehrenfreund 2006-03-05 Astrobiology, a new exciting interdisciplinary research field, seeks to unravel the origin and evolution of life wherever it might exist in the Universe. The current view of the origin of life on Earth is that it is strongly connected to the origin and

evolution of our planet and, indeed, of the Universe as a whole. We are fortunate to be living in an era where centuries of speculation about the two ancient and fundamental problems: the origin of life and its prevalence in the Universe are being replaced by experimental science. The subject of Astrobiology can be approached from many different perspectives. This book is focused on abiogenic organic matter from the viewpoint of astronomy and planetary science and considers its potential relevance to the origins of life on Earth and elsewhere. Guided by the review papers in this book, the concluding chapter aims to identify key questions to motivate future research and stimulate astrobiological applications of current and future research facilities and space missions. Today's rich array of new spacecraft, telescopes and dedicated scientists promises a steady flow of discoveries and insights that will ultimately lead us to the answers we seek.

Transatlantic Relations Since 1945 Jussi M. Hanhimäki 2012 Transatlantic Relations Since 1945 offers a comprehensive account of transatlantic relations in the second half of the 20th century (extending to the present-day). The transatlantic relationship has been the bedrock of international relations since the end of World War II. This new textbook will focus on the period since the defeat of Nazi Germany, when the multitude of links between United States and Western Europe were created, extended, and multiplied. Written in an

accessible style, it emphasizes transatlantic interactions, and avoids the temptation to focus on either U.S. 'domination' or European attempts to 'resist' an American effort to subjugate the old continent. That influence has travelled across the Atlantic in both directions is one of the starting points of this text. Structured chronologically, the book will be built around three key themes: Security: From the Cold War to the War on Terror Economics: Integration and Competition 'Soft power' and Transatlantic Relations. This book will be of great interest to students of transatlantic relations, NATO, US Foreign Policy, Cold War History, European History and IR/International history.
