**Philosophical Issues in Psychiatry IV** Kenneth S. Kendler 2017-04-06 The revisions of both DSM-IV and ICD-10 have again focused the interest of the field of psychiatry and clinical psychology on the issue of nosology. This interest has been further heightened by a series of controversies associated with the development of DSM-5 including the fate of proposed revisions of the personality disorders, bereavement, and the autism spectrum. Major debate arose within the DSM process about the criteria for changing criteria, leading to the creation of first the Scientific Review Committee and then a series of other oversight committees which weighed in on the final debates on the most controversial proposed additions to DSM-5, providing important influences on the final decisions. Contained within these debates were a range of conceptual and philosophical issues. Some of these - such as the definition of mental disorder or the problems of psychiatric " - have been with the field for a long time. Others - the concept of epistemic iteration as a framework for the introduction of nosologic change - are quite new. This book reviews issues within psychiatric nosology from clinical, historical and particularly philosophical perspectives. The book brings together a range of distinguished authors - including major psychiatric researchers, clinicians, historians and especially nosologists - including several leaders of the DSM-5 effort and the DSM Steering Committee. It also includes contributions from psychologists with a special interest in psychiatric nosology

and philosophers with a wide range of orientations. The book is organized into four major sections: The first explores the nature of psychiatric illness and the way in which it is defined, including clinical and psychometric perspectives. The second section examines problems in the reification of psychiatric diagnostic criteria, the problem of psychiatric epidemics, and the nature and definition of individual symptoms. The third section explores the concept of epistemic iteration as a possible governing conceptual framework for the revision efforts for official psychiatric nosologies such as DSM and ICD and the problems of validation of psychiatric diagnoses. The book ends by exploring how we might move from the descriptive to the etiologic in psychiatric diagnoses, the nature of progress in psychiatric research, and the possible benefits of moving to a living document (or continuous improvement) model for psychiatric nosologic systems. The result is a book that captures the dynamic cross-disciplinary interactions that characterize the best work in the philosophy of psychiatry.

Psychiatrie im Nationalsozialismus Frank Schneider 2011-10-01 Am 26. November 2010 gedachte die Deutsche Gesellschaft für Psychiatrie, Psychotherapie und Nervenheilkunde (DGPPN) der Menschen, die während des Nationalsozialismus Opfer von nicht zu rechtfertigender Forschung wurden, die zwangssterilisiert oder aufgrund ihrer psychischen Erkrankung ermordet wurden sowie der Psychiater, die zur Emigration gezwungen wurden. Herausgegeben vom DGPPN-Präsidenten wird in dem Band die Geschichte der Psychiatrie in der NS-Zeit dargestellt (Deutsch-Englisch). Inklusive Mitschnitt der Gedenkveranstaltung auf DVD.

*Psychosomatic Medicine* Franz Alexander 1965-04-01 A pioneer in the field of psychoanalysis and psychosomatic medicine describes the fundamental concepts on which the psychosomatic approach is based and presents the results of study concerning the influence of emotions on bodily processes in health and disease. Dr. Alexander draws a clear picture of the psychological factors involved in a body process and shows that these factors must receive the same detailed scrutiny as the physiological processes.
