Sketching User Experiences: Getting the Design Right and the Right Design Bill Buxton 2010-07-28 Sketching User Experiences approaches design and design thinking as something distinct that needs to be better understood—by both designers and the people with whom they need to work— in order to achieve success with new products and systems. So while the focus is on design, the approach is holistic. Hence, the book speaks to designers, usability specialists, the HCI community, product managers, and business executives. There is an emphasis on balancing the back-end concern with usability and engineering excellence (getting the design right) with an up-front investment in sketching and ideation (getting the right design). Overall, the objective is to build the notion of informed design: molding emerging technology into a form that serves our society and reflects its values. Grounded in both practice and scientific research, Bill Buxton’s engaging work aims to spark the imagination while encouraging the use of new techniques, breathing new life into user experience design. Covers sketching and early prototyping design methods suitable for dynamic product capabilities: cell phones that communicate with each other and other embedded systems, "smart" appliances, and things you only imagine in your dreams Thorough coverage of the design sketching method which helps easily build experience prototypes—without the effort of engineering prototypes which are difficult to abandon Reaches out to a range of designers, including user interface designers, industrial designers, software engineers, usability engineers, product managers, and others Full of case studies, examples, exercises, and projects, and access to video clips that demonstrate the principles and methods

50 Ways to Draw Your Beautiful, Ordinary Life Irene Smit 2018-04-17 Draw the Flow Way “Create whatever causes a revolution in your heart.” -Elizabeth Gilbert “I cannot rest, I must draw, however poor the result, and when I have a bad time come over me it is a stronger desire than ever.” -Beatrix Potter “Drawing, painting, creating...it’s like a muscle. You have to work on it every day.” -Sarah Walsh “Draw the art you want to see, start the business you want to run, play the music you want to hear, write the books you want to read, build the products you want to use—do the work you want to see done.” -Austin Kleon “Drawing is the discipline by which I constantly rediscover the world. I have learned that what I have not drawn, I have never really seen, and that when I start drawing an ordinary thing, I realize how extraordinary it is, sheer miracle.” -Frederick Frank “Have no fear of perfection, you’ll never reach it.” -Salvador Dalí “Creativity is a way of living life, no matter what our vocation

or how we earn our living.” -Madeline L’Engle “I believe the most important single thing, beyond discipline and creativity, in any artistic work, is daring to dare.” -Maya Angelou “I sometimes think that there is nothing so delightful as drawing.” -Vincent van Gogh In this innovative approach to drawing instruction, the illustrators from Flow magazine open up their tool kits, sharing secrets and techniques to teach the creatively curious how to draw. The lessons, 50 in all, curated from the best of Flow's two special drawing issues, show how to render the kinds of things we see every day: a bouquet of flowers, a beloved teacup, colorful mittens, the kitchen table, a bike, jam jars, a cat, an apple tree. Along the way we learn about color, materials, perspective, tools, and negative space. Field Sketching and the Experience of Landscape Janet Swailes 2016-06-17 The act of field sketching allows us to experience the landscape first-hand - rather than reliance upon plans, maps and photographs at a distance, back in the studio. Aimed primarily at landscape architects, Janet Swailes takes the reader on a journey through the art of field sketching, providing guidance and tips to develop skills from those starting out on a design course, to those looking to improve their sketching. Combining techniques from landscape architecture and the craft and sensibilities of arts practice, she invites us to experience sensations directly out in the field to enrich our work: to look closely at the effects of light and weather; understand the lie and shapes of the land through travel and walking; and to consider lines of sight from the inside out as well as outside in. Full colour throughout with examples, checklists and case studies of other sketchers' methods, this is an inspirational book to encourage landscape architects to spend more time in the field and reconnect with the basics of design through drawing practice.

Drawdown Paul Hawken 2017-04-18 • New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world “At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope.” —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, Vox “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path

forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.
