Computational Methods for the Study of Dynamic Economies Ramon Marimon 1999-03-04 Macroeconomics increasingly uses stochastic dynamic general equilibrium models to understand theoretical and policy issues. Unless very strong assumptions are made, understanding the properties of particular models requires solving the model using a computer. This volume brings together leading contributors in the field who explain in detail how to implement the computational techniques needed to solve dynamic economics models. A broad spread of techniques are covered, and their application in a wide range of subjects discussed. The book provides the basics of a toolkit which researchers and graduate students can use to solve and analyse their own theoretical models.

The Transition in Eastern Europe, Volume 1 Olivier Jean Blanchard 2008-04-15 When communism fell in 1989, the question for most Eastern European countries was not whether to go to a market economy, but how to get there. Several years later, the difficult process of privatization and restructuring continues to concern the countries of the region. *The Transition in Eastern Europe, Volumes 1 and 2* is an analysis of the experiences of various countries making the transition to market economies and examines the most important challenges still in store. Volume 1, *Country Studies*, gives an in-depth, country-by-country analysis of various reform experiences, including historical backgrounds and discussions of policies and results to date. The countries analyzed are Poland, Czechoslovakia, Hungary, eastern Germany, Slovenia, and Russia. Written by leading economists, some of whom helped shape local and national reforms, this volume identifies common progress, common difficulties, and tentative solutions to the problems of economic transition. Volume 2, *Restructuring*, focuses on specific issues of transition, including how to design labor market institutions, privatization, new fiscal structures, and bankruptcy laws; how to reorganize foreign trade; and how to promote foreign direct investment. The articles, written by experts in the field, will be of direct help to those involved in the transition process. These volumes provide a standard reference on economic transition in the region for policymakers in Eastern Europe and in western countries, for international agencies concerned with the transition process, and for anyone interested in learning about the dramatic changes that have recently occurred in Eastern Europe.

**Pearson FlexText, Microeconomics** 2018-04-30 Pearson FlexText ...setting you up for success in school and at work The study of economics requires a different style of thinking from what you may encounter in other courses. Economists make extensive use of assumptions to break down complex problems into simple, analytically manageable parts. This analytical style, while not ultimately more demanding than the styles of thinking in other disciplines, feels unfamiliar to most students and requires practice. Our experience has taught us that what first-year economics students want most from a FlexText is help in mastering course material to do well on examinations. We have developed this FlexText to respond specifically to that demand.
