EMI/EMC Computational Modeling Handbook Bruce R. Archambeault 2013-04-17 The application of computational electromagnetics to practical EMI/EMC engineering is an emerging technology. Because of the increased complexity in EMI/EMC issues resulting from advancements in electronics and telecommunications, it is no longer possible to rely exclusively on traditional techniques and tools to solve the growing list of electronic engineering design problems. EMI/EMC Computational Modeling Handbook introduces modeling and simulation of electromagnetics to real-world EMI/EMC engineering. It combines the essentials of electromagnetics, computational techniques, and actual EMI/EMC applications. Included are such popular full-wave computational modeling techniques as the Method of Moments, Finite-Difference Time Domain Technique, Finite Element Method, and several others. The authors have included a myriad of applications for computers, telecommunications, consumer electronics, medical electronics, and military uses. EMI/EMC Computational Modeling Handbook is an invaluable reference work for practicing EMI/EMC engineers, electronic design engineers, and any engineer involved in computational electromagnetics.

The Cornbread Mafia James Higdon 2019-05-01 In the summer of 1987, Johnny Boone set out to grow and harvest one of the greatest outdoor marijuana crops in modern times. In doing so, he set into motion a series of events that defined him and his associates as the largest homegrown marijuana syndicate in American history, also known as the Cornbread Mafia. Author James Higdon—whose relationship with Johnny Boone, currently a federal fugitive, made him the first journalist subpoenaed under the Obama administration—takes readers back to the 1970s and '80s and the clash between federal and local law enforcement and a band of Kentucky farmers with moonshine and pride in their bloodlines. By 1989 the task force assigned to take down men like Johnny Boone had arrested sixty-nine men and one woman from busts on twenty-nine farms in ten states, and seized two hundred tons of pot. Of the seventy individuals arrested, zero talked. How it all went down is a tale of Mafia-style storylines emanating from the Bluegrass State, and populated by Vietnam veterans and weed-loving characters caught up in Tarantino-level violence and heart-breaking altruism. Accompanied by a soundtrack of rock-and-roll and rhythm-and-blues, this work of dogged investigative journalism and history is told by Higdon in action-packed, colorful and riveting detail.

The Anatomy of Fake News Nolan Higdon 2020-08-04 Since the 2016 U.S. presidential election, concerns about fake news have fostered calls for government regulation and industry intervention to mitigate the influence of false content. These proposals are hindered by a lack of consensus concerning the definition of fake news or its origins. Media scholar Nolan Higdon contends that expanded access to critical media literacy education, grounded in a comprehensive history of fake news, is a more promising solution to these issues. The Anatomy of Fake News offers the first historical examination of fake news that takes as

its goal the effective teaching of critical news literacy in the United States. Higdon employs a critical-historical media ecosystems approach to identify the producers, themes, purposes, and influences of fake news. The findings are then incorporated into an invaluable fake news detection kit. This much-needed resource provides a rich history and a promising set of pedagogical strategies for mitigating the pernicious influence of fake news.

Approximations and Numerical Methods for the Solution of Maxwell's Equations Institute for Mathematics and Its Applications 1998 This book was written in response to the increasing interest in the high frequency numerical solution of Maxwell's equations. Research activity in this area has been stimulated by requirements for greater precision in radar cross-section calculations, particularly for geometries with lowobservability; however there are also a growing number of applications in bio-electromagnetism and electromagnetic compatibility. It is hoped that these proceedings will be of interest both to specialists in this area as well as to others simply looking for a guide to recent developments.

Summary of Ray & Jessica Higdon's Time, Money, Freedom Everest Media, 2022-05-13T22:59:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 The only way to be secure and dependable is to be your own boss. This means having control over your life and the ability to support yourself and your family on your own terms. #2 A home business gives you security and allows you to live the life you want. It allows you to make decisions that are best for you, not someone else. It gives you the opportunity to go as far as you want to on your terms. #3 Ray's road to success was not an easy one. He struggled with doubt about his self-worth, which is understandable given what he went through as a child. But he never wanted to be complacent in any area of his life. #4 Ray's story is similar to Jess's. He was working his way through college while working at a department store makeup counter. He wanted to use his marketing degree, but he didn't want to settle for a dead end job.

A Celebration of Mathematical Modeling Dan Czamanski 2013-03-09

This volume celebrates the eightieth birthday of Joseph B. Keller. The authors who contributed to this volume belong to what can be called the "Keller school of applied mathematics." They are former students,

postdoctoral fellows and visiting scientists who have collaborated with Joe (some of them still do) during his long career. They all look at Joe as their ultimate (role) model.

Joe Keller's distinguished career has been divided between the Courant Institute of Mathematical Sciences at New York University, where he received all his degrees (his PhD adviser being the great R. Courant himself) and served as a professor for 30 years, and Stanford University, where he has been since 1978. The appended photos highlight some scenes from the old days. Those who know Joe Keller's work have been always amazed by its diversity and breadth. It is considered a well-known truth that there is not a single important area in applied mathematics or physics which Keller did not contribute to. This can be appreciated, for example, by glancing through his list of publication included in this volume. Appropriately, the papers in this book, written with Joe's inspiration, cover a variety of application areas; together they span the broad subject of mathematical modeling. The models discussed in the book describe the behavior of various systems such as those related to finance, waves, microorganisms, shocks, DNA, flames, contact, optics, fluids, bubbles and jets. Joe's activity includes many more areas, which unfortunately are not represented here.

Efficient Solution of Maxwell's Equations Using the Nonuniform Orthogonal Finite Difference Time Domain Method John Allan Svigelj 1995 The Finite Difference Time Domain (FDTD) method is limited by memory requirements and computation time when applied to large problems, complicated geometries, or geometries with fine features. In this thesis, the nonuniform orthogonal FDTD method is presented and applied to a variety of electromagnetic problems. The nonuniform aspect of the method gives great flexibility in modeling complicated geometries with fine features. Furthermore, the variability of the mesh resolution also enables the user to move the boundaries of the computational domain farther away from the center of the problem without an undue increase in the number of cells. Most significantly, the orthogonality of the method preserves the speed of the conventional FDTD method. These three features of the nonuniform orthogonal FDTD method are demonstrated by means of numerical examples throughout the thesis. Grid dispersion error from the nonuniform mesh is analyzed and numerical examples are presented, demonstrating that small growth rates in mesh discretization lead to acceptably small errors. The issue of absorbing boundary conditions is addressed with the analysis and application of the dispersive boundary condition on nonuniform meshes. New techniques are also introduced for the efficient characterization of microstrip lines, microstrip discontinuities, and coupled microstrip structures using FDTD data. A local mesh refinement technique is introduced for planar perfect electric conductor, and is shown to be three times more accurate than the staircasing approximation. The versatility of the method is demonstrated by the analysis of a balun-fed folded dipole antenna, the characterization of the transition of grounded coplanar waveguide to microstrip line, and the study of fields in lossy layered media.

Modern Studies in Property Law - Warren Barr 2015-08-27 This book contains a collection of peer-reviewed papers presented at the Tenth Biennial Modern Studies in Property Law Conference held at the

University of Liverpool in April 2014. It is the eighth volume to be published under the name of the Conference. The Conference and its published proceedings have become an established forum for property lawyers from around the world to showcase current research in the discipline. This collection reflects the diversity and contemporary relevance of modern research in property law. Incorporating a keynote address by Sir John Mummery, retired Lord Justice of Appeal, on 'Property in the Information Age', a number of chapters consider the contribution of property law to issues central to the human condition; the home, health and death. Other papers illustrate an enduring need to question and explore fundamental concepts of the subject as well as to consider the challenges of reforming the law. Collectively the chapters demonstrate the vibrancy and importance of property law in dealing with modern concerns across the common law world.

Flow-Induced Alignment in Composite Materials T D Papathanasiou 1997-10-21 The purpose of aligning short fibres in a fibre-reinforced material is to improve the mechanical properties of the resulting composite. Aligning the fibres, generally in a preferred direction, allows them to contribute as much as possible to reinforcing the material. Flow induced alignment in composite materials details, in a single volume, the science, processing, applications, characterisation and properties of composite materials reinforced with short fibres that have been orientated in a preferred direction by flows arising during processing. The topics discussed include fibre alignment and materials rheology; processes that can produce fibre alignment in polymeric, liquid crystal polymeric, and metallic composites; materials characterization and mechanical properties; and modelling of processes and materials properties. The technology of fibre-reinforced composites is continually evolving and this book provides timely and much needed information about this important class of engineering materials. The book is an essential reference work for industry and an indispensable guide for the research worker, advanced student and materials scientist.

Slow Viscous Flows: Qualitative Features And Quantitative Analysis Using Complex Eigenfunction Expansions (With Cd-rom) P N Shankar 2007-09-28 This unique book provides a unified and systematic account of internal, external and unsteady slow viscous flows, including the latest advances of the last decade, some of which are due to the author. The book shows how the method of eigenfunctions, in conjunction with least squares, can be used to solve problems of low Reynolds number flows, including three-dimensional internal and unsteady flows, which until recently were considered intractable. Although the methods used are quantitative, much stress is laid on understanding the qualitative nature of these intriguing flows. A secondary purpose of the book is to explain how the complex eigenfunction method can be used to solve problems in science and engineering. Although primarily aimed at graduate students, academics and research engineers in the areas of fluid mechanics and applied mathematics, care has been taken, through the use of numerous diagrams and much discussion, to explain to the non-specialist the qualitative features of these complex flows./a

The Very Marrow of Our Bones Christine Higdon 2018-04-03 Defiance, faith, and triumph in a heartrending novel about daughters and mothers On a miserable November day in 1967, two women disappear from a working-class town on the Fraser River. The community is thrown into panic, with talk of drifters and murderous husbands. But no one can find a trace of Bette Parsons or Alice McFee. Even the egg seller, Doris Tenpenny, a woman to whom everyone tells their secrets, hears nothing. Ten-year-old Lulu Parsons discovers something, though: a milk-stained note her mother, Bette, left for her father on the kitchen table. Wally, it says, I will not live in a tarpaper shack for the rest of my life . . . Lulu tells no one, and months later she buries the note in the woods. At the age of ten, she starts running — and forgetting — lurching through her unraveled life, using the safety of solitude and detachment until, at fifty, she learns that she is not the only one who carries a secret. Hopeful, lyrical, comedic, and intriguingly and lovingly told, *The Very Marrow of Our Bones* explores the isolated landscapes and thorny attachments bred by childhood loss and buried secrets.

Advanced Computational Methods and Experiments in Heat Transfer X Bengt Sundén 2008-06-19 In engineering design and development, reliable and accurate computational methods are requested to replace or complement expensive and time consuming experimental trial and error work. Tremendous advancements have been achieved during recent years due to improved numerical solutions of non-linear partial differential equations and computer developments to achieve efficient and rapid calculations. Nevertheless, to further progress in computational methods will require developments in theoretical and predictive procedures – both basic and innovative – and in applied research. Accurate experimental investigations are needed to validate the numerical calculations. This book contains the edited versions of the papers presented at the Tenth International Conference on Advanced Computational Methods and Experimental Measurements in Heat Transfer and Mass Transfer held in Maribor, Slovenia in July 2008. The objective of this conference series is to provide a forum for presentation and discussion of advanced topics, new approaches and application of advanced computational methods and experimental measurements to heat and mass transfer problems. The contributed papers are grouped in the following appropriate sections to provide better access for readers: Natural and forced convection; Heat exchangers; Advances in computational methods; Heat recovery; Heat transfer; Modelling and experiments.
