Gendering European Integration Theory Gabriele Abels 2016-05-23 The authors engage a dialogue between European integration theories and gender studies. The contributions illustrate where and how gender scholarship has made creative use of integration theories and thus contributes to a vivid theoretical debate. The chapters are designed to make gender scholarship more visible to integration theory and, in this way stimulates the broader theoretical debates. Investigating the whole range of integration theory with a gender lens, the authors illustrate if and how gender scholarship has made or can make creative use of integration theories.

The Problem with Breastfeeding James Akre 2006 What indeed is the problem with breastfeeding and who's responsible for solving it? Is it a conflict between mothers and babies, health professionals and patients, what's good for people and what's good for business? Or is there something more? Who's winning the Formula War and on whose side are governments anyway? Who are the synthetic dream merchants and how can they be checked? How do the media shape our perceptions? These are just a few of the directions James Akre takes us in his reflection on that defining characteristic of our species ? the nurturing and nutritional strategy called breastfeeding ? which he describes as ?an elemental act of allegiance to ourselves and to our children?. As both observer and actor on the international development scene for four decades, he reminds us of a constant across time and geography: all mothers love their babies and want what's best for them. He challenges

us to deconstruct infant formula by removing it from its unjustified nutritional pedestal. And he invites us to join him in the International Breastfeeding Support Collective. The author notes that we all arrive in this world in a similar fashion, yet all bets are quickly off. Culture takes over as we start the process of becoming who we are based on the rules of the group into which we're born. In contemplating the contemporary child-feeding horizon, he concludes that many do not understand the multiple dangers of the deviant behavior that is routine non-emergency artificial feeding. But he's optimistic that a major improvement in child-feeding practices is possible within a generation provided we alter the complex value system which determines whether society engages in more or less breastfeeding. To this end, the author takes an unconventional look at breastfeeding's cross-cultural commonalities and differences, and suggests what we might do to change thinking and improve practice. In his view the highest hurdles to more and longer breastfeeding are not scientific or epidemiological but political, sociocultural, economic and organizational. He's convinced that embracing breastfeeding automatically places us on the right side of history.

Immunobiology of Human Milk Lars A. Hanson 2004-01-01 Immunobiology of Human Milk provides a thorough understanding of the wondrous biology of the immune components in human milk and how they protect the breastfed infant. In this book, Dr. Hanson describes the elaborate systems that have developed to protect the infant against infections and to promote the infant's growth and neurodevelopment. Dr. Hanson has been studying the immunobiology of breastmilk since 1955, publishing 650 scientific papers and editing/contributing to 19 books. He is one of the most highly respected immunobiologists/pediatricians in the world. Features included in this book include the bacterial colonization of the newborn, components of host defense, host defense of the growing baby, the pregnant mother's support of host defense in the fetus, the breastfeeding mother's support of host defense, protection against disease provided by breastfeeding, and infectious agents in breastmilk and their impact on breastfeeding.

Breastfeeding the Newborn Marie Biancuzzo 2003 This practical resource provides the scientific basis and the "how-to" techniques to help the mother establish a milk supply and to confirm that the newborn is breastfeeding successfully before discharge. Promoting breastfeeding at the personal, interpersonal, and system levels, this second edition delivers evidence-based care across the health-illness continuum. Brief overviews of pathophysiology are included to enable readers to quickly develop physical assessment skills, make practical recommendations to the mother, and verify that the recommendations achieved the desired results. Clinical case scenarios help the reader think through realistic situations to generate possible management strategies. Easy-to-read content supports breastfeeding promotion during pregnancy and offers practical tips for breastfeeding management during the first

month of life. Actual clinical scenarios are included to stimulate critical thinking and breastfeeding management strategies. Interviewing techniques and physical assessment guidelines are provided to enhance breastfeeding initiation and continuation. Strategies to support breastfeeding for multiple or preterm births are offered. Research Highlights discuss key studies related to the clinical area. A new chapter on Strategies for Breastfeeding the Preterm Newborn presents important issues and concerns related to this critical time in the newborn's life. Expanded information on Disease Implications and Risks-Benefits of Pharmacologic and Herbal Therapies stresses the importance of understanding therapeutic care alternatives and their implications for successful breastfeeding.

Tobacco Smoke and Involuntary Smoking IARC Working Group on the Evaluation of Carcinogenic Risks to Humans 2004 The IARC Monographs series publishes authoritative independent assessments by international experts of the carcinogenic risks posed to humans by a variety of agents, mixtures and exposures. They are a resource of information for both researchers and national and international authorities. This volume is particularly significant because tobacco smoke not only causes more deaths from cancer than any other known agent; it also causes more deaths from vascular and respiratory diseases. This volume contains all the relevant information on both direct and passive smoking. It is organised by first looking at the nature of agent before collecting the evidence of cancer in humans. This is followed by carcinogenicity studies on animals and then any other data relevant to an evaluation.

Leadership Lessons: Henry Ford Will Peters 2018-01-17 Henry Ford was perfectly tuned to his times. He made sturdy, practical cars that everyone could afford and drive. His moving assembly line slashed the cost of production. His network of franchised dealers nurtured car ownership and promoted gas stations and better roads. But when his time passed, he couldn't adapt to the world he had helped make. Here, in this short-form book by bestselling author and consultant Will Peters, is the story of this deeply flawed genius, with lessons for entrepreneurs and leaders alike.

Human Lactation 3 A.S. Goldman 2013-11-11 Four years ago the National Institutes of Child Health and Human Development (NICHD) brought together a group of scientists to Belmont, Maryland to examine the status of human milk banking. During those deliberations, the idea was generated to organize a series of research conferences concerning human lactation and the composition and biological effects of human milk. The first one, organized by Robert G. Jensen from the University of Connecticut and Margaret C. Neville from the University of Colorado, dealt with methodologic issues. An additional meeting to explore the effects of maternal and environmental factors upon human lactation and the composition of human milk was organized by Margit Hamosh from Georgetown University and me, and was held in January, 1986 in Oaxaca, Mexico. Those meetings provided the foundation for the design of the present conference, 'The Effects of Human Milk Upon the Recipient Infant'. In addition to a grant from the NICHD, the conference was generously supported by Milupa AG from the Federal Republic of Germany; Wyeth Limited and Mead Johnson of Canada; and Ross Laboratories, Heinz USA, the Mead Johnson Nutritional Group, Wyeth International Limited, Gerber Products Company, the La Leche League International, Glaxo Incorporated and Sandoz Pharmaceutical Corporation from the United States.

Mobile Living Across Europe II Norbert F. Schneider 2010-09-15 Job-related spatial mobility is a subject of great importance in Europe. But how mobile are the Europeans? What are the consequences of professional mobility for quality of life, family life and social relationships? For the first time these questions are analysed on the basis of the data of a large-scale European survey. This volume analyses the causes and determinants of job mobility and their individual and societal consequences in cross-national comparison.

Täglich grüßt das Schuldgefühl Michele Liussi 2022-09-15 Habe ich mein Kind zu kurz gestillt? Schimpfe ich zu viel? Darf ich krank sein? Bin ich zu früh wieder arbeiten gegangen?

Lasse ich mein Kind zu viel vor dem Bildschirm sitzen? Bin ich als Partnerin noch attraktiv? Mütter tun meist alles für ihre Familie - und haben dennoch ein schlechtes Gewissen. Dieser Ratgeber räumt mit den belastenden Denkmustern auf und liefert praktisch und alltagsnahe Unterstützung, damit Mütter ihre Schuldgefühle loswerden können: Sich selbst, ihrem Kind, ihrem Partner, aber auch der Gesellschaft gegenüber. Die Autorinnen bringen alle typischen Situationen auf den Punkt, in denen Mütter häufig ein schlechtes Gewissen entwickeln - und bieten einen Ausweg, der sich auch mit dem Familienalltag vereinbaren lässt.

Supporting Sucking Skills in Breastfeeding Infants Catherine Watson Genna 2012-02-23
Important Notice: The digital edition of this book is missing some of the images or content found in the physical edition. Supporting Sucking Skills in Breastfeeding Infants, Second Edition is the essential resource for healthcare professionals working with new mothers and infants. Using a skills approach, it focuses on normal sucking function in addition to anatomical variations, developmental respiratory issues, prematurity, and mild neurological deficits. Completely updated and revised with new photos and images, this edition contains a new chapter, "Hands in Support of Breastfeeding: Manual Therapy." Written by an internationally renowned IBCLC and deliberately multidisciplinary, it provides the entire team with both the research background and clinical strategies necessary to help infants with successful sucking and feeding.

Dieses Buch gibt Sicherheit und kompetente Antworten auf alle wichtigen Fragen.

The Attachment Parenting Book William Sears 2001-09-01 America's foremost baby and childcare experts, William Sears M.D. and Martha Sears, R.N., explain the benefits -- for both you and your child -- of connecting with your baby early. Would you and your baby both sleep better if you shared a bed? How old is too old for breastfeeding? What is a father's role in nurturing a newborn? How does early attachment foster a child's eventual independence? Dr. Bill and Martha Sears -- the doctor-and-nurse, husband-and-wife team who coined the term "attachment parenting" -- answer these and many more questions in this practical, inspiring guide. Attachment parenting is a style of parenting that encourages a strong early attachment, and advocates parental responsiveness to babies' dependency needs. The Attachment Parenting Book clearly explains the six "Baby B's" that form the basis of this

popular parenting style: Bonding, Breastfeeding, Babywearing, Bedding close to baby, Belief in the language value of baby's cry, and Beware of baby trainers. Here's all the information you need to achieve your most important goals as a new parent: to know your child, to help your child feel right, and to enjoy parenting.

New to this Edition: Many new drugs, vaccines, herbals, and chemicals. Major updates to existing drug monographs. New tables to compare and contrast the suitability of psychiatric medications. New table to compare and contrast pain medications. Updated table and new monograph on hormonal contraception. If you work with breastfeeding mothers, this book is an essential tool to use in your practice.

Breastfeeding Patricia Stuart-Macadam 2017-09-29 Breastfeeding is a biocultural phenomenon: not only is it a biological process, but it is also a culturally determined behavior. As such, it has important implications for understanding the past, present, and future condition of our species. In general, scholars have emphasized either the biological or the cultural aspects of breastfeeding, but not both. As biological anthropologists the editors of this volume feel that an evolutionary approach combining both aspects is essential. One of the goals of their book is to incorporate data from diverse fields to present a more holistic view of breastfeeding, through the inclusion of research from a number of different disciplines, including biological and social/cultural anthropology, nutrition, and medicine. The resulting book, presenting the complexity of the issues surrounding very basic decisions about infant nutrition, will fill a void in the existing literature on breastfeeding.

Breastfeeding Older Children Ann Sinnott 2009 Is long-term breastfeeding nature's way or an unhealthy practice? Is it a form of sexual abuse? Do controlling mothers coerce children into continuing, or are they meeting the child's innate need? Does sustained breastfeeding impact negatively on child physical and emotional health, or does it have a positive effect? Do mothers pay a price? Does the practice affect the couple relationship? Does truncated breastfeeding leave emotional wounds, and do men especially suffer? When did early weaning become established practice in the western world? Is sustained breastfeeding a feminist issue? Drawing on child development theories, neuroscience research, archaeological and anthropological findings, *Breastfeeding Older Children* explores the myths and reality of this taboo practice. In survey questionnaire extracts, from 48 countries, the voices of mothers, fathers and children also speak out.

Global Strategy for Infant and Young Child Feeding Organisation mondiale de la santé 2003
WHO and UNICEF jointly developed this global strategy to focus world attention on the impact that feeding practices have on the nutritional status, growth and development, health, and thus the very survival of infants and young children. The strategy is the result of a comprehensive two-year participatory process. It is based on the evidence of nutrition's significance in the early months and years of life, and of the crucial role that appropriate feeding practices play in achieving optimal health outcomes. The strategy is intended as a guide for action; it identifies interventions with a proven positive impact; it emphasizes providing mothers and families the support they need to carry out their crucial roles, and it explicitly defines the obligations and responsibilities in this regards of governments, international organizations, and other concerned parties.

Making Prevention Work 1995

Lactation Margaret Neville 2013-11-11 This book had its genesis in the frustrations of the editors in locating authoritative, up-to-date material for an interdisciplinary graduate course in mammary gland biology, lactation, and breast-feeding. As we turned to the original literature several reasons for the dearth of usable material became clear: (1) In the areas of mammary gland biology and physiology, particularly as they relate to the human, reviews simply have not kept up with current research, which has in the last two decades provided tremendous insight into the mechanisms of milk secretion and its control. (2) The lack of interest in human milk as infant food inhibited researchers until very recently from investigating human lactation. (3) Much of the relevant clinical information remains anecdotal with little scientific basis. In this book we have tried to present the fundamentals of mammary gland physiology at the organismic and cellular levels in a form readily understood by physicians, scientists, and other professionals. This basic information is accompanied by authoritative reviews of the nutritional and immunological properties of human milk and by clinically relevant chapters designed to help health care professionals deal with the medical problems of the breast-feeding mother and her infant. We have strived in these chapters for up-to-date, authoritative, but readable accounts. In so far as possible we have avoided areas where much of our understanding rests on speculation. In the clinical domain this was not always possible because of a lack of solid, scientific information about breast-feeding.

Bottled Up Suzanne Barston 2012-10-18 Discusses the issue of breast feeding and whether it is fair to judge parenting on breast vs. bottle as opposed to making the right choice for a family.

The International Code of Marketing of Breast-Milk Substitutes Who 1996-01-01 Sets out a carefully developed - and extensively tested - methodology for use by authorities in countries when evaluating their action to implement the International Code of Marketing of Breast-milk Substitutes. The framework, which can be adapted as appropriate, offers a standardized method of information and data collection for monitoring progress over time. The Code was adopted in 1981 with the aim of contributing to "the provision of safe and adequate nutrition for infants, by the protection and promotion of breast-feeding and by ensuring the proper use of breast-milk substitutes, when these are necessary, on the basis of adequate information and through appropriate marketing and distribution." During the period 1990-1991, WHO provided technical support to 14 countries that had indicated a desire to undertake an in-depth review and evaluation of their own experiences in giving effect to the Code. During this review, governments used a common review and evaluation framework, prepared by WHO. The original framework has subsequently been revised and expanded in the light of experience and lessons learned in other countries, including field tests in Ecuador and Thailand. The resulting common framework is presented in full detail in this volume, which follows the basic structure of the Code. Each of the eleven articles is covered in separate sections with three parts: a summary of the main focus, a description of critical issues, and suggested key informants. Use of the framework is greatly facilitated through the inclusion of numerous sample questionnaires.
