Work on Myth Hans Blumenberg 1988-03-18 In this rich examination of how we inherit and transform myths, Hans Blumenberg continues his study of the philosophical roots of the modern world. Work on Myth is in five parts. The first two analyze the characteristics of myth and the stages in the West's work on myth, including long discussions of such authors as Freud, Joyce, Cassirer, and Valéry. The latter three parts present a comprehensive account of the history of the Prometheus myth, from Hesiod and Aeschylus to Gide and Kafka. This section includes a detailed analysis of Goethe's lifelong confrontation with the Prometheus myth, which is a unique synthesis of "psychobiography" and history of ideas. Work on Myth is included in the series Studies in Contemporary German Social Thought, edited by Thomas McCarthy.

The Conquest of Nature: Water, Landscape, and the Making of Modern Germany David Blackbourn 2007-08-17 "Brilliantly conceived...[A] tour de force in historical writing."—Ian Kershaw Majestic and lyrically written, The Conquest of Nature traces the rise of Germany through the development of water and landscape. David Blackbourn begins his morality tale in the mid-1700s, with the epic story of Frederick the Great, who attempted—by importing the great scientific minds of the West and by harnessing the power of his army—to transform the uninhabitable marshlands of his scattered kingdom into a modern state. Chronicling the great engineering projects that reshaped the mighty Rhine, the emergence of an ambitious German navy, and the development of hydroelectric power to fuel Germany's convulsive industrial growth before World War I, Blackbourn goes on to show how Nazi racial policies rested on German

ideas of mastery of the natural world. Filled with striking reproductions of paintings, maps, and photographs, this grand work of modern history links culture, politics, and the environment in an exploration of the perils faced by nations that attempt to conquer nature.

As German as Kafka Lene Rock 2019-12-10 Since the turn of the 21st century, countless literary endeavors by 'new Germans' have entered the spotlight of academic research. Yet 'minority writing', with its distinctive renegotiation of traditional concepts of cultural identity, is far from a recent phenomenon in German literature. A hundred years previously, the intense involvement of German-Jewish intellectuals in cultural and political discourses on Jewish identity put a clear stamp on German modernism. This book is the first to unfold literary parallels between these two riveting periods in German cultural history. Drawing on the philosophical oeuvre of Jean-Luc Nancy, a comparative reading of texts by, amongst others, Beer-Hofmann, Kermani, Özdamar, Roth, Schnitzler, and Zaimoglu examines a variety of literary approaches to the thorny issue of cultural identity, while developing an overarching perspective on the 'politics of literature'.

Motel of the Mysteries David Macaulay 1979-10-11 It is the year 4022; all of the ancient country of Usa has been buried under many feet of detritus from a catastrophe that occurred back in 1985. Imagine, then, the excitement that Howard Carson, an amateur archeologist at best, experienced when in crossing the perimeter of an abandoned excavation site he felt the ground give way beneath him and found himself at the bottom of a shaft, which, judging from the DO NOT DISTURB sign hanging from an archaic doorknob, was clearly the entrance to a still-sealed burial chamber. Carson's incredible discoveries, including the remains of two bodies, one of them on a ceremonial bed facing an altar that appeared to be a means of communicating with the Gods and the other lying in a porcelain sarcophagus in the Inner Chamber, permitted him to piece together the whole fabric of that extraordinary civilization.

An Autobiography George Grosz 1998-04-17 This acclaimed autobiography by one of the twentieth century's greatest satirical artists is as much a graphic portrait of Germany in chaos after the Treaty of Versailles as it is a memoir of a remarkable artist's development. Grosz's account of a world gone mad is as acute and provocative as the art that depicts it, and this translation of a work long out of print restores the spontaneity, humor, and energy of the author's German text. It also includes a chapter on Grosz's experience in the Soviet Union—omitted from the original English-language edition—as well as more writings about his twenty-year self-imposed exile in America, and a fable written in English.

Terra Incognita Ann O'M. Bowman 2004-04-06 Boon or blight? Ann Bowman and Michael Pagano define "vacant land" broadly, to include everything from brownfields (environmentally contaminated land) through trashed lots and abandoned buildings to greenspace (parks, community gardens, etc.). Terra Incognita takes a fresh look at what they believe can be the ultimate urban resource. Beyond the common studies of the influence of market forces, it explores how these areas are affected by the decisions of local governments, and then shows how vacant land can be a valuable strategic asset for localities. Terra Incognita derives from what—until now—has been the lack of substantial information about the amount and the diversity of urban vacant land. This book is based on an unprecedented survey sent to all U.S. towns with a population greater than 50,000, and contains data previously unavailable. Three cities were studied in greater depth for detailed case studies: the greater Phoenix and Seattle areas and Philadelphia-Camden. A number of other cities are cited frequently, including Boston, Chicago, Detroit, New York, Cleveland, Cincinnati, and Oklahoma City, among many others. Identifying the fiscal, social, and development imperatives that drive the decisions local officials make about using vacant land, Bowman and Pagano pay particular

attention to the varying dynamics of sales, property, and income taxes, and conclude with a model for making strategic decisions about land use based on a city's priorities.

Discard Studies Max Liboiron 2022-05-24 An argument that social, political, and economic systems maintain power by discarding certain people, places, and things. Discard studies is an emerging field that looks at waste and wasting broadly construed. Rather than focusing on waste and trash as the primary objects of study, discard studies looks at wider systems of waste and wasting to explore how some materials, practices, regions, and people are valued or devalued, becoming dominant or disposable. In this book, Max Liboiron and Josh Lepawsky argue that social, political, and economic systems maintain power by discarding certain people, places, and things. They show how the theories and methods of discard studies can be applied in a variety of cases, many of which do not involve waste, trash, or pollution. Liboiron and Lepawsky consider the partiality of knowledge and offer a theory of scale, exploring the myth that most waste is municipal solid waste produced by consumers; discuss peripheries, centers, and power, using content moderation as an example of how dominant systems find ways to discard; and use theories of difference to show that universalism, stereotypes, and inclusion all have politics of discard and even purification—as exemplified in “inclusive” efforts to broaden the Black Lives Matter movement. Finally, they develop a theory of change by considering “wasting well,” outlining techniques, methods, and propositions for a justice-oriented discard studies that keeps power in view.

Virtual Inequality Karen Mossberger 2003-08-18 That there is a “digital divide”—which falls between those who have and can afford the latest in technological tools and those who have neither in our society—is indisputable. *Virtual Inequality* redefines the issue as it explores the cascades of that divide, which involve access, skill, political participation, as well as the obvious economics. Computer and Internet access are insufficient without the

skill to use the technology, and economic opportunity and political participation provide primary justification for realizing that this inequality is a public problem and not simply a matter of private misfortune. Defying those who say the divide is growing smaller, this volume, based on a unique national survey that includes data from over 1800 respondents in low-income communities, shows otherwise. In addition to demonstrating why disparities persist in such areas as technological abilities, the survey also shows that the digitally disadvantaged often share many of the same beliefs as their more privileged counterparts. African-Americans, for instance, are even more positive in their attitudes toward technology than whites are in many respects, contrary to conventional wisdom. The rigorous research on which the conclusions are based is presented accessibly and in an easy-to-follow manner. Not content with analysis alone, nor the untangling of the complexities of policymaking, *Virtual Inequality* views the digital divide compassionately in its human dimensions and recommends a set of practical and common-sense policy strategies. Inequality, even in a virtual form this book reminds us, is unacceptable and a situation that society is compelled to address.

Netzstadt Franz Oswald 2003 "Netzstadt stands for a model. It facilitates the differentiated portrayal of an urban development which has characterized cities and landscapes since the middle of the twentieth century. The model's foundation is the elucidation of criteria of durability and urbanity. Netzstadt stands for a transdisciplinary method by means of which urbanity can be analyzed and evaluated morphologically and physiologically, and redesigned in a process of modernization. Modernization means initiating an intelligent process in a democratic society in order to adapt the 'urban cultural landscape' to the needs of the future. Netzstadt is the title of a text book on designing cities. It addresses students and practitioners in the fields of city planning and city construction, in architecture, engineering and the natural sciences and the social sciences and economics"--Back cover.

The Planning System and Planning Terms in Germany Elke Pahl-Weber 2008 At a time when Europe is growing together, cooperation between countries is becoming increasingly necessary. One of the main reasons for pursuing transnational

spatial development is to attain a common understanding of the facts of spatial planning. Hence, the INTERREG III B project "COMMIN" sought to establish a common communication basis for the exchange of knowledge and experience in spatial planning and thus to foster and develop this understanding in the Baltic Sea region. Therefore, on the basis of a standardized structure the COMMIN project partners prepared basic information about institutional settings and spatial planning systems and compiled a glossary of key terminology in spatial planning accompanied by a varying range of fact sheets with respect to planning cases taken as examples. The readers will now find on www.commin.org the whole range of information covering the respective national languages as well as English translations, although in some countries official translations for these issues were lacking. The project partners were aware of the fact that each translation requires a balancing act between legal precision and communicable classification and, at the end, is a question of definition power and of different senses for semantics. The German text on hand (status December 2006) one information package out of eleven was prepared by a team comprising planners, lawyers, economists, and administrative academics. Actually no other publication treating this subject in English exists and it will hopefully contribute not only to understanding planning issues in Europe but also to transferring in this respect information and knowledge within the country. Anyway, being aware of differences between countries is a point of departure for the mutual understanding process.

Prometheus Tamed Cornel Zwielerlein 2021 "Over 8,200 large city fires broke out between 1000 and 1939 CE in Central Europe. Prometheus Tamed inquires into the long-term history of that fire ecology, its local and regional frequencies, its relationship to climate history. It asks for the visual and narrative representation of that threat in every-day life. Institutional forms of fire insurance emerged in the form of private joint stock companies (the British model, starting in 1681) or in the form of cameralist fire insurances (the German model, starting in 1676). They contributed to shape and change society, transforming old communities of charitable solidarity into risk communities, finally supplemented by networks of cosmopolite aid. After 1830, insurance agencies expanded tremendously quickly all over the globe: Cultural clashes of Western and native perceptions of fire risk and of what is insurance can be studied as part of a critical archaeology of world risk society and the plurality of modernities"--

Friedrich Rosen Amir Theilhaber 2020-09-07 The German lacuna in Edward Said's 'Orientalism' has produced varied studies of German cultural and academic Orientalisms. So far the domains of German politics and scholarship have not been conflated to probe the central power/knowledge nexus of Said's argument. Seeking to fill this gap, the diplomatic career and scholarly-literary productions of the centrally placed Friedrich Rosen serve as a focal point to investigate how politics influenced knowledge generated about the "Orient" and charts the roles knowledge played in political decision-making regarding extra-European regions. This is pursued through analyses of Germans in British imperialist contexts, cultures of lowly diplomatic encounters in Middle Eastern cities, Persian poetry in translation, prestigious Orientalist congresses in northern climes, leveraging knowledge in high-stakes diplomatic encounters, and the making of Germany's Islam policy up to the Great War. Politics drew on bodies of knowledge and could promote or hinder scholarship. Yet, scholars never systemically followed empire in its tracks but sought their own paths to cognition. On their own terms or influenced by "Oriental" savants they aligned with politics or challenged claims to conquest and rule.

Forests and Insects Allan D. Watt 1997-09-30 This book covers the full breadth of forest entomology. It combines the work of forest entomologists working on

the impact and management of forest pests with those involved in diversity assessment and conservation of insects in forests. *Forests and Insects* demonstrates that both these disciplines demand an understanding of population and community biology. The book covers such topics as colonization of trees by insects, population dynamics of forest insects, insect natural enemies, the effects of climate change and pollution on forest pests, spatial variation in the abundance of insects, the mineralization of carbon by termites, the impact of herbivorous insects, and the conservation of forest insect diversity, including the effects of forest fragmentation and deforestation. This Royal Entomological Society Symposium volume will be of great interest to all agricultural and forest entomologists, population and community biologists, pest management specialists and anyone concerned with the conservation of forest biodiversity.

Sustainable Smart Cities Marta Peris-Ortiz 2016-10-05 This volume provides the most current research on smart cities. Specifically, it focuses on the economic development and sustainability of smart cities and examines how to transform older industrial cities into sustainable smart cities. It aims to identify the role of the following elements in the creation and management of smart cities: • Citizen participation and empowerment • Value creation mechanisms • Public administration • Quality of life and sustainability • Democracy • ICT • Private initiatives and entrepreneurship Regardless of their size, all cities are ultimately agglomerations of people and institutions. Agglomeration economies make it possible to attain minimum efficiencies of scale in the organization and delivery of services. However, the economic benefits do not constitute the main advantage of a city. A city's status rests on three dimensions: (1) political impetus, which is the result of citizens' participation and the public administration's agenda; (2) applications derived from technological advances (especially in ICT); and (3) cooperation between public and private initiatives in business development and entrepreneurship. These three dimensions determine which resources are necessary to create smart cities. But a smart city, ideal in the way it channels and resolves technological, social and economic-growth issues, requires many additional elements to function at a high-performance level, such as culture (an environment that empowers and

engages citizens) and physical infrastructure designed to foster competition and collaboration, encourage new ideas and actions, and set the stage for new business creation. Featuring contributions with models, tools and cases from around the world, this book will be a valuable resource for researchers, students, academics, professionals and policymakers interested in smart cities.

Jew's Beech Annette von Droste-Hulshoff 2018-01-01 Based on a true story, this haunting tale centers on two brutal murders--the first of a local forester and the second of a Jewish moneylender near a beech tree--and the impact these events have on the life of Friedrich Mergel, a herdsman with a turbulent family history. A prototype of the murder mystery and a thoughtful examination of village society, this intriguing novella contains hints of the Gothic and the uncanny, including ominous thunderstorms, mysterious disappearances, eerie doppelgangers and grizzly discoveries, as well as a famously ambiguous climax.

Autonomous Driving Markus Maurer 2016-05-21 This book takes a look at fully automated, autonomous vehicles and discusses many open questions: How can autonomous vehicles be integrated into the current transportation system with diverse users and human drivers? Where do automated vehicles fall under current legal frameworks? What risks are associated with automation and how will society respond to these risks? How will the marketplace react to automated vehicles and what changes may be necessary for companies? Experts from Germany and the United States define key societal, engineering, and mobility issues related to the automation of vehicles. They discuss the decisions programmers of automated vehicles must make to enable vehicles to perceive their environment, interact with other road users, and choose actions that may have ethical consequences. The authors further identify expectations and concerns that will form the basis for individual and societal acceptance of autonomous driving. While the safety benefits of such vehicles are tremendous, the authors demonstrate that these benefits will only be achieved if vehicles have an appropriate safety concept at the heart of their design. Realizing the potential of automated vehicles to reorganize traffic and transform mobility of people and goods requires similar care in the design of vehicles and networks. By covering all of these topics, the book aims to provide a current, comprehensive, and scientifically sound treatment of the emerging field of "autonomous driving".
