**COMPENDIO TÉCNICAS APLICADAS A MUESTRAS BIOLÓGICAS** Daiglys García El propósito en esta obra es presentar un compendio de las técnicas aplicadas en el laboratorio clínico-patológico con respecto a las muestras biológicas que se reciben y procesan. Este texto está dirigido a médicos, técnicos, citotecnólogos, histotecnólogos, biólogos, bioquímicos, veterinarios y otros profesionales del sector salud, que estén relacionados con la problemática de lo que a veces constituye el abordaje de recolección de muestras biológicas como citologías y biopsias, así como otros aspectos que influyen en el diagnóstico y el control de calidad. Haremos un resumen de materiales y métodos de recolección necesarios para recolección de muestras sanguíneas, líquidos corporales, punciones, entre otras. El libro recoge la experiencia de los autores en el desarrollo y la aplicación de diversas técnicas para el procesamiento y diagnóstico adecuado de estas muestras, sugiriendo la estandarización de métodos de diagnóstico directo en los laboratorios de citología, histología e inmunohistoquímica, de manera que los resultados de esos análisis ayuden a establecer un estándar común y a racionalizar el uso racional de los recursos disponibles. Para esto, las técnicas sugeridas son sencillas, robustas y de fácil desarrollo en cualquier sitio de la geografía latinoamericana, e ilustradas con algunas fotografías y figuras de autoría propia de los autores, que facilitarán su entendimiento por profesionales que se están iniciando en este campo del conocimiento.

Para celebrar este acontecimiento, el Fondo de Cultura Económica reunió en esta antología fragmentos de obras publicadas a lo largo de ya 30 años en sus 11 áreas temáticas, cuyo eje transversal es la cuestión del origen: el origen del universo, de los elementos químicos, de la vida en la Tierra y del ser humano, pero también el origen de la ciencia misma. El origen de la ciencia es, pues, una invitación a iniciarse en el pensamiento científico y a continuar con la lectura de cada una de las 250 obras que componen la colección.

*Minimal Stimulation and Natural Cycle In Vitro Fertilization* Gautam N. Allahbadia 2015-10-06 This contributed volume regenerates the significance of and respect for natural phenomenon in the background of the risks and complications seen in ART such as ovarian hyperstimulation and multiple pregnancies. Balancing the clinical practice between the beneficial natural physiology and the prolific use of stimulation drugs for ART may help eliminate risks that may prove clinically, financially and psychologically expensive. It underscores the fact that 'greater' is not always synonymous with 'better' with regard to the oocyte yield. While highlighting the risks involved with the use of high-dose gonadotropins, the book presents a stratification of patients who might benefit from the 'soft' minimal and natural cycle IVF stimulation protocols that may be used. Additionally, clinicians can understand the significance of cryopreservation technology, now a useful adjunct to minimal stimulation protocols, with its manifold future advantages. Written by an international team of experts, this handbook emphasizes how minimal stimulation and natural cycle IVF can lead to a milder, safer and more effective approach to ART.

**Preimplantation Embryo Development** Barry D. Bavister 2012-12-06 This volume contains the Proceedings of the Serono Symposium on Pre implantation Embryo Development, held in Newton, Massachusetts, in 1991. The idea for the symposium grew out of the 1989 Serono Symposium on Fertilization in Mammals\* at which preimplantation development was the predominant suggestion for a follow-up topic. This was indeed a timely subject in view of the recent resurgence of interest in this fundamental phase of embryogenesis and its relevance to basic research and applied fertility studies in humans, food-producing animals, and endangered species. The symposium brought together speakers from a broad range of disciplines in order to focus on key regulatory mechanisms in embryo

development, using a wide variety of animal models, and on representative topics in human preimplantation embryogenesis. The culmination of preimplantation development is a blastocyst containing the first differentiated embryonic tissues and capable of initiating and sustaining pregnancy. The central objective of the symposium was to throw light on the regulation of cellular and molecular events underlying blastocyst formation. It was particularly appropriate that the date of the symposium marked the 20th anniversary of the publication of the classic volume *Biology of the Blastocyst*, the proceedings of an international workshop held in 1970. This book, which summarized most of the information then available on this topic in mammals, was edited by the pioneer in blastocyst research, Dr. Richard Blandau, who was the guest speaker at the symposium.

**Contenido y método de la economía** Enrique Palazuelos 2000-04-25 El presente libro consta de tres partes. En la primera se examina la relación que existe entre el análisis económico y la elaboración científica, explicando cual es el estatuto epistemológico de las principales corrientes del pensamiento económico, mientras que en la segunda parte se examina el contenido fundamental de las principales propuestas teóricas en el campo de la economía. El estudio de ambas cuestiones da lugar a que el autor pueda establecer su propia posición sobre el método y el contenido de la economía. Una vez fijadas esas referencias epistemológicas y teóricas, en la tercera parte del libro se formulan las propuestas analíticas que permiten interpretar la dinámica de la economía mundial, explicando cuáles son las características actuales del escenario económico internacional.

*Hormonal Control of Reproduction* Colin Russell Austin 1984 In this, our Second Edition of *Reproduction in Mammals*, we are responding to numerous requests for a more up-to-date and rather more detailed treatment of the subject. The First Edition was accorded an excellent reception, but the first five books were written ten years ago and inevitably there have been advances on many fronts since then. As before, the manner of presentation is intended to make the subject matter interesting to read and readily comprehensible to undergraduates in the biological sciences, and yet with sufficient depth to provide a valued source of information to graduates engaged in both teaching and research. Our authors have been selected from among the best known in their respective fields. This volume discusses the manifold ways in which hormones control the reproductive processes in male and female mammals. The hypothalamus regulates both the anterior and posterior pituitary glands, whilst the pineal can exert a modulating influence on the hypothalamus. The pituitary gonadotrophins regulate the endocrine and gametogenic activities of the gonads, and there are important local feedback effects of hormones within the gonads themselves. Non-pregnant females display many different types of oestrous or menstrual cycles, and there are likewise great species differences in the endocrinology of pregnancy. But the hallmark of mammals is lactation, and this also exerts a major control on subsequent reproductive activity.
