The Secret of Tecumseh's Gold Jeff Darnell 2020-10-15 Teenagers Billy Mac, Emmett, Maddie and Joseph are back in this sequel to "The Mystery of the Tomahawk Pipe". It is 1925, a year after their adventure began. Warm weather and low water levels finally allow them to venture back into the flooded cave. They find Tecumseh's gold really was hidden there at one time, but it has since been moved. Who moved it, why, and where is it now? The four friends must battle time and the treachery of an old adversary to find the treasure. But, danger, deceit - and even death - counter their search for answers. With the help of an unlikely band of ragamuffins and Billy Mac's newfound guardian spirit, they unravel a trail of clues that lead them to the truth, but the cost is high. In this adventure built around the real-life legend of Tecumseh's hidden gold, everyone from the original story is back. Together, they discover not only the secret of the gold, but truths about themselves, as well.

SOA with REST Thomas Erl 2012-08-06 The Definitive Guide to Building Web-Centric SOA with REST The World Wide Web is based on the most successful technology architecture in history. It has changed how we view, access, and exchange information and, with the advent of REST, it has also provided us with compelling ways to build and improve automation solutions. REST provides a great deal of guidance to ensure that an architecture and its automation logic are technically sound, though it is still your responsibility to build services that actually add value to your business. SOA with REST is the first comprehensive tutorial and reference for designing and building RESTful services as part of service-oriented solutions and in conjunction with service-oriented architecture (SOA). This book demonstrates that REST is not only a suitable medium for building truly service-oriented solutions, but also that the service-oriented architectural model is a necessary foundation for REST technology architectures to realize their full business potential. The authors provide thorough mapping of REST constraints and architectural goals with service-orientation principles and SOA characteristics. Using real-world examples, they show how to leverage REST's simplicity, flexibility, and low overhead without compromising the power or manageability of service-oriented solutions and architectures. This ebook will be valuable to IT architects, developers, and any practitioner seeking to use SOA and REST together.

The Fiction Class Susan Breen 2008-02-26 Read Susan Breen's posts on the Penguin Blog. A witty, honest, and hugely entertaining story for anyone who loves books, or has a difficult mother. And, let's face it, that's practically everybody . . . On paper, Arabella Hicks seems more than qualified to teach her fiction class on the Upper West Side: she's a writer herself; she's passionate about books; she's even named after the heroine in a Georgette Heyer novel. On the other hand, she's thirty-eight, single, and has been writing the same book for the last seven years. And she has been distracted recently: on the same day that Arabella teaches her class she also visits her mother in a nursing home

outside the city. And every time they argue. Arabella wants the fighting to stop, but, as her mother puts it, "Just because we're family, doesn't mean we have to like each other." When her class takes a surprising turn and her lessons start to spill over into her weekly visits, she suddenly finds she might be holding the key to her mother's love and, dare she say it, her own inspiration. After all, as a lifelong lover of books, she knows the power of a good story.

OCR Information & Communication Technology GCSE Steve Cushing 2010-06-25 OCR Information and Communication Technology GCSE Student's Book has been published to support OCR's new specification. Written by highly experienced senior examiners and teachers, the text covers the four units of the course: - ICT in Today's World - Practical Applications in ICT - ICT in Context - Creative use of ICT and Coding a solution The core knowledge and understanding required by students for the examined units is provided through an accessible and comprehensive narrative. Tasks and exam-style questions are provided throughout the chapters, providing students with opportunities to prepare for the exams. Students are also provided with support in tackling the tasks demanded by Units 2 and 4a / 4b of the course.

Analog Signal Processing with Laplace Transforms and Active Filter Design Don A. Meador 2002 This book, written as an introduction to analog signal processing, offers examples that are worked in detail, showing step-by-step how to apply the techniques discussed within. In an effort to use current computing technologies, sections on how to work problems using MATLAB and the TI-89 hand calculator are given. Other topics covered include: basic equations for complex analog waveforms, Laplace transforms, Laplace circuit analysis, transfer functions for analog circuits, pole-zero plots, frequency response of analog circuits, filter specifications, frequency response characteristics of op-amps, and the design of Butterworth, Chebyshev, and elliptic active filters.

Dan Tesene Dan Tesene 2016-07-16 The drawings which compose Sketchbook Works Vol. 1 & 2 were developed through pain staking processes of organized mark making within the rigid confines of the grid. The production of these works employ traditional methods of drawing, as well as unconventional modes such as

tediously mixing a vast array of custom marker colors for perfect gradients, laser engraving miniature patterns onto pages, and using destructive processes like dissolving imagery with chemical solvents. These drawing processes craft a diverse array of visual experiences derived not only from organized drawing systems, but also from mistakes and destructive actions, whose results were sources of evolution seen in this body of work.

One-Minute Answers to Skeptics Charlie H. Campbell 2010-01-01 Speaking all over the United States about apologetics issues, Charlie Campbell has heard just about every question skeptics have to offer. In this concise, reader-friendly handbook, he provides brief responses to the top-40 questions that keep people from the faith, such as... What evidence do you have that God exists? How do you know the Bible is actually true? What about those who have never heard of Jesus? Will they be condemned to hell? If God is so loving, why does He allow evil and suffering? How can you say Jesus is the only way to heaven? Don't all religions basically teach the same thing? Aren't a lot of churchgoers hypocrites? With a gracious introductory note to skeptical readers and a generous sprinkling of inspiring quotes throughout, this handy resource is an enjoyable read as well as a powerful evangelistic tool.

Evolution: an introduction takes a fresh approach to classical topics such as population genetics and natural selection, and gives an overview of recent advances in hot areas such as sexual selection, genetic conflict, life history evolution, and phenotypic plasticity. Detail of contents The Prologue is unique and uniquely motivating. It makes four central points about evolution in the form of four case studies told as brief stories. Chapters 1-3 describe natural selection and the essential difference between adaptive and neutral evolution with unmatched clarity and simplicity. Chapter 4 emphasizes the essential message of population genetics without burdening the students with any of the unessential details and places unique emphasis on the role of the genetic system in constraining the response to selection. Chapter 6 is not found in any other evolution textbook, although there are a number of recent books on the subject, and it therefore provides an introductory overview of a topic that has been the object of much recent interest and promises to generate much more insight: the expression of genetic variation analysed with the concept of reaction norms. Chapters 7-9 cover sex, life histories, and sexual selection in greater depth than they are dealt with in any other introductory textbook but without introducing advanced technical language and analysis. Chapters 6-9 thus give unprecedented coverage to phenotypic evolution in an introductory text. Chapter 10 on multilevel selection and genetic conflict is unique in introductory textbooks. Rolf Hoekstra has achieved a wonder of clarity and concision on the essentials of this exciting topic. Chapters 11 and 12 on speciation and systematics are, by comparison, pretty standard, but they continue the policy of clarity and concision with the focus on essentials. Chapter 13 on the history of the planet and of life is a completely new approach unabashedly designed to motivate students to think about deep time, geology, paleontology, and fossils. Chapter 14 on the major transitions in evolution is also not found in any other introductory textbook. It documents the conceptual issues raised in the history of life briefly and in a form that will stimulate the gifted. Chapter 15 profiles the chief insights made possible by molecular systematics in the form of four case studies ranging from deep time to recent European history. It has standard content but unique structure. A strong point is the way mitochondrial Eve is contrasted with transspecies polymorphism to show students how to think about inferences with molecular evidence. Chapter 16 briefly presents the principle comparative methods and the kinds of insights that can be achieved with them. It is not unique - Ridley covers this ground well - but the examples used are new and the essential features of the methods - including potential pitfalls - are quite clearly described. Chapter 17 places evolutionary thought into the context both of the natural sciences and of society at large.
