An Evidence-based Approach to Vitamins and Minerals Jane Higdon 2003 Organized by nutrient, this evidence-based reference synthesizes all of the most current research on vitamins and minerals in an easy-to-use format. Each chapter addresses the function the nutrient plays in the human body; current definitions of deficiency, including Recommended Dietary Allowance (RDA) or Adequate Intake (AI) recommendations; the use of the nutrient for prevention or treatment of a disease, if known; dietary and other sources of the nutrient, including food and supplement sources (breaking down the different supplement forms); safety precautions for overdosing and drug interactions; and the Linus Pauling Institute's current recommendation for health maintenance. Each chapter has been reviewed by an expert in the area, all of whom are noted in the Editorial Advisory Board. This work is endorsed by the Linus Pauling Institute of Oregon State University. Four appendices add to the clinical usefulness of this work: a quick reference to disease prevention and treatment recommendations made throughout the text, nutrient - nutrient interactions, drug - nutrient interactions, and a glossary.

This new edition of the book by Jean Bruneton has been revised and expanded by over 200 pages, to reflect the most recent advances (natural or semisynthetic substances) as well as the most recent contributions to the therapeutic arsenal (antimalarial, antitumor, or antiretroviral agents). Building upon biosynthetic relationships, the author describes the different classes of metabolites and the drugs that produce them. Organized in four parts (primary metabolites, phenolics, shikimates and acetates, terpenes and steroids, alkaloids), the book develops for each class, phytochemical generalities, distribution, biosynthesis, extraction and quantitation methods, and biological aspects. For each raw material, it presents the origin, identity, production, composition, uses, processing and optimization: thus a considerable amount of botanical, chemical, analytical, pharmacological and therapeutic data is gathered into a particularly coherent compilation, for each product, the therapeutic indications and recommended usage are specified. An extensive index (about 3 000 entries) and nearly 500 recent references represent a valuable starting point for the reader's own literature research. This encyclopedia of pharmacognosy and phytochemistry is written for students, educators and professionals using plant resources in pharmacy, cosmetology, perfumery, botany, food technology and other fields.

LSD, My Problem Child Albert Hofmann 2005 This is the story of LSD told by a concerned yet hopeful father, organic chemist Albert Hofmann. He traces LSDs path from a promising psychiatric research medicine to a recreational drug sparking hysteria and prohibition. We follow Dr. Hofmanns trek across Mexico to discover sacred plants related to LSD, and listen in as he corresponds with other notable figures about his remarkable discovery. Underlying it all is Dr. Hofmanns powerful conclusion that mystical experience may be our planets best hope for survival. Whether induced by LSD, meditation, or arising spontaneously, such experiences help us to comprehend the wonder, the mystery of the divine in the microcosm of the atom, in the macrocosm of the spiral nebula, in the seeds of plants, in the body and soul of people. Now, more than sixty years after the birth of Albert Hofmanns problem child, his vision of its true potential is more relevant, and more needed, than ever.

The World Bank Glossary World Bank 1996 This edition of the World Bank has been revised and expanded by the Terminology Unit in the Languages Services Division of the World Bank in collaboration with the English, Spanish, and French Translation Sections. The Glossary is intended to assist the Bank's translators and interpreters, other Bank staff using French and Spanish in their work, and free-lance translator's and interpreters employed by the Bank. For this reason, the Glossary contains not only financial and economic terminology and terms relating to the Bank's procedures and practices, but also terms that frequently occur in Bank documents, and others for which the Bank has a preferred equivalent. Although many of these terms, relating to such fields as agriculture, education, energy, housing, law, technology, and transportation, could be found in other sources, they have been assembled here for ease of reference. A list of acronyms occurring frequently in Bank texts (the terms to which they refer being found in the Glossary) and a list of international, regional, and national organizations will be

found at the end of the Glossary.

Mini Nutritional Assessment (MNA) Bruno J. Vellas 1999 This book is the first of a new series which will present the proceedings of the newly established Nestlé Nutrition Workshop Series: Clinical & Performance Programme aimed at adult nutrition. Undernutrition is a common phenomenon in elderly people, and malnutrition reaches significant levels in those being in hospital, nursing homes or home care programs. Consequences of malnutrition often go unrecognised owing to the lack of specific validated instruments to assess nutritional status in frail elderly persons. The Mini Nutritional Assessment (MNA) provides a single, rapid assessment of nutritional status in the elderly of different degrees of independence, allowing the prevalence of protein-energy malnutrition to be determined and to evaluate the efficacy of nutritional intervention and strategies. Easy, quick and economical to perform, it enables staff to check the nutritional status of elderly people when they enter hospitals or institutions and to monitor changes occurring during their stay. Moreover, the MNA is predictive of the cost of care and length of stay in hospital. This publication will be of immense assistance to heads of geriatric teaching units, teachers in nutrition, clinicians general practitioners and dieticians, enabling them to better detect, recognise and start treatment of malnutrition in the elderly.

Road Traffic Injury Prevention Training Manual Dinesh Mohan 2006 Road traffic collisions kill about 1.2 million people around the world every year but they are largely neglected as a health and development issue, perhaps because they are still viewed by many as being beyond human control. Efforts to prevent road traffic injuries are hampered by a lack of human capacity. Policy-makers, researchers and practitioners need information on effective prevention measure and on how to develop, implement and evaluate such interventions. There is a need to train more specialists in road traffic injury prevention in order to address the growing problem of road traffic injuries at international levels.

Química para el nuevo milenio John W. Hill 1999

Bioquímica. Fundamentos para Medicina y Ciencias de la Vida Werner Müller-Esterl 2008 El objetivo de este libro es ordenar los principios y conceptos básicos de la Bioquímica para presentarlos en una estructura clara que muestre al lector el camino hacia el fascinante cosmos de las biomoléculas y lo guíe en los temas más importantes. Con ello se pretende llenar el vacío existente entre las pesadas "Biblias" de la bioquímica y los breves "Libros de lectura elementales" para la preparación de exámenes. Siguiendo una organización lógica, la obra se ha desglosado en cinco grandes partes. La primera de ellas, La arquitectura molecular de la vida, es una breve visión de la bioquímica y la biología celular que se desarrollará en las cuatro partes restantes: Estructura y función de las proteínas, Almacenamiento y expresión de la información genética, transducción de señal en membranas biológicas y Conversión de energía y biosíntesis. El ser humano, y con él los mamíferos, son los principales organismos que se utilizan como ejemplo en el desarrollo de los temas, Si con ello se despierta el interés del lector por la bioquímica, ¡el objetivo esencial de este libro se habrá conseguido!

The Double Helix James D. Watson 2011-08-16 The classic personal account of Watson and Crick's groundbreaking discovery of the structure of DNA, now with an introduction by Sylvia Nasar, author of *A Beautiful Mind*. By identifying the structure of DNA, the molecule of life, Francis Crick and James Watson revolutionized biochemistry and won themselves a Nobel Prize. At the time, Watson was only twenty-four, a young scientist hungry to make his mark. His uncompromisingly honest account of the heady days of their thrilling sprint against other world-class researchers to solve one of science's greatest mysteries gives a dazzlingly clear picture of a world of brilliant scientists with great gifts, very human ambitions, and bitter rivalries. With humility unspoiled by false modesty, Watson relates his and Crick's desperate efforts to beat Linus Pauling to the Holy Grail of life sciences, the identification of the basic building block of life. Never has a scientist been so truthful in capturing in words the flavor of his work.
