Malicious Cryptography Adam Young 2004-07-30 Hackers have uncovered the dark side of cryptography—that device developed to defeat Trojan horses, viruses, password theft, and other cyber-crime. It's called cryptovirology, the art of turning the very methods designed to protect your data into a means of subverting it. In this fascinating, disturbing volume, the experts who first identified cryptovirology show you exactly what you're up against and how to fight back. They will take you inside the brilliant and devious mind of a hacker—as much an addict as the vacant-eyed denizen of the crackhouse—so you can feel the rush and recognize your opponent's power. Then, they will arm you for the counterattack. This book reads like a futuristic fantasy, but be assured, the threat is ominously real. Vigilance is essential, now. Understand the mechanics of computationally secure information stealing Learn how non-zero sum Game Theory is used to develop survivable malware Discover how hackers use public key cryptography to mount extortion attacks Recognize and combat the

danger of kleptographic attacks on smart-card devices Build a strong arsenal against a cryptovirology attack

Data Mining in Drug Discovery Rémy D. Hoffmann 2013-12-04 Written for drug developers rather than computer scientists, this monograph adopts a systematic approach to mining scientific data sources, covering all key steps in rational drug discovery, from compound screening to lead compound selection and personalized medicine. Clearly divided into four sections, the first part discusses the different data sources available, both commercial and non-commercial, while the next section looks at the role and value of data mining in drug discovery. The third part compares the most common applications and strategies for polypharmacology, where data mining can substantially enhance the research effort. The final section of the book is devoted to systems biology approaches for compound testing. Throughout the book, industrial and academic drug discovery strategies are addressed, with contributors coming from both areas, enabling an informed decision on when and which data mining tools to use for one's own drug discovery project.

Crossing Languages to Play with Words Sebastian Knospe 2016-09-26 Wordplay involving several linguistic codes is an important modality of ludic language. This volume offers a multidisciplinary approach to the topic, discussing examples from different epochs, genres, and communicative situations. The contributions illustrate the multi-dimensionality, linguistic make-up, and the special interactive potential of wordplay across linguistic and cultural boundaries, including the challenging practice of translation.

Architecture in Words Louise Pelletier 2006-09-27 What if the house you are about to enter was built with the confessed purpose of seducing you, of creating various sensations destined to touch your soul and make you reflect on who you are? Could architecture have such power? This was the assumption of generations of architects at the beginning of modernity. Exploring the role of theatre and fiction in defining character in architecture, Louise Pelletier examines how architecture developed to express political and social intent. Applying this to the modern day, Pelletier considers how architects can learn from these eighteenth century attitudes in order to restore architecture's communicative dimension. Through an in-depth and interdisciplinary analysis of the beginning of modernity, Louise Pelletier encourages today's architects to consider the political and linguistic implications of their tools. Combining theory, historical studies and research, *Architecture in Words* will provoke thought and enrich the work of any architect.

Histories of Post-Mortem Contagion Christos Lynteris 2017-12-13 This edited volume draws historians and anthropologists together to explore the contested worlds of epidemic corpses and their disposal. Why are burials so frequently at the center of disagreement, recrimination and protest during epidemics? Why are the human corpses produced in the course of infectious disease outbreaks seen as dangerous, not just to the living, but also to the continued existence of society and civilization? Examining cases from the Black Death to Ebola,

contributors challenge the predominant idea that a single, universal framework of contagion can explain the political, social and cultural importance and impact of the epidemic corpse.

The Aesthetics of Enchantment in the Fine Arts M. Kronegger 2013-03-14 Let us revive the true sense of fine arts: enchantment! In the conceptualised, commercialised, artificial approach to fine arts, we forgot its authentic experiential sense. It lies at the imaginative heart of all arts there to be retrieved by the creative recipient as the very 'truth of it all'.

Tibetan Literature Jose Ignacio Cabezon 1996-01-01 Tibetan Literature addresses the immense variety of Tibet's literary heritage. An introductory essay by the editors attempts to assess the overall nature of 'literature' in Tibet and to understand some of the ways in which it may be analyzed into genres. The remainder of the book contains articles by nearly thirty scholars from America, Europe, and Asia—each of whom addresses an important genre of Tibetan literature. These articles are distributed among eight major rubrics: two on history and biography, six on canonical and quasi-canonical texts, four on philosophical literature, four on literature on the paths, four on ritual, four on literary arts, four on non-literary arts and sciences, and two on guidebooks and reference works.

Contemporary Garden Aesthetics, Creations and Interpretations Stephen Bann 2007 Using a variety of critical perspectives, this text demonstrates a renewal of garden design and directions for garden aesthetics, analysing projects by Fernando Chacel (Brazil), Andy Goldsworthy (Great Britain), Charles Jencks (Great Britain), Patricia Johanson (U.S.) and Bernard Lassus (France).

Buddhism and Abortion Damien Keown 2016-07-27 Abortion is arguably the most controversial and divisive moral issue of modern times, but up until now the debate has taken place almost exclusively within a Western cultural, religious and philosophical context. For the past three decades in the West arguments both for and against abortion have been mounted by groups of all kinds, from religious fundamentalists to radical feminists and every shade of opinion in between. Rather than mutual understanding, however, the result has been the polarisation of opinion and the deepening of entrenched positions. In the face

of this deadlock a new perspective is urgently required. Buddhism is an ancient tradition which over the centuries has refined its distinctive beliefs and values in the course of a long interaction with the major cultures of Asia. As Buddhism continues to engage the attention of the West, the time is now opportune for its views on abortion to be heard. This is the first book to explore the abortion question from a range of Buddhist cultural and ethical perspectives. The approach is interdisciplinary and will be of relevance to those working in fields such as law, ethics, medicine, philosophy, religion, the social sciences and women's studies.

Crop Management Fabio Marin 2012-02-22 Agricultural production is related to physical constraints, which may not always be overcome by technology. However, under the same conditions, it is possible to see well-managed farms consistently making greater profits than similarly structured, neighboring farms. For each abiotic condition, it is well-known there is a difference between the potential and observed yields, which is usually high and often could be reduced through more appropriate management techniques. In this book, we have a selection of agricultural problems encountered in different regions of the world which were addressed using creative solutions, offering new approaches for well-known techniques and new tools for old problems.

Monstrous Imagination Marie-Hélène Huet 1993 What woeful maternal fancy produced such a monster? This was once the question asked when a deformed infant was born. From classical antiquity through to the Enlightenment, the monstrous child bore witness to the fearsome power of the mother's imagination. What such a notion meant and how it reappeared, transformed, in the Romantic period are the questions explored in this book, a study of theories linking imagination, art and monstrous progeny.

Karmasiddhiprakarana Vasubandhu 1988 Under the influence of his teacher, Louis de la Vallée Poussin, Prof. Lamotte published several works in French, which were primarily editions, translations and commentaries on Tibetan and Chinese Buddhist texts. The theories and concepts contained in this particular work are closely related to those of the *Abhidharmakosa*, and as such it makes a valuable companion to that larger work. Here Prof. Pruden has provided a masterful English translation of Prof. Lamotte's work, and has added a brief biography of Prof. Lamotte and his scholarly accomplishments to familiarize the reader with this great scholar of Buddhism. Monica Paul Bourget 2017-06-10 Excerpt from *Monica: And Other Stories* To render perfectly intelligible the adventure to which these retrospective details serve as introduction, we must add that Marguerite, though Franquetot's own child,

has never at all resembled her father. From her mother she inherits her big bones, her black hair, thick and coarse, and that soul, also, all animal and instinctive, capable alike of better and of worse, which by turns gives to her yellowish-brown eyes a courageous fire and the sly savagery of a wild beast. She still is there in the workshop, and you will see her bent over her frame, - her profile always sharper and more like an animal as time goes on, a profile in which a caricaturist would detect a resemblance to the weasel. How and why did it chance that Franquetot, who, though a man of the people, has not a trace of vulgarity, should have married the clownish creature who could bear him a daughter like this? Here, again, he showed the type of the unpractical man of genius who marries at random - anybody - to have some one who will spare him the intolerable vexation of material cares. La maman, as he now calls his wife, was a servant in a creamery when he first met her. About the Publisher

Who Wrote the Bible? Richard Friedman 2019-01-15 A much anticipated reissue of *Who Wrote the Bible?*—the contemporary classic the *New York Times Book Review* called “a thought-provoking [and] perceptive guide” that identifies the individual writers of the Pentateuch and explains what they can teach us about the origins of the Bible. For thousands of years, the prophet Moses was regarded as the sole author of the first five books of the Bible, known as the Pentateuch. According to tradition, Moses was divinely directed to write down foundational events in the history of the world: the creation of humans, the worldwide flood, the laws as they were handed down at Mt. Sinai, and the cycle of Israel’s enslavement and liberation from Egypt. However, these stories—and their frequent discrepancies—provoke questions: why does the first chapter in Genesis say that man and woman were made in God’s image, while the second says that woman was made from man’s rib? Why does one account of the flood say it lasted forty days, while another records no less than one hundred? And why do some stories reflect the history of southern Judah, while others seem sourced from northern Israel? Originally published in 1987, Richard Friedman’s *Who Wrote the Bible?* joins a host of modern scholars who show that the Pentateuch was written by at least four distinct voices—separated by borders, political alliances, and particular moments in history—then connected by brilliant editors. Rather than cast doubt onto the legitimacy of the Bible, Friedman uses these divergent accounts to illuminate a text that was written by real people. Friedman’s seminal and bestselling text is a comprehensive and authoritative answer to the question: just who exactly wrote the Bible?

Gems in the Early Modern World Michael Bycroft 2018-11-27 This edited collection is an interdisciplinary study of gems in the early modern world. It examines the relations between the art, science, and technology of gems, and it does so against the backdrop of an expanding global trade in gems. The eleven chapters are organised into three parts. The first part sets the scene by describing how gems moved around the early modern world, how they were set in motion, and how they were pulled together in the course of their travels. The second part is about value. It asks why people valued gems, how they determined the value of a given gem, and how the value of a gem was connected to its perceived place of origin. The third part deals with the skills involved in cutting, polishing, and mounting gems, and how these skills were transmitted and articulated by artisans. The common themes of all these chapters are materials, knowledge and global trade. The contributors to this volume focus on the material properties of gems such as their weight and hardness, on the knowledge involved in exchanging them and valuing them, and on the cultural consequences of the expanding trade in gems in Eurasia and the Americas.

Human Extinction and the Pandemic Imaginary Christos Lynteris 2019-09-19 This book develops an examination and critique of human extinction as a result of the 'next pandemic' and turns attention towards the role of pandemic catastrophe in the renegotiation of what it means to be human. Nested in debates in anthropology, philosophy, social theory and global health, the book argues that fear of and fascination with the 'next pandemic' stem not so much from an anticipation of a biological extinction of the human species, as from an expectation of the loss of mastery over human/non-human relations. Christos Lynteris employs the notion of the 'pandemic imaginary' in order to understand the way in which pandemic-borne human extinction refashions our understanding of humanity and its place in the world. The book challenges us to think how cosmological, aesthetic, ontological and political aspects of pandemic catastrophe are intertwined. The chapters examine the vital entanglement of epidemiological studies, popular culture, modes of scientific visualisation, and pandemic preparedness campaigns. This volume will be relevant for scholars and advanced students of anthropology as well as global health, and for many others interested in catastrophe, the 'end of the world' and the (post)apocalyptic.

The Perfect Heresy Stephen O'Shea 2001 A shattering chronicle of the life and death of the Cathar movement -- one of Western civilization's great tragedies. At the beginning of the 13th century, the Cathars, a group of heretical

Christians, thrived across what is now southern France, but was then a patchwork of city states and principalities beholden to neither king nor bishop. The Cathars held revolutionary beliefs that threatened the authority of the Catholic Church as well as the legitimacy of feudal law: they thought the idea of Hell, indeed the entire metaphysic constructed by the Church, to be a sham; they rejected all sacraments, including marriage; they thought private property an absurd notion and that all things worldly were corrupt; they gave women religious status equal to men. Though they lived peacefully, the Cathars growing influence enraged a Catholic Church that was flexing its muscle after decades of weakness, and its powerful Pope, Innocent III. The Church recruited the forces of France, eager to expand her territory to the south, and systematically attacked the Cathars in crusades between 1209 and 1229. By the time the wars were over, the map of Europe had been rearranged, and the Inquisition -- unleashed. Full of colourful and passionate personalities, *The Perfect Heresy* sheds new light on the 13th century and on the timelessness of religious intolerance.

A Bull of a Man John Powers 2009 The androgynous, asexual Buddha of contemporary popular imagination stands in stark contrast to the muscular, virile, and sensual figure presented in Indian Buddhist texts. In this groundbreaking study of previously unexplored aspects of the early Buddhist tradition, John Powers skillfully adapts methodological approaches from European and North American historiography to the study of early Buddhist literature, art, and iconography, highlighting aspects of the tradition that have been surprisingly invisible in earlier scholarship.

The Anthropology of Epidemics Ann H. Kelly 2019-01-15 Over the past decades, infectious disease epidemics have come to increasingly pose major global health challenges to humanity. *The Anthropology of Epidemics* approaches epidemics as total social phenomena: processes and events which encompass and exercise a transformational impact on social life whilst at the same time functioning as catalysts of shifts and ruptures as regards human/non-human relations. Bearing a particular mark on subject areas and questions which have recently come to shape developments in anthropological thinking, the volume brings epidemics to the forefront of anthropological debate, as an exemplary arena for social scientific study and analysis.

Media Manifestos Régis Debray 1996 In this volume Régis Debray sums up over a decade of his research and writing on the evolution of subjects of communication and the technologically transmitted interventions of the modern intelligentsia in France. *Media Manifestos* announces the battle-readiness of a new sub-discipline of the sciences humaines: "medialogy." Scion of that semiology of the sixties linked with the names of Roland Barthes and Umberto Eco, and affiliated trans-Atlantically to the semiotics of C.S. Peirce and media

analyses of Marshall McLuhan ("media is message"). "mediology" is in dialectical revolt against its parent thought-system. Determined not to lapse back into the uncritical empiricism and psychologism with which semiology broke, mediology is just as resolved to dispel the cult or illusion of the signifier as the be-all-and-end-all, slough off the scholasticism of the code, and recover the world in all its mediatized materiality. In this enterprise its ally is the work of French historians of mentalities, of the hard and evolutionary sciences, and of the technologies of transmission (from stylus and clay to quill and parchment to press and paper to mouse and screen). Written with Debray's customary brio, *Media Manifestos* is no mere contribution to the vogue of "media studies." It remains steeped in the intellectual culture of Louis Althusser and Michel Foucault, indebted to the neolithic anthropology of Leroi-Gourhan and the study of science and technology of Serres and Latour, informed by the material histories of the Annales school, yet plugged into the audiovisual culture of today's "videosphere" (as against the printerly "graphosphere" of yesterday, and the scriptorly "logosphere" of the day before that). Debray's work turns a neologism ("mediology") into a tool-kit with which to rethink the whole business of mediation from the city-state to the internet.

Courbet's Realism Michael Fried 1992-11-15 "This book," Michael Fried's work opens, 'was written not so much chapter by chapter as painting by painting over a span of roughly ten years.' Courbet's Realism is a magnificent work and its very first sentence brings us up against the qualities of mind of its author, qualities that make it as impressive as it is. It allows us to reconstruct the keen eye, the commitment to perception, the gift of rapt concentration, the conviction that great paintings are not necessarily understood easily, and the further conviction that a great painter deserves to get from us as good as he gives. By drawing on these qualities, Fried achieves something out of reach for all but a handful of his colleagues. In his writing, art history takes on some of the character of art itself. It is driven by the same stubborn resolve to open our eyes."—Richard Wollheim, San Francisco Review of Books Courbet's Realism is clearly a major contribution to the highly active field of Courbet studies. . . . But to contribute here and now is necessarily also to contribute to central debates about art history itself, and so the book is also—I hesitate to say 'more importantly,' because of the way object and method are woven together in it—a major contribution to current attempts to rethink the foundations and objects of art history. . . . It will not be an easy book to come to terms with; for all its engagement with contemporary literary theory and related developments, it is not an application of anything, and its deeply thought-through arguments will not fall easily in line with the emerging shapes of the various 'new art histories' that tap many of the same theoretical resources. At this moment, there may be nothing more valuable than such a work."—Stephen Melville, Art History

Origins, Imitation, Conventions James S. Ackerman 2002-03-29 Twelve studies by eminent art historian James S. Ackerman. This collection contains studies written by art historian James Ackerman over the past decade. Whereas Ackerman's earlier work assumed a development of the arts as they responded to

social, economic, political, and cultural change, his recent work reflects the poststructural critique of the presumption of progress that characterized Renaissance and modernist history and criticism. In this book he explores the tension between the authority of the past—which may act not only as a restraint but as a challenge and stimulus—and the potentially liberating gift of invention. He examines the ways in which artists and writers on art have related to ancestors and to established modes of representation, as well as to contemporary experiences. The "origins" studied here include the earliest art history and criticism; the beginnings of architectural drawing in the Middle Ages and Renaissance; Leonardo Da Vinci's sketches for churches, the first in the Renaissance to propose supporting domes on sculpted walls and piers; and the first architectural photographs. "Imitation" refers to artistic achievements that in part depended on the imitation of forms established in practices outside the fine arts, such as ancient Roman rhetoric and print media. "Conventions," like language, facilitate communication between the artist and viewer, but are both more universal (understood across cultures) and more fixed (resisting variation that might diminish their clarity). The three categories are closely linked throughout the book, as most acts of representation partake to some degree of all three.

Caravaggio and Pictorial Narrative Lorenzo Pericolo 2011 This publication on the short-lived, irascible artist Caravaggio (1573-1610) re-establishes his significant and innovative role in the history of artistic creation, and in particular as a master of dramatic and realistic story-telling.

Plant Life of the Dolomites Erika Pignatti 2013-12-05 The landscape and vegetation of the Dolomites have characteristics that are very particular. Some 2300 species live here, about a fifth of the flora in Europe as a whole. This book depicts what the plant cover of the Dolomites is composed of, how it was formed, and what future evolution may bring. The data presented is based on the authors' combined botanical research, which consists of thousands of surveys throughout the entire region of the Dolomites. To explain the vegetation, 106 plant communities are described in detailed datasheets. Biological, geological, climatic and physical-chemical parameters are given for each plant community, including a description of the habitat, the indicator species, the floristic composition, distribution, conservation, and alteration risks, as well as a distribution map and a photo of the association. The associations are grouped into habitats, such as the human habitat, natural forests and meadows on the valley floor, the coniferous forest belt, screes, alpine vegetation on granite, porphyry, and volcanic rock, as well as on dolomite and limestones. In closing, the authors make a case for using the scientific information provided in the book for the conservation of the Dolomites, the heritage of all humanity. Additional in-depth analysis will be presented in the supplementary volumes "Plant Life of the Dolomites: Vegetation Tables" and "Plant Life of the Dolomites: Atlas of Flora."
