**Contexts of Physiotherapy Practice** Joy Higgs 2017-02-28 This book provides comprehensive coverage of the key issues and perspectives in the current practice of physiotherapy, focussing on the issues that are not taught in 'clinical' texts yet that underpin professional practice. The book helps students gain a good understanding of the physiotherapy profession. It will introduce students to the key practice issues included in professional entry curricula: history of the profession, the workforce and roles of physiotherapists, ethics, law, reflective practice, clinical reasoning, teamwork, and other professional issues within the field of physiotherapy.

Education in Palliative Care Bee Wee 2007-02-22 Despite the fact that most palliative care educators are involved in teaching, there is little literature devoted to education specifically

within palliative care. This book bridges that gap, giving a wide-ranging, global view of palliative care education. It offers theoretical and practical insights, along with specific suggestions for developing knowledge and skills for teaching. It also contains extensive accounts of important contextual matters which influence the range and quality of palliative care education, including: interprofessional learning; continuing professional development; evaluation; and educational leadership. The development of palliative care as a clinical speciality is increasingly conducted at an international level, and a special feature of this book is the inclusion of chapters reviewing palliative care education in each continent. This enables practitioners and teachers to share knowledge across diverse healthcare systems and cultures. There is also an acknowledgement of the multi-professional team involved in palliative care, as education and training are looked at from the perspectives of doctors, nurses, and allied health professionals. The book is split into three distinct parts: Part 1 - sets the scene for existing palliative care education, both in the UK and internationally. Part 2 - focuses on the theory underpinning each aspect of teaching, learning and assessment, and then examines the practicalities of delivering these in the clinical setting. Part 3 - explores ways of building and nurturing a culture of learning in palliative care, whether as an individual or as an organization.

**Reablement Services in Health and Social Care** Valerie Ebrahimi 2018-03-16 This ground-breaking text book introduces the theoretical underpinnings and practical considerations of the growing area reablement. With contributions from a number of professions including occupational therapy, nursing and social work this book encourages and supports collaborative working. It also offers service user, carer and support worker perspectives, in order to offer a rounded introduction to effective reablement practices. Reablement Services in Health and Social Care develops the knowledge and understanding of students in this field on a wide range of courses – from nursing and occupational therapy to social work, physiotherapy and beyond. It may also appeal to support staff and associated professionals already working in reablement services and associated fields of enquiry.

**Handbook of Qualitative Health Research for Evidence-Based Practice** Karin Olson 2015-10-12 This progressive reference redefines qualitative research as a crucial component of evidence-based practice and assesses its current and future impact on healthcare. Its introductory section explains the value of sociocultural context in case conceptualization, and ways this evidence can be integrated with quantitative findings to inform and transform practice. The bulk of the book's chapters review qualitative research in diverse areas, including pain, trauma, heart disease, COPD, and disabling conditions, and examine ways of effectively evaluating and applying qualitative data. This seismic shift in perception moves the healing professions away from traditional one-size-fits-all thinking and toward responsive, patient-centered care. Among the topics in the Handbook: ·Examining qualitative alternatives to categorical representation. ·The World Health Organization model of health: what evidence is needed? ·Qualitative research in mental health and mental illness. ·Qualitative evidence in pediatrics. ·The contribution of qualitative research to medication adherence. ·Qualitative evidence in health policy analysis. The Handbook of Qualitative Health Research for Evidence-Based Practice offers health and clinical psychologists, rehabilitation specialists, occupational and physical therapists, nurses, family physicians and other primary care providers new ways for understanding patients' health-related experiences and opens up new ways for developing interventions intended to improve health outcomes.

*Interprofessional Rehabilitation* Sarah G. Dean 2012-07-16 *Interprofessional Rehabilitation: a Person-Centred Approach* is a concise and readable introduction to the principles and practice of a person-centred interprofessional approach to rehabilitation, based upon a firm scientific evidence base. Written by a multi-contributor team of specialists in physiotherapy, occupational therapy, nursing, psychology and rehabilitation medicine, this text draws together common themes that cut across the different professional groups and the spectrum of health conditions requiring rehabilitation, and sets out a model of practice that is tailored to the specific needs of the client. Showing interprofessionalism at work in a range of clinical contexts, the book argues that effective rehabilitation is best conducted by well-integrated teams of specialists working in an interdisciplinary way, with the client or patient actively involved in all stages of the process. This book will be essential reading for students preparing for practice in an increasingly interprofessional environment, and will be of interest to any health care practitioner keen to understand how an integrated approach to rehabilitation can benefit their clients.

International Partnerships for Strengthening Health Care Workforce Capacity: Models of Collaborative Education Jeanne Mahoney Leffers 2018-07-31 A critical problem in resource-scarce countries across the globe is the shortage of appropriately trained health care providers. According to the World Health Organization, the current global health workforce shortage of 7.2 million providers is estimated to increase to 12.9 million by 2035. This disproportionately affects resource-scarce countries, denying basic health care to millions and limiting access to life-saving treatments. Due to limited resources in these countries, not enough health professionals receive training, few have the opportunity for continuing education, and the ability to develop or implement educational programs and curricula is constrained. Additionally, many existing providers choose to emigrate in pursuit of professional advancement opportunities, contributing to the overall shortage of qualified health care providers in these environments. Efforts to strengthen health workforce capacity not only increases access, safety and availability of care, but is critical to building resilient health systems capable of caring for the world's neediest populations. This requires not only cultivating new health care providers, but also providing ongoing professional development to retain and support current providers, advancing the level of practice in accordance with current clinical science, cultivating educators, and enhancing training curricula. It is critical also to contribute to the limited body of research documenting the effectiveness and impact of various models of collaborative education and partnership to improve health worker training and retention. This Research Topic examines strategies for building health workforce capacity through the prism of educational partnerships, offering significant examples of effective models of international collaborative education as well as insight and guidance on the structure and operation of successful global partnerships. Collectively, the 31 articles accepted and included in this eBook represent a diversity of health professions and geographies across academic, non-governmental organizations and other global partnership forms. The published manuscripts highlight various elements of partnerships with several consistent themes emerging: capacity building, local empowerment, mutual trust and respect, long-term commitment, equity, collaboration, and the importance of integrating theory and practice, for a balance of academic and clinical development. The manuscripts provide examples of partnership and educational programs that are in the formative, early stages of implementation and others which have been sustained long term, some for decades. The following eBook is divided into two parts, with each part broken down into sections. Part I of the eBook includes 18 manuscripts that showcase long-term educational programs that strongly exemplify multiple, foundational aspects of international partnerships in education including mutual collaboration and project management, empowerment of host partners to lead and sustain programs, and capacity building. While individual manuscripts included in Part I look broadly at multiple aspects of successful, international partnerships in education,

Part II manuscripts focus intently on one-two elements. Part II includes 13 articles that highlight partnership through short- rather than long-term educational initiatives as well as program development and broad academic partnerships. This Research Topic was sponsored by Health Volunteers Overseas - a United States based non-profit that collaborates with over eighty international universities and health institutions to send volunteer health professionals to low-resource countries to provide continuing education, train the trainer courses, professional support, and consultation on academic program and curricula development.
