Integrated Procedures in Facial Cosmetic Surgery Seied Omid Keyhan 2021-06-01 Physical attractiveness of the face has a significant impact on the social life and daily interaction of individuals as well as one's general perception of life. Proper surgical planning for aesthetic facial surgery requires a meticulous analysis of the patient's current and desired facial features from the perspective of both soft and hard tissues. Significantly greater changes to facial aesthetics can be made via the alteration of the main bony structures of the face than by alteration of soft tissue and skin alone. Various surgical and clinical techniques are available for the augmentation, reduction or refinement of the most prominent aspects of facial aesthetics, such as alterations to the cheek, chin, nose, para-nasal area, as well as the angle of the jaw. These techniques can be categorized as office-based or non-invasive techniques (filler injections, facial liposculpture or liposuction to modify the soft tissue of the face) and invasive surgical interventions such as facial prosthesis and maxillofacial osteotomies. In order to achieve the optimum aesthetic results for patients who undergo bi-maxillary or mono-maxillary orthognathic surgery, it is of paramount importance to utilize a hard and soft-tissue integrated approach. These integrated approaches have utilized the latest techniques in 3-dimentional printing, computer-assisted surgery, tissue engineering and stem-cell therapy in order to achieve positive and lasting outcomes. *Integrated Procedures in Facial Cosmetic Surgery* includes chapters that focus on facial analysis and clinical evaluation and best practices in surgical techniques such as: principles of bone contouring; genioplasty; mentoplasty; malarplasty; rhinoplasty; orthognathic surgery and intra-oral plastic surgery; lifting procedures like blepharoplasty; surgical approaches to cleft lip and palate surgery; as well as the principles of facial photography. Written by a team of renowned international experts, this textbook features over 900 original photographs, fully illustrating each procedure in a stepwise manner. *Integrated Procedures in Facial Cosmetic Surgery* is an essential companion for oral and maxillofacial surgeons, plastic surgeons and otolaryngologists, as well as for cosmetic surgeons and clinical residents dealing with face rejuvenation. Its contents will also be of interest to dentists, prosthodontists, periodontists, radiologists, general surgeons, and dermatologists.

Jaws Sandra Kahn 2018-04-10 There's a silent epidemic in western civilization, and it is right under our noses. Our jaws are getting smaller and our teeth crooked and crowded, creating not only aesthetic challenges but also difficulties with breathing. Modern orthodontics has persuaded us that braces and oral devices can correct these problems. While teeth can certainly be straightened, what about the underlying causes of this rapid shift in oral evolution and the health risks posed by obstructed airways? Sandra Kahn and Paul R. Ehrlich, a pioneering orthodontist and a world-renowned evolutionist, respectively, present the biological, dietary, and cultural changes that have driven us toward this major health challenge. They propose simple adjustments that can alleviate this developing crisis, as well as a major alternative to orthodontics that promises more significant long-term relief. Jaws will change your life. Atlas Kai-cheung Dung 2012-07-17 Set in the long-lost City of Victoria (a fictional world similar to Hong Kong), *Atlas* is written from the unified perspective of future archaeologists struggling to rebuild a thrilling metropolis. Divided into four sections—"Theory," "The City," "Streets," and "Signs"—the novel reimagines Victoria through maps and other historical documents and artifacts, mixing real-world scenarios with purely imaginary people and events while incorporating anecdotes and actual and fictional social commentary and critique. Much like the quasi-fictional adventures in map-reading and remapping explored by Paul Auster, Jorge Luis Borges, and Italo Calvino, Dung Kai-cheung's novel challenges the representation of place and history and the limits of technical and scientific media in reconstructing a history. It best exemplifies the author's versatility and experimentation, along with China's rapidly evolving literary culture, by blending fiction, nonfiction, and poetry in a story about succeeding and failing to recapture the things we lose. Playing with a variety of styles and subjects, Dung Kai-cheung inventively engages with the fate of Hong Kong since its British "handover" in 1997, which officially marked the end of colonial rule and the beginning of an uncharted future.

A Small Dose of Toxicology Steven G. Gilbert 2004-02-18 Everyday, we come into contact with many relatively harmless substances that could, at certain concentrations, be toxic. While the field of toxicology has numerous texts devoted to aspects of biology, chemis

ANATOMY & LIP ENHANCEMENT NABILA AZIB, MD Our 360 degrees approach to lip enhancement Due to their complexity, the structure and function of the orbicularis oris muscle particularly caught our attention. This unusual circular muscle around the buccal opening, which is not attached to any bone, consists of intertwined fibres that simultaneously act as a dilator and a sphincter. Moreover, the peripheral fibres of this muscle are interlaced with the peribuccal muscles enabling the infinite variations of facial expressiveness. It is essential to understand all of these elements so that they are rigorously safeguarded when undergoing the various type of treatment we can offer. The second common thread in our book is based on highly practical aspects of the various procedures being proposed. From working environment and preparation of the equipment through well whether anaesthesia is indicated and what operating technique is recommended, the contributors have described their personal technical preferences in a context of consistency in this collective effort. Thus we have addressed lip rejuvenation and augmentation with the same balance. Although most of the authors routinely use hyaluronic acid in the course of treatment, it seems to us indispensable to pay special attention to techniques based on the grafting of adipose tissue. The use of adipose tissue, which demands mastery of surgical techniques, has shown itself to be efficient and holds yet more potential in many applications because of the way in which this type of tissue develops in situ after fat grafting. Physicians and surgeons involved in the lip enhancement are working to the same end. We should know all about the sites where we make our injections and to need to analyse with rigour the objective established together with the patient. We all have to take into account the natural balance of the various volumes when remodelling lips to ensure a pretty smile that brings pleasure all around. In this, as in other areas, modesty and caution are the watchwords. In writing and publishing this work Expert 2 Expert attempts to build a bridge between the anatomical knowledge essential to our praxis and the routine practice of lip enhancement procedures. Philippe Garcia, MD

Virgil, Aeneid, 4.1-299 Ingo Gildenhard 2012 Love and tragedy dominate book four of Virgil's most powerful work, building on the violent emotions invoked by the storms, battles, warring gods, and monster-plagued wanderings of the epic's opening. Destined to be the founder of Roman culture, Aeneas, nudged by the gods, decides to leave his beloved Dido, causing her suicide in pursuit of his historical destiny. A dark plot, in which erotic passion culminates in sex, and sex leads to tragedy and death in the human realm, unfolds within the larger horizon of a supernatural sphere, dominated by power-conscious divinities. Dido is Aeneas' most significant other, and in their encounter Virgil explores timeless themes of love and loyalty, fate and fortune, the justice of the gods, imperial ambition and its victims, and ethnic differences. This course book offers a portion of the original Latin text, study questions, a commentary, and interpretative essays. Designed to stretch and stimulate readers, Ingo Gildenhard's incisive commentary will be of particular interest to students of Latin at both A2 and undergraduate level. Injections in Aesthetic Medicine Mario Goisis 2013-12-17 The use of injectables, known as dermal fillers, is becoming ever more popular in aesthetic medicine. Full-face and full-body treatments using such fillers are increasingly substituting for various surgical techniques; not only do they provide immediate results at a lower cost, but they also avoid the use of general anesthesia and shorten the recovery period. In addition, dermal fillers can be successfully used for body remodeling, for example in patients with bow legs and those requiring breast remodeling. Facial Topography Joel E. Pessa 2012-04-10 Facial Topography: Clinical Anatomy of the Face provides you with a critical roadmap for navigating the underlying anatomy of the face. It is the first work of its type that uses superb cadaver dissections paired with detailed medical illustrations to depict the soft tissue surface landmarks of the face—shapes, contours, creases, and lines—that can help you predict the course and location of deeper structures. The difference in the shapes of structures and their relationship to one another determines the unique and distinct appearance of each individual. This anatomic information is critical to diagnosing changes in facial topography that occur with age and in determining the best approach for augmenting and rejuvenating the aging face. The beautifully illustrated, clinically relevant, semi-atlas work is particularly useful for all physicians performing facial procedures. It is packed with clinical information that will help you improve your outcomes. Emphasis is placed on describing surface landmarks to help predict the location of deeper structures. This knowledge increases the safety of any facial procedure, because the surgeon knows the course and location of blood vessels, muscles, and nerves. This is an invaluable guide for determining the best placement of injectables to achieve a predictable and aesthetic result and to avoid complications. It will also help the surgeon understand the ideal placement of fillers for facial augmentation. In addition, the basic dissections provide essential information for all residents and practitioners operating in the face. Additionally, anatomic tenets are described that can be applied to any anatomic region and key clinical points are highlighted throughout. Comprehensive Coverage This book starts with the central forehead, a key area of facial expression. It then proceeds to the cheek, an area of current interest, followed by the eyelids, nose, temporal fossa, and preauricular region. It ends with a discussion of the lips and chin, two distinct anatomic regions, but ones that share a common denominator. Digital Media One DVD with video demonstrates dissections and clinical applications in each anatomic area of the face.
