This Life At Play Girish Karnad 2021-05-19 Girish Karnad was one of modern India's greatest cultural figures: an accomplished actor, a path-breaking director, an innovative administrator, a clear-headed and erudite thinker, a public intellectual with an unwavering moral compass, and above all, the most extraordinarily gifted playwright of his times. This Life at Play, translated from the Kannada in part by Karnad himself and in part by Srinath Perur, covers the first half of his remarkable life - from his childhood in Sirsi and his early engagement with local theatre, his education in Dharwad, Bombay and Oxford, to his career in publishing, his successes and travails in the film industry, and his personal and writerly life. Moving and humorous, insightful and candid, these memoirs provide an unforgettable glimpse into the life-shaping experiences of a towering genius, and a unique window into the India in which he lived and worked.

Crime And Capitalism David Greenberg 2010-06-10 "This book is superb in every way.... [It] is the only book that attempts to put into perspective just what the possible relationship between praxis and Marxist criminology might (should) be." --Eleanor Miller, University of Wisconsin, Milwaukee In this expanded and

updated second edition of a revered reader in Marxist criminology, editor David F. Greenberg brings together writings about crime that range from classic articles by Karl Marx and Friedrich Engels to a variety of contemporary essays. Taking an explicitly Marxist point of view, the articles deal with various aspects of criminology, including organized crime, delinquency, urban crime, criminal law, and criminal justice. To the original text, Greenberg has added pieces on race and crime, gender and crime, rape, arson for profit, and auto theft. With extensive prefatory material prepared by Greenberg, as well as editorial notes, and a glossary of Marxist terminology, *Crime and Capitalism* is an indispensable text for students and professionals in the fields of criminology, criminal justice, social history, and sociology.

Different: Gender Through the Eyes of a Primatologist Frans de Waal 2022-04-05
"Every new book by Frans de Waal is a cause for excitement, and this one is no different. A breath of fresh air in the cramped debate about the differences between men and women. Fascinating, nuanced, and very timely." –Rutger Bregman, author of *Humankind: A Hopeful History*
In *Different*, world-renowned primatologist Frans de Waal draws on decades of observation and studies of both human and animal behavior to argue that despite the linkage between gender and biological sex, biology does not automatically support the traditional gender roles in human societies. While humans and other primates do share some behavioral differences, biology offers no justification for existing gender inequalities. Using chimpanzees and bonobos to illustrate this point—two ape relatives that are genetically equally close to humans—de Waal challenges widely held beliefs about masculinity and femininity, and common assumptions about authority, leadership, cooperation, competition, filial bonds, and sexual behavior. Chimpanzees are male-dominated and violent, while bonobos are female-dominated and peaceful. In both species, political power needs to be distinguished from physical dominance. Power is not limited to the males, and both sexes show true leadership capacities. *Different* is a fresh and thought-provoking approach to the long-running debate about the balance between nature and nurture, and where sex and gender roles fit in. De Waal peppers his discussion with details from his own life—a Dutch childhood in a family of six boys, his marriage to a French woman with a different orientation toward gender, and decades of academic turf wars over outdated scientific theories that have proven hard to dislodge from public discourse. He discusses sexual orientation, gender identity, and the limitations of the gender binary, exceptions to which are also found in other primates. With humor, clarity, and compassion, *Different* seeks to broaden the conversation about human gender dynamics by promoting an inclusive model that embraces differences, rather than negating them.

The Naked Ape Desmond Morris 2010-11-16 FIFTIETH ANNIVERSARY EDITION - WITH A NEW PREFACE BY THE AUTHOR Here is the Naked Ape at his most primal - in love, at work, at war. Meet man as he really is: relative to the apes, stripped of his veneer as we see him courting, making love, sleeping, socialising, grooming, playing. Zoologist Desmond Morris's classic takes its place alongside Darwin's Origin of the Species, presenting man not as a fallen angel, but as a risen ape, remarkable in his resilience, energy and imagination, yet an animal nonetheless, in danger of forgetting his origins. With its penetrating insights on man's beginnings, sex life, habits and our astonishing bonds to the animal kingdom, The Naked Ape is a landmark, at once provocative, compelling and timeless. 'Original, provocative and brilliantly entertaining. It's the sort of book that changes people's lives' Sunday Times

The Waterside Ape Peter H. Rhys Evans 2019-07-24 Why are humans so fond of water? Why is our skin colour so variable? Why aren't we hairy like our close ape relatives? A savannah scenario of human evolution has been widely accepted primarily due to fossil evidence; and fossils do not offer insight into these questions. Other alternative evolutionary scenarios might, but these models have been rejected. This book explores a controversial idea – that human evolution was intimately associated with watery habitats as much or more than typical savannahs. Written from a medical point of view, the author presents evidence supporting a credible alternative explanation for how humans diverged from our primate ancestors. Anatomical and physiological evidence offer insight into hairlessness, different coloured skin, subcutaneous fat, large brains, a marine-type kidney, a unique heat regulation system and speech. This evidence suggests that humans may well have evolved, not just as savannah mammals, as is generally believed, but with more affinity for aquatic habitats – rivers, streams, lakes and coasts. Key Features: Presents the evidence for a close association between riparian habitats and the origin of humans Reviews the "savannah ape" hypothesis for human origins Describes various anatomical adaptations that are associated with hypotheses of human evolution Explores characteristics from the head and neck such as skull and sinus structures, the larynx and ear structures and functions Corroborates a novel scenario for the origin of human kind '... a counterpoint to the textbooks or other books which deal with human evolution. I think readers will see it as a clearly written,

well-supported discussion of an alternative perspective on human origins'.
–Kathlyn Stewart, Canadian Museum of Nature, Ottawa 'There is a pressing need to expand discussions of human evolution to include non-anthropocentric narratives that use comparative data. Dr Rhys-Evans' specific expertise and experience with the human head, neck, ears, throat, mouth and sinuses, provides him with a distinct perspective from which to approach the subject of human evolution. Moreover, his understanding of non-anthropocentric views of human evolution (water-based models), allow him to apply a biological approach to the subject, missing in more traditional (savannah-based) models'. –Stephen Munro, National Museum of Australia

Monkey Desmond Morris 2013-06-15 Monkeys populate our culture, from the adorable hijinks of Curious George and the loyal friendship between Aladdin and Abu to the menacing gait of the winged ones in The Wizard of Oz. We visit them in zoos and even sometimes keep them as pets à la Catherine de Medici and Michael Jackson. As renowned zoologist Desmond Morris shows, it is not surprising that we are so attracted to them. While we sometimes view monkeys as trivial or comic, their mischievousness is delightful, and their urge to explore and love of activity fascinate us. Monkey unpacks human attitudes toward these animals, tracing our connection with them throughout history. Morris reveals that our fascination with monkeys extends through many cultures and eras—ancient Egyptians revered baboons, monkey deities featured prominently in ancient Chinese and Japanese religions, and sacred status was given to the langur monkey by some groups in India. He also describes how our relationship with monkeys has changed since Darwin, and even become more troubled—this in-depth knowledge of our own origins amplifies our identification with and concern for the idea of monkeys' primitivism and destructive behaviors. Drawing a vibrant picture of these beguiling animals and their continued popularity with humans, Monkey brings a new understanding to our complicated relationship with the ever-curious George.

Cats in Art Desmond Morris 2017 The cat--that most graceful, stubborn, and agile of animals--has been a favorite subject of artists the world over from prehistory to the modern day. A spectacular 7,000-year-old engraving in Libya depicts a catfight. Figures modeled by the Babylonians remind us of their belief that the souls of priests were escorted to paradise by a helpful cat. Pablo Picasso was known to have loved cats and famously portrayed them as savage predators. In Victorian times, cats were depicted in loving family groups with mothers caring for their playful kittens. Today, the cat is one of the most popular domestic pets on the planet, and feline art is a hugely popular theme across the world. In his latest eye-catching book, best-selling author Desmond Morris tells the compelling story of cats in art. He explores feline art in its many forms, tracing its history from ancient rock paintings and spectacular Egyptian art to the work of old masters, avant-garde representations, and the depiction of cats in cartoons. Morris discusses the various ways in which artists have approached the subject throughout history, weaving illuminating stories with rarely seen images. The result is a beautifully illustrated book that will delight anyone with a Kitty, Max, or Tigger in their life.

War, Peace, and Human Nature Douglas P. Fry 2015-02 "The chapters in this book [posit] that humans clearly have the capacity to make war, but since war is absent in some cultures, it cannot be viewed as a human universal. And counter to frequent presumption, the actual archaeological record reveals the recent emergence of war. It does not typify the ancestral type of human society, the nomadic forager band, and contrary to widespread assumptions, there is little support for the idea that war is ancient or an evolved adaptation. Views of human nature as inherently warlike stem not from the facts but from cultural views embedded in Western thinking"--Amazon.com.
