*Agroecology and Regenerative Agriculture* Vandana Shiva 2022 The book is an interdisciplinary synthesis of research and practice carried out over decades by leaders of the agroecology and regenerative organic agriculture movement. It provides detailed analysis of the multiple crises we face due to chemical and industrial agriculture, including land degradation, water depletion, biodiversity erosion, climate change, agrarian crises, and health crises. The book lays out biodiversity based organic farming and agroecology as the road map for the future of agriculture and sustainable food systems, both locally and globally. With detailed scientific evidence, *Agroecology & Regenerative Agriculture* shows how ecological agriculture based on working with nature rather than abasing ecological laws can regenerate the planet, the rural economy, and our health.

*The Gender and Science Reader* Muriel Lederman 2001 The Gender and Science Reader brings together key articles in a comprehensive investigations of the nature and practice of science.

*The Essential Agrarian Reader* Norman Wirzba 2004 In this remarkable anthology, 15 essays--from Wendell Berry, Vandana Shiva, and others--call upon people to celebrate the gifts of the earth through honest work and respect for the land.

**Oneness vs. the 1%** Vandana Shiva 2020-08-31 With a new epilogue about Bill Gates's global agenda and how we can resist the billionaires' war on life Widespread poverty and malnutrition, an alarming refugee crisis, social unrest, and economic polarization have become our lived reality as the top 1% of the world's seven-billion-plus population pushes the planet—and all its people—to the social and ecological brink. In *Oneness vs. the 1%*, Vandana Shiva takes on the Billionaires Club of Gates, Buffet, and Zuckerberg, as well as other modern empires whose blindness to the rights of people, and to the destructive impact of their construct of linear progress, have wrought havoc across the world. Their single-minded pursuit of profit has undemocratically enforced uniformity and monocultures, division and separation, monopolies and external control—over finance, food, energy, information, healthcare, and even relationships. Basing her analysis on explosive, little-known facts, Shiva exposes the 1%'s model of philanthrocapitalism, which is about deploying unaccountable money to bypass democratic structures, derail diversity, and impose totalitarian ideas based on One Science, One Agriculture, and One History. She calls for the “resurgence of real knowledge, real intelligence, real wealth, real work, real well-being,” so that people can reclaim their right to: Live Free. Think Free. Breathe Free. Eat Free.

**The Vandana Shiva Reader** Vandana Shiva 2014-12-18 "Her great virtue as an advocate is that she is not a reductionist. Her awareness of the complex connections among economy and nature and culture preserves her from oversimplification. So does her understanding of the importance of diversity." -- Wendell Berry, from the foreword Motivated by agricultural devastation in her home country of India, Vandana Shiva became one of the world's most influential and highly acclaimed environmental and antiglobalization activists. Her groundbreaking research has exposed the destructive effects of monocultures and commercial agriculture and revealed the links between ecology, gender, and poverty. In *The Vandana Shiva Reader*, Shiva assembles her most influential writings, combining trenchant critiques of the corporate monopolization of agriculture with a powerful defense of biodiversity and food democracy. Containing up-to-date data and a foreword by Wendell Berry, this essential collection demonstrates the full range of Shiva's research and activism, from her condemnation of commercial seed technology, genetically modified organisms (GMOs), and the international agriculture industry's dependence on fossil fuels, to her tireless documentation of the extensive human costs of ecological deterioration. This important volume illuminates Shiva's profound understanding of both the perils and potential of our

interconnected world and calls on citizens of all nations to renew their commitment to love and care for soil, seeds, and people.

*Charting a New Course for Feminist Psychology* Lynn H. Collins 2002 Presents innovative efforts to advance feminist psychological theory, research, pedagogy, and practice.

*Reinventing Eden* Carolyn Merchant 2013-03-12 This revised edition of Carolyn Merchant's classic *Reinventing Eden* has been updated with a new foreword and afterword. Visionary quests to return to the Garden of Eden have shaped Western Culture. This book traces the idea of rebuilding the primeval garden from its origins to its latest incarnations and offers a bold new way to think about the earth.

*The Fight Against Monsanto's Roundup* Michael Cohen 2019-01-08 "We are being poisoned, and this book is sounding a well-informed alarm. Read it. Get educated and then join the thousands rising up against those who care more for profit than the health of our bodies and our earth."—Eve Ensler, New York Times bestselling author  
Chemical poisons have infiltrated all facets of our lives – housing, agriculture, work places, sidewalks, subways, schools, parks, even the air we breathe. More than half a century since Rachel Carson issued *Silent Spring* – her call-to-arms against the poisoning of our drinking water, food, animals, air, and the natural environment – *The Fight Against Monsanto's Roundup* takes a fresh look at the politics underlying the mass use of pesticides and the challenges people around the world are making against the purveyors of poison and the governments that enable them. The scientists and activists contributing to *The Fight Against Monsanto's Roundup*, edited by long-time Green activist Mitchel Cohen, explore not only the dangers of glyphosate – better known as "Roundup" – but the campaign resulting in glyphosate being declared as a probable cancer-causing agent. In an age where banned pesticides are simply replaced with newer and more deadly ones, and where corporations such as Monsanto, Bayer, Dow and DuPont scuttle attempts to regulate the products they manufacture, what is the effective, practical, and philosophical framework for banning glyphosate and other pesticides? *The Fight Against Monsanto's Roundup: The Politics of Pesticides* takes lessons from activists who have come before and offers a radical approach that is essential for defending life on this planet and creating for our kids, and for ourselves, a future worth living in.

**The Gift of Good Land** Wendell Berry 2018-09-05 The essays in *The Gift of Good Land* are as true today as when they were first published in 1981; the problems addressed here are still true and the solutions no nearer to hand. The insistent theme of this book is the interdependence, the wholeness, the oneness of people, land, weather, animals, and family. To touch one is to tamper with them all. We live in one functioning organism whose separate parts are artificially isolated by our culture. Here, Berry develops the compelling argument that the “gift” of good land has strings attached. We have it only on loan and only for as long as we practice good stewardship.

*Making Peace with the Earth* Vandana Shiva 2013 *Making Peace with the Earth* outlines how a paradigm shift to earth-centred politics and economics is our only chance of survival and how collective resistance to corporate exploitation can open the way to a new environmentalism."--pub. desc.

*Biopolitics* Vandana Shiva 1995-09-04 Biotechnology is the single most powerful bundle of new technologies currently under development. It is also the most intrusive and determinative technology relating to nature generally and the human body specifically. This Reader brings together some of the most important work from feminists and environmentalists critical of the headlong rush into what is likely to prove a technological minefield. As such it will be essential reading for students, scholars and activists in social studies of science, women's studies, development and environmental studies.

*From Field to Fork* Paul B. Thompson 2015-05-12 Tapping into surging interest in the impacts of our food choices on ourselves and the wider world, Paul B. Thompson provides readers with a guided tour of the landscape of food ethics, applying more than thirty years of experience working with farmers, agricultural researchers, and food system activists. Thompson follows the ethics of diet and health from the ancient world to our current obesity crisis and goes on to examine diet and health issues, livestock welfare, world hunger, social injustice in food systems, environmental ethics, Green Revolution technology, and GMOs from a philosophical standpoint.

**The Essential Agrarian Reader** Norman Wirzba 2010-09-29 " WITH A FOREWORD BY BARBARA KINGSOLVER A compelling worldview with advocates from around the globe, agrarianism challenges the

shortcomings of our industrial and technological economy. Not simply focused on farming, the agrarian outlook encourages us to develop practices and policies that promote the health of land, community, and culture. Agrarianism reminds us that no matter how urban we become, our survival will always be inextricably linked to the precious resources of soil, water, and air. Combining fresh insights from the disciplines of education, law, history, urban and regional planning, economics, philosophy, religion, ecology, politics, and agriculture, these original essays develop a sophisticated critique of our culture's current relationship to the land, while offering practical alternatives. Leading agrarians, including Wendell Berry, Vandana Shiva, Wes Jackson, Gene Logsdon, Brian Donahue, Eric Freyfogle, and David Orr, explain how our goals should be redirected toward genuinely sustainable communities. These writers call us to an honest accounting and correction of our often destructive ways. They suggest how our society can take practical steps toward integrating soils, watersheds, forests, wildlife, urban areas, and human populations into one great system—a responsible flourishing of our world and culture.

**Ecofeminism** Vandana Shiva 2014-03-13 This groundbreaking work remains as relevant today as when it was first published. Two of Zed's best-known authors argue that ecological destruction and industrial catastrophes constitute a direct threat to everyday life, the maintenance of which has been made the particular responsibility of women. In both industrialized societies and the developing countries, the new wars the world is experiencing, violent ethnic chauvinisms and the malfunctioning of the economy also pose urgent questions for ecofeminists. Is there a relationship between patriarchal oppression and the destruction of nature in the name of profit and progress? How can women counter the violence inherent in these processes? Should they look to a link between the women's movement and other social movements? Maria Mies and Vandana Shiva offer a thought-provoking analysis of these and many other issues from a unique North-South perspective. They critique prevailing economic theories, conventional concepts of women's emancipation, the myth of 'catching up' development, the philosophical foundations of modern science and technology, and the omission of ethics when discussing so many questions, including advances in reproductive technology and biotechnology. In constructing their own ecofeminist epistemology and methodology, these two internationally respected feminist environmental activists look to the potential of movements advocating consumer liberation and subsistence production, sustainability and regeneration, and they argue for an acceptance of limits and reciprocity and a rejection of exploitation, the

endless commoditization of needs, and violence.

*Water Wars* Vandana Shiva 2016-07-26 Acclaimed author and award-winning scientist and activist Vandana Shiva lucidly details the severity of the global water shortage, calling the water crisis “the most pervasive, most severe, and most invisible dimension of the ecological devastation of the earth.” She sheds light on the activists who are fighting corporate maneuvers to convert the life-sustaining resource of water into more gold for the elites and uses her knowledge of science and society to outline the emergence of corporate culture and the historical erosion of communal water rights. Using the international water trade and industrial activities such as damming, mining, and aquafarming as her lens, Shiva exposes the destruction of the earth and the disenfranchisement of the world's poor as they are stripped of rights to a precious common good. Revealing how many of the most important conflicts of our time, most often camouflaged as ethnic wars or religious wars, are in fact conflicts over scarce but vital natural resources, she calls for a movement to preserve water access for all and offers a blueprint for global resistance based on examples of successful campaigns. Featuring a new introduction by the author, this edition of *Water Wars* celebrates the spiritual and traditional role water has played in communities throughout history and warns that water privatization threatens cultures and livelihoods worldwide.

*Earth Democracy* Vandana Shiva 2015-10-27 World-renowned environmental activist and physicist Vandana Shiva calls for a radical shift in the values that govern democracies, condemning the role that unrestricted capitalism has played in the destruction of environments and livelihoods. She explores the issues she helped bring to international attention—genetic food engineering, culture theft, and natural resource privatization—uncovering their links to the rising tide of fundamentalism, violence against women, and planetary death. Struggles on the streets of Seattle and Cancun and in homes and farms across the world have yielded a set of principles based on inclusion, nonviolence, reclaiming the commons, and freely sharing the earth's resources. These ideals, which Dr. Shiva calls “Earth Democracy,” serve as an urgent call to peace and as the basis for a just and sustainable future.

*Food, Farming and Religion* Gretel Van Wieren 2018-04-24 Although the religious and ethical consideration

of food and eating is not a new phenomenon, the debate about food and eating today is distinctly different from most of what has preceded it in the history of Western culture. Yet the field of environmental ethics, especially religious approaches to environmental ethics, has been slow to see food and agriculture as topics worthy of analysis. This book examines how religious traditions and communities in the United States and beyond are responding to critical environmental ethical issues posed by the global food system. In particular, it looks at the responses that have developed within Jewish, Christian, and Islamic traditions, and shows how they relate to arguments and approaches in the broader study of food and environmental ethics. It considers topics such as land degradation and restoration, genetically modified organisms and seed consolidation, animal welfare, water use, access, pollution, and climate, and weaves consideration of human wellbeing and justice throughout. In doing so, Gretel Van Wieren proposes a model for conceptualizing agricultural and food practices in sacred terms. This book will appeal to a wide and interdisciplinary audience including those interested in environment and sustainability, food studies, ethics, and religion.

*Cultural Studies and Environment, Revisited* Phaedra. C Pezzullo 2013-10-31 The environment is perhaps most misunderstood as a static place, somewhere "out there," separated from the practices of our everyday lives. Given this assumption, environmental movements and concerns have remained mostly marginalized or denigrated in cultural studies publications, conferences, and presentations. Recent global developments have made changing this oversight and, at times, direct resistance to engaging environmental concerns a new priority. This edited collection illustrates an appreciation of the dynamic, palpable, and significant ways the environment permeates culture (and vice versa), as well as a collective commitment to the ways that cultural studies has more to offer—and to learn from—taking environmental matters to heart. Like foundational categories of identity, economics, and historical context, this collection reminds us why the environment is and should be considered relevant to any work done in the name of "cultural studies." Including research from four continents and across media, the authors offer insights on timely topics such as food, tourism, human/animal relations, forests, queer theory, indigenous rights, and water. This book was published as a special issue of Cultural Studies.

Close to Home Vandana Shiva 2014-01-14 It is 20 years since environmental issues were first put on the

international agenda at the Stockholm Conference, and concern for planetary survival has shifted from desertification to acid rain to ozone depletion to biodiversity. The official responses to all the various crises, however, has largely been one of offering technological and managerial 'fixes,' which often fail to address or solve the basic ecological issues. Genuine, viable improvements can only be implemented at ground level, by those most strongly affected by the problem. Because of their location 'on the fringes,' and their traditional role in providing sustenance, it is women who are often able to offer ecological insights that are deeper and richer than the technocratic recipes of international experts, or the responses of men in their own societies. Close to Home emphasises that the environment is not some distant concern, but one that affects the health and well-being of communities on a daily basis. For women, 'the environment' is the place in which we live. The contributions in this book, edited by Vandana Shiva, show how women worldwide are taking action at grass-roots level, battling toxic wastes, low-level radiation and biotechnology in the struggle for truly sustainable community development.

**Monocultures of the Mind** Vandana Shiva 1993-02 Vandana Shiva has established herself as a leading independent thinker and voice for the South in that critically important nexus where questions of development strategy, the environment and the position of women in society coincide. In this new volume, she brings together her thinking on the protection of biodiversity, the implications of biotechnology, and the consequences for agriculture of the global pre-eminence of Western-style scientific knowledge. In lucid and accessible fashion, she examines the current threats to the planet's biodiversity and the environmental and human consequences of its erosion and replacement by monocultural production. She shows how the new Biodiversity Convention has been gravely undermined by a mixture of diplomatic dilution during the process of negotiation and Northern hi-tech interests making money out of the new biotechnologies. She explains what these technologies involve and gives examples of their impact in practice. She questions their claims to improving natural species for the good of all and highlights the ethical and environmental problems posed. Underlying her arguments is the view that the North's particular approach to scientific understanding has led to a system of monoculture in agriculture - a model that is not being foisted on the South, displacing its societies' ecologically sounder, indigenous and age-old experiences of truly sustainable food cultivation, forest management and animal husbandry. This rapidly accelerating process of technology and system transfer is impoverishing huge numbers of

people, disrupting the social systems that provide them with security and dignity, and will ultimately result in a sterile planet in both North and South, In a policy intervention of potentially great significance, she calls instead for a halt, at international as well as local level, to the aid and market incentives to both large-scale destruction of habitats where biodiversity thrives and the introduction of centralised, homogenous systems of cultivation.

**The End of the Megamachine** Fabian Scheidler 2020-09-25 The End of the Megamachine provides a uniquely comprehensive picture of the roots of the destructive forces that are threatening the future of humankind today. Spanning 5000 years of history, the book shows how the three tyrannies of militarized states, capital accumulation and ideological power have been steering both ecosystems and societies to the brink of collapse. With the growing instability of the Megamachine in the 21st century, new dangers open up as well as new possibilities for systemic change, to which everyone can contribute. Originally published in Germany in 2015 to great acclaim, Zero Books presents the first English language edition of *The End of the Megamachine: A Brief History of a Failing Civilization*. “The topic could not be more important. A very valuable and surely timely contribution.” Noam Chomsky

**The Vandana Shiva Reader** Vandana Shiva 2015-01-27 The pioneering environmental activist presents her most influential writings—with an informative introduction by Wendell Berry. Motivated by agricultural devastation in her home country of India, Vandana Shiva became one of the world's most influential environmental and anti-globalization activists. Her groundbreaking research has exposed the destructive effects of monocultures and commercial agriculture and revealed the links between ecology, gender, and poverty. In *The Vandana Shiva Reader*, Shiva assembles her most influential writings, combining trenchant critiques of the corporate monopolization of agriculture with a powerful defense of biodiversity and food democracy. This essential collection demonstrates the full range of Shiva's research and activism, from her condemnation of commercial seed technology, genetically modified organisms (GMOs), and the international agriculture industry's dependence on fossil fuels, to her tireless documentation of the extensive human costs of ecological deterioration. This important volume illuminates Shiva's profound understanding of both the perils and potential of our interconnected world and calls on citizens of all nations to renew their commitment to love and care for soil, seeds, and people.

Who Really Feeds the World? Vandana Shiva 2016-06-28 Debunking the notion that our current food crisis must be addressed through industrial agriculture and genetic modification, author and activist Vandana Shiva argues that those forces are in fact the ones responsible for the hunger problem in the first place. *Who Really Feeds the World?* is a powerful manifesto calling for agricultural justice and genuine sustainability, drawing upon Shiva's thirty years of research and accomplishments in the field. Instead of relying on genetic modification and large-scale monocropping to solve the world's food crisis, she proposes that we look to agroecology—the knowledge of the interconnectedness that creates food—as a truly life-giving alternative to the industrial paradigm. Shiva succinctly and eloquently lays out the networks of people and processes that feed the world, exploring issues of diversity, the needs of small farmers, the importance of seed saving, the movement toward localization, and the role of women in producing the world's food.

*The Vandana Shiva Reader* Vandana Shiva 2015-01-27 "Her great virtue as an advocate is that she is not a reductionist. Her awareness of the complex connections among economy and nature and culture preserves her from oversimplification. So does her understanding of the importance of diversity."—Wendell Berry, from the foreword Motivated by agricultural devastation in her home country of India, Vandana Shiva became one of the world's most influential and highly acclaimed environmental and antiglobalization activists. This important volume illuminates Shiva's profound understanding of both the perils and potential of our interconnected world and calls on citizens of all nations to renew their commitment to love and care for soil, seeds, and people.

**Churning the Earth** Aseem Shrivastava 2012-05-24 The world stands so dazzled by India's meteoric economic rise that we hesitate to acknowledge its consequences to the people and the environment. In *Churning the Earth*, Aseem Shrivastava and Ashish Kothari engage in a timely enquiry of this impressive growth story. They present incontrovertible evidence on how the nature of this recent growth has been predatory and question its sustainability. Unfettered development has damaged the ecological basis that makes life possible for hundreds of millions resulting in conflicts over water, land and natural resources, and increasing the chasm between the rich and the poor, threatening the future of India as a civilization. Rich with data and stories, this eye-opening critique of India's development strategy argues for a radical ecological democracy based on the principles of environmental sustainability, social equity and livelihood security. Shrivastava and Kothari urge a fundamental shift towards such alternatives—already emerging from a range of grassroots movements—if we are to forestall the descent into socio-ecological chaos. *Churning the Earth* is unique in presenting not only what is going wrong in India, but also the ways out of the crises that globalised growth has precipitated.

*Growing Stories from India* A. Whitney Sanford 2012-01-27 The costs of industrial agriculture are astonishing in terms of damage to the environment, human health, animal suffering, and social equity, and the situation demands that we expand our ecological imagination to meet this crisis. In response to growing dissatisfaction with the existing food system, farmers and consumers are creating alternate models of production and consumption that are both sustainable and equitable. In *Growing Stories from India: Religion and the Fate of Agriculture*, author A. Whitney Sanford uses the story of the deity Balaram and the Yamuna River as a foundation for discussing the global food crisis and illustrating the Hindu origins of agrarian thought. By employing narrative as a means of assessing modern agriculture, Sanford encourages us to reconsider our relationship with the earth. Merely creating new stories is not enough -- she asserts that each story must lead to changed practices. *Growing Stories from India* demonstrates that conventional agribusiness is only one of many options and engages the work of modern agrarian luminaries to explore how alternative agricultural methods can be implemented.

*Manifestos on the Future of Food & Seed* Carlo Petrini 2007 A wide range of contributors offer suggestions on how to make food and agriculture more socially and ecologically sustainable, including

essays by Prince Charles and Carlo Petrini.

The Virtues of Ignorance Bill Vitek 2008-05-01 Human dependence on technology has increased exponentially over the past several centuries, and so too has the notion that we can fix environmental problems with scientific applications. *The Virtues of Ignorance: Complexity, Sustainability, and the Limits of Knowledge* proposes an alternative to this hubristic, shortsighted, and dangerous worldview. The contributors argue that uncritical faith in scientific knowledge has created many of the problems now threatening the planet and that our wholesale reliance on scientific progress is both untenable and myopic. Bill Vitek, Wes Jackson, and a diverse group of thinkers, including Wendell Berry, Anna Peterson, and Robert Root-Bernstein, offer profound arguments for the advantages of an ignorance-based worldview. Their essays explore this philosophy from numerous perspectives, including its origins, its essence, and how its implementation can preserve vital natural resources for posterity. All conclude that we must simply accept the proposition that our ignorance far exceeds our knowledge and always will. Rejecting the belief that science and technology are benignly at the service of society, the authors argue that recognizing ignorance might be the only path to reliable knowledge. They also uncover an interesting paradox: knowledge and insight accumulate fastest in the minds of those who hold an ignorance-based worldview, for by examining the alternatives to a technology-based culture, they expand their imaginations. Demonstrating that knowledge-based worldviews are more dangerous than useful, *The Virtues of Ignorance* looks closely at the relationship between the land and the future generations who will depend on it. The authors argue that we can never improve upon nature but that we can, by putting this new perspective to work in our professional and personal lives, live sustainably on Earth.

Hubris and Hybrids Mikael Hård 2013-09-13 Human societies have not always taken on new technology in appropriate ways. Innovations are double-edged swords that transform relationships among people, as well as between human societies and the natural world. Only through successful cultural appropriation can we manage to control the hubris that is fundamental to the innovative, enterprising human spirit; and only by becoming hybrids, combining the human and the technological, will we be able to make effective use of our scientific and technological achievements. This broad cultural history of technology and science provides a range of stories and reflections about the past, discussing areas such as film, industrial design,

and alternative environmental technologies, and including not only European and North American, but also Asian examples, to help resolve the contradictions of contemporary high-tech civilization.

Religion and Sustainable Agriculture Todd LeVasseur 2016-10-21 Distinct practices of eating are at the heart of many of the world's faith traditions -- from the Christian Eucharist to Muslim customs of fasting during Ramadan to the vegetarianism and asceticism practiced by some followers of Hinduism and Buddhism. What we eat, how we eat, and whom we eat with can express our core values and religious devotion more clearly than verbal piety. In this wide-ranging collection, eminent scholars, theologians, activists, and lay farmers illuminate how religious beliefs influence and are influenced by the values and practices of sustainable agriculture. Together, they analyze a multitude of agricultural practices for their contributions to healthy, ethical living and environmental justice. Throughout, the contributors address current critical issues, including global trade agreements, indigenous rights to land and seed, and the effects of postcolonialism on farming and industry. Covering indigenous, Buddhist, Hindu, Christian, Muslim, and Jewish perspectives, this groundbreaking volume makes a significant contribution to the study of ethics and agriculture.

Culture and Horticulture Wolf D. Stol 2013-02-19 Various studies have shown time and again that small organic farms and home gardens are capable of producing more food per acre with less fossil energy than large-scale commercial agricultural installations dependent on machines and toxic chemical fertilizers and pesticides. This classic book by Wolf D. Stol, a respected elder in the practice of permaculture, details how food is grown holistically and beautifully by traditional communities around the world, and shows how to apply their ancient wisdom to our own gardens. With interest in natural, sustainable, organic and local food at an all-time high, people are looking beyond their farmers markets and CSA cooperatives to hyperlocal ways of growing healthy, delicious produce in urban gardens and their own backyards. Culture and Horticulture details time-tested methods that are as effective today as they were hundreds of years ago. On the practical front, the book works as a manual for creating and maintaining a bountiful harvest. It explains how to build the soil to maintain fertility; how to produce compost; how to plant, sow, and tend the various fruit and vegetable plants; how to rotate crops and practice companion planting; how to set up a favorable microclimate; how to deal with so-called weeds and pests; how to harvest at the

right time; and finally how to store vegetables and herbs. Special emphasis is given to the art and science of composting, the compost being the "heart" of any self-sufficient garden and a model for the cycle of life, death, and rebirth. At the same time the reader is introduced to the wider aspects of horticulture, to its historical, philosophical, and cosmological contexts and social relevance. Gardening is a cultural activity, shaped by peoples' thoughts, wishes, and needs as well as by their cultural traditions. The author, an anthropologist by profession who has investigated the gardening practices of indigenous people throughout the world and worked for many years on biodynamic farms and in his own food garden, will introduce the reader to Rudolf Steiner's vision of the garden as an organic unit, embedded in the context of terrestrial and cosmic forces. Storl explains the importance of cosmic rhythms (solar, lunar, and planetary), the role of biodynamic herbal preparations as "medicines" for the garden organism, and the so-called "etheric" and "astral" forces. The book presents a vision of the garden as seen through the eyes of "Goethean science," a magical place where alchemical transformations of material substances take place.

**Biopiracy** Vandana Shiva 2016-05-24 Genetic engineering and the cloning of organisms are "the ultimate expression of the commercialization of science and the commodification of nature.... Life itself is being colonized," according to renowned environmentalist Vandana Shiva. The resistance to this biopiracy, she argues, is the struggle to conserve both cultural and biological diversity. As the land, forests, oceans, and atmosphere have already been colonized, eroded, and polluted, corporations are now looking for new colonies to exploit and invade for further accumulation—in Shiva's view, the interior spaces of the bodies of women, plants, and animals. Featuring a new introduction by the author, this edition of *Biopiracy* is a learned, clear, and passionately stated objection to the ways in which Western businesses are being allowed to expropriate natural processes and traditional forms of knowledge.

[The Violence of the Green Revolution](#) Vandana Shiva 2016-01-05 The Green Revolution has been heralded as a political and technological achievement -- unprecedented in human history. Yet in the decades that have followed it, this supposedly nonviolent revolution has left lands ravaged by violence and ecological scarcity. A dedicated empiricist, Vandana Shiva takes a magnifying glass to the effects of the Green Revolution in India, examining the devastating effects of monoculture and commercial agriculture and revealing the nuanced relationship between ecological destruction and poverty. In this

classic work, the influential activist and scholar also looks to the future as she examines new developments in gene technology.

**Feminism and the Mastery of Nature** Val Plumwood 2002-09-11 Two of the most important political movements of the late twentieth century are those of environmentalism and feminism. In this book, Val Plumwood argues that feminist theory has an important opportunity to make a major contribution to the debates in political ecology and environmental philosophy. *Feminism and the Mastery of Nature* explains the relation between ecofeminism, or ecological feminism, and other feminist theories including radical green theories such as deep ecology. Val Plumwood provides a philosophically informed account of the relation of women and nature, and shows how relating male domination to the domination of nature is important and yet remains a dilemma for women.

**Staying Alive** Vandana Shiva 2016-03-01 Inspired by women's struggles for the protection of nature as a condition for human survival, award-winning environmentalist Vandana Shiva shows how ecological destruction and the marginalization of women are not inevitable, economically or scientifically. She argues that "maldevelopment"—the violation of the integrity of organic, interconnected, and interdependent systems that sets in motion a process of exploitation, inequality, and injustice—is dragging the world down a path of self-destruction, threatening survival itself. Shiva articulates how rural Indian women experience and perceive ecological destruction and its causes, and how they have conceived and initiated processes to arrest the destruction of nature and begin its regeneration. Focusing on science and development as patriarchal projects, *Staying Alive* is a powerfully relevant book that positions women not solely as survivors of the crisis, but as the source of crucial insights and visions to guide our struggle.

*The Vandana Shiva Reader* Vandana Shiva 2014-12-11 "Her great virtue as an advocate is that she is not a reductionist. Her awareness of the complex connections among economy and nature and culture preserves her from oversimplification. So does her understanding of the importance of diversity." -- Wendell Berry, from the foreword Motivated by agricultural devastation in her home country of India, Vandana Shiva became one of the world's most influential and highly acclaimed environmental and antiglobalization activists. Her groundbreaking research has exposed the destructive effects of

monocultures and commercial agriculture and revealed the links between ecology, gender, and poverty. In *The Vandana Shiva Reader*, Shiva assembles her most influential writings, combining trenchant critiques of the corporate monopolization of agriculture with a powerful defense of biodiversity and food democracy. Containing up-to-date data and a foreword by Wendell Berry, this essential collection demonstrates the full range of Shiva's research and activism, from her condemnation of commercial seed technology, genetically modified organisms (GMOs), and the international agriculture industry's dependence on fossil fuels, to her tireless documentation of the extensive human costs of ecological deterioration. This important volume illuminates Shiva's profound understanding of both the perils and potential of our interconnected world and calls on citizens of all nations to renew their commitment to love and care for soil, seeds, and people.

**Reclaiming the Commons** Vandana Shiva 2020-07-14 Authored by world renowned activist and environmental leader Vandana Shiva, *Reclaiming the Commons* presents the history of the struggle to defend biodiversity and traditional practices against corporate biopiracy and details efforts to realize legal rights for Mother Earth and achieve the vision of the universal commons and Earth as Family.

**Stolen Harvest** Vandana Shiva 2016-01-05 For the farmer, the seed is not merely the source of future plants and food; it is a vehicle through which culture and history can be preserved and spread to future generations. For centuries, farmers have evolved crops and produced an incredible diversity of plants that provide life-sustaining nutrition. In India alone, the ingenuity of farmers has produced over 200,000 varieties of rice, many of which now line store shelves around the world. This productive tradition, however, is under attack as globalized, corporate regimes increasingly exploit intellectual property laws to annex these sustaining seeds and remove them from the public sphere. In *Stolen Harvest: The Hijacking of the Global Food Supply*, Shiva explores the devastating effects of commercial agriculture and genetic engineering on the food we eat, the farmers who grow it, and the soil that sustains it. This prescient critique and call to action covers some of the most pressing topics of this ongoing dialogue, from the destruction of local food cultures and the privatization of plant life, to unsustainable industrial fish farming and safety concerns about corporately engineered foods. The preeminent agricultural activist and scientist of a generation, Shiva implores the farmers and consumers of the world to make a united stand against

the genetically modified crops and untenable farming practices that endanger the seeds and plants that give us life.

**Earth Democracy** Vandana Shiva 2016-05-15 'One of the world's most prominent radical scientists.' The Guardian This book remains one of Vandana Shiva's key works, in which she addresses some of the most pressing issues of our age – the privatization of our natural resources, the looming environmental crisis, and the rising tide of fundamentalism and violence against women. In spite of all this, Shiva still sees cause for hope. Across the globe, a new wave of protest movements are championing alternatives based on inclusion, nonviolence, the free sharing of resources and the reclamation of the commons. Shiva argues that these ideals can serve as the basis for “earth democracy”, and for a more just and sustainable future. This edition features a new preface by the author, in which she outlines recent developments in ecology and environmentalism, and offers new prescriptions for the environmental movement.

**Soil Not Oil** Vandana Shiva 2015-10-06 This modern-day Silent Spring addresses climate change head on, arguing that the solution to this global crisis lies in sustainable, biologically diverse farms In Soil Not Oil, Vandana Shiva explains that a world beyond dependence on fossil fuels and globalization is both possible and necessary. Condemning industrial agriculture as a recipe for ecological and economic disaster, Shiva champions the small, independent farm: their greater productivity, their greater potential for social justice as they put more resources into the hands of the poor, and the biodiversity that is inherent to the traditional farming practiced in small-scale agriculture. What we need most in a time of changing climates and millions who are hungry, she argues, is sustainable, biologically diverse farms that are more resistant to disease, drought, and flood. “The solution to climate change,” she observes, “and the solution to poverty are the same.” Soil Not Oil proposes a solution based on self-organization, sustainability, and community rather than corporate power and profits.
