space for our bodies to reconnect with our innate healing response. This naturalistic process resolves symptoms by gently discharging the high levels of nervous system arousal associated with trauma, and helping our bodies return to a more manageable level of functioning. As we begin to reset our nervous system, integration organically occurs.

For the youths that have big bodies but little life experience, there's a "spike in mortality . . . they are easy prey," Natterson-Horowitz said. One reason is that they engage in behaviors that are risky but beneficial, Bowers said in an interview. An example is a practice called "predator inspection," or approaching predators rather than fleeing.
