Uplift Cinema Allyson Nadia Field 2015-05-18 In Uplift Cinema, Allyson Nadia Field recovers the significant yet forgotten legacy of African American filmmaking in the 1910s. Like the racial uplift project, this cinema emphasized economic self-sufficiency, education, and respectability as the keys to African American progress. Field discusses films made at the Tuskegee and Hampton Institutes to promote education, as well as the controversial The New Era, which was an antiracist response to D. W. Griffith's The Birth of a Nation. She also shows how Black filmmakers in New York and Chicago engaged with uplift through the promotion of Black modernity. Uplift cinema developed not just as a response to onscreen racism, but constituted an original engagement with the new medium that has had a deep and lasting significance for African American cinema. Although none of these films survived, Field's examination of archival film ephemera presents a method for studying lost films that opens up new frontiers for exploring early film culture.

How to Design Programs, second edition Matthias Felleisen 2018-05-04 A completely revised edition, offering new design recipes for interactive programs and support for images as plain values, testing, event-driven programming, and even distributed programming. This introduction to programming places computer science at the core of a liberal arts education. Unlike other introductory books, it focuses on the program design process, presenting program design guidelines that show the reader how to analyze a problem statement, how to formulate concise goals, how to make up examples, how to

develop an outline of the solution, how to finish the program, and how to test it. Because learning to design programs is about the study of principles and the acquisition of transferable skills, the text does not use an off-the-shelf industrial language but presents a tailor-made teaching language. For the same reason, it offers DrRacket, a programming environment for novices that supports playful, feedback-oriented learning. The environment grows with readers as they master the material in the book until it supports a full-fledged language for the whole spectrum of programming tasks. This second edition has been completely revised. While the book continues to teach a systematic approach to program design, the second edition introduces different design recipes for interactive programs with graphical interfaces and batch programs. It also enriches its design recipes for functions with numerous new hints. Finally, the teaching languages and their IDE now come with support for images as plain values, testing, event-driven programming, and even distributed programming.

Digital Storytelling, Applied Theatre, & Youth Megan Alrutz 2014-09-19 Digital Storytelling, Applied Theatre, & Youth argues that theatre artists must re-imagine how and why they facilitate performance practices with young people. Rapid globalization and advances in media and technology continue to change the

ways that people engage with and understand the world around them. Drawing on pedagogical, aesthetic, and theoretical threads of applied theatre and media practices, this book presents practitioners, scholars, and educators with innovative approaches to devising and performing digital stories. This book offers the first comprehensive examination of digital storytelling as an applied theatre practice. Alrutz explores how participatory and mediated performance practices can engage the wisdom and experience of youth; build knowledge about self, others and society; and invite dialogue and deliberation with audiences. In doing so, she theorizes digital storytelling as a site of possibility for critical and relational practices, feminist performance pedagogies, and alliance building with young people.
