Children, Meaning-Making and the Arts Susan Wright 2015-05-20 This Australian text is about children's voices - their minds, feelings, souls. It's about how children's voices are liberated through the arts, and how children make and communicate meaning through still and moving images, sounds, textures, gestures and the use of many other signs. It is also about how teachers, parents, peers and the

community influence children's early development, and how quality arts education in early childhood is an essential component of lifelong learning. The authors are teachers and researchers who are respected for their contributions to early childhood arts education. All of them have addressed their topics via practical examples, which are embedded in current philosophies and theories, often stemming from original research and firsthand interactions with children.

Reorganizing Popular Politics Ruth Berins Collier 2015-10-29 A historic shift has occurred in the organizational structures through which the lower classes in Latin America express voice and find political representation. With the political and economic reforms of the 1980s and 1990s, networks of community-based associations and nongovernmental organizations replaced party-affiliated labor unions as the predominant organizations to which the lower classes turned. This volume examines the new "interest regime" in Argentina, Chile, Peru, and Venezuela through two extensive surveys—one of individuals and one of associations—undertaken in those nations' capital cities. Contrary to common perceptions, the new interest regime is neither a vibrant, autonomous civil society nor a set of weak, atomized organizations. Participation in associations is generally high, compared to "direct action" as a strategy for pursuing collective interests, and associations more frequently coordinate and engage the state than has sometimes been assumed. However, various forms of interaction with the state pose a classic trade-off between representation and state control, and the new interest regime is marked by representational distortion, in that the lower classes are less likely to use the new structures than the middle classes. Within these general patterns, distinct national models are emerging. This volume represents the most ambitious and systematic effort to date to examine individual participation and associational life in Latin America and to carry out a cross-national analysis of new forms of political representation.

Finishing Strong Steve Farrar 2011-02-02 Bestselling author Steve Farrar has good news for the average man: it doesn't matter if you've had a great start in the Christian life, or a rough one. It doesn't matter if you've stumbled time and again, or even fallen flat on your face. What matters most in this all-important race of life is how you finish. According to Farrar, the man who hangs in there for the long haul with his wife, his kids, and his Lord is an exception these days. *Finishing Strong*, now in trade paperback, offers lively use of Scripture, contemporary illustrations, and study questions to equip every reader to be that exception. For the man who wants to climb the character ladder more than the corporate one, this is an essential tool.

With carefully crafted features and vivid examples, Goolsbee, Levitt, and Syverson's text helps answer two

critical questions students ask, "Do people and firms really act as theory suggests?" and "How can someone use microeconomics in a practical way?" The authors teach in economics departments and business schools and are active empirical microeconomics researchers. Their grounding in different areas of empirical research allows them to present the evidence developed in the last 20 years that has tested and refined fundamental theories. Their teaching and professional experiences are reflected in an outstanding presentation of theories and applications.

Numerical Techniques in Electromagnetics, Second Edition Matthew N.O. Sadiku 2000-07-12 As the availability of powerful computer resources has grown over the last three decades, the art of computation of electromagnetic (EM) problems has also grown - exponentially. Despite this dramatic growth, however, the EM community lacked a comprehensive text on the computational techniques used to solve EM problems. The first edition of *Numerical Techniques in Electromagnetics* filled that gap and became the reference of choice for thousands of engineers, researchers, and students. The Second Edition of this bestselling text reflects the continuing increase in awareness and use of numerical techniques and incorporates advances and refinements made in recent years. Most notable among these are the improvements made to the standard algorithm for the finite difference time domain (FDTD) method and treatment of absorbing boundary conditions in FDTD, finite element, and transmission-line-matrix methods. The author also added a chapter on the method of lines. *Numerical Techniques in Electromagnetics* continues to teach readers how to pose, numerically analyze, and solve EM problems, give them the ability to expand their problem-solving skills using a variety of methods, and prepare them for research in electromagnetism. Now the Second Edition goes even further toward providing a comprehensive resource that addresses all of the most useful computation methods for EM problems.
