The Oxford Handbook of Social Networks Ryan Light 2020-12-04 "Social networks fundamentally shape our lives. Networks channel the ways that information, emotions, and diseases flow through populations. Networks reflect differences in power and status in settings ranging from small peer groups to international relations across the globe. Network tools even provide insights into the ways that concepts, ideas and other socially generated contents shape culture and meaning. As such, the rich and diverse field of social network analysis has emerged as a central tool across the social sciences. This Handbook provides an overview of the theory, methods, and substantive contributions of this field. The thirty-three chapters move through the basics of social network analysis aimed at those seeking an introduction to advanced and novel approaches to modeling social networks statistically. The Handbook includes chapters on data collection and visualization, theoretical innovations, links between networks and computational social science, and how social network analysis has contributed substantively across numerous fields. As networks are everywhere in social life, the field is inherently interdisciplinary and this Handbook includes contributions from leading scholars in sociology, archaeology, economics, statistics, and information science among others"--

Learning to Teach History in the Secondary School Terry Haydn 2012-11-12 In some hands, history can be an inspirational and rewarding subject, yet in others it can seem dry and of little relevance. The aim of this textbook is to enable student teachers to learn to teach history in a way that pupils will find interesting, enjoyable and purposeful. It incorporates a wide range of ideas about the teaching of history with practical suggestions for classroom practice. This is the third edition of a textbook that has established itself as the leading text for student teachers of history. It has been thoroughly updated, with a revised chapter on the use of ICT in history teaching and major new sections in the areas of inclusion, resources, assessment and professional development. It provides an array of references and materials that give a sound theoretical foundation for the teaching of history, including weblinks to further resources. A range of tasks enable students to put their learning into practice in the classroom. The book also provides reference and access to a wide range of recent and relevant research in the field of history education, which will be of use to student teachers pursuing courses that have a Masters Level component. In all, it is an invaluable resource for student and beginning history teachers.

Enterprise Content Management in Information Systems Research Jan vom Brocke 2013-11-04 This book collects ECM research from the academic discipline of Information Systems and related fields to support academics and practitioners who are interested in understanding the design, use and impact of ECM systems. It also provides a valuable resource for students and lecturers in the field. "Enterprise content management in Information Systems research - Foundations, methods and cases" consolidates our current knowledge on how today's organizations can manage their digital information assets. The business challenges related to organizational information management include reducing search times, maintaining information quality, and complying with reporting obligations and standards. Many of these challenges are well-known in information management, but because of the vast quantities of information being generated today, they are more difficult to deal with than ever. Many companies use the term "enterprise content management" (ECM) to refer to the management of all forms of information, especially unstructured information. While ECM systems promise to increase and maintain information quality, to streamline content-related business processes, and to track the lifecycle of information, their implementation poses several questions and challenges: Which content objects should be put under the control of the ECM system? Which processes are affected by the implementation? How should outdated technology be replaced? Research is challenged to support practitioners in answering these questions.

Nuclear power in Germany - History and future prospects Tobias Henze 2013-02-01 Master's Thesis from the year 2012 in the subject Politics - Miscellaneous, grade: sehr gut, , language: English, abstract: The aim of this master thesis is to explain Germany's decision to phase out its nuclear power plants by 2022 and move from fossil fuels to renewable energy sources. As the decision to phase out is rather unique among the industrialized and most advanced nations, the paper is set out to analyze the reasons for the peculiarity and assumes that the long-lasting societal debate on the topic of nuclear technology has gradually influenced the decision-making process. The hypothesis is based on the observation that the decision to phase out had been taken shortly after the nuclear accident in the Japanese atomic power plant Fukushima which caused large-scale criticism against the previous energy policies of the government. The analysis uses a historical approach and applies an analytical framework which incorporates the most important stakeholders of the decision-making process. The analytical framework centers on Kingdon's multiple streams model and further takes into account theories and models explaining the working and behavior of politicians and parties, the media, the public and pressure groups which all have an impact on the policy-making process. Thereby, the paper is able to depict the development of the societal debate and to assess its impact on nuclear policy decisions of the past and present. Moreover, the paper elaborates on the question how Germany's decision to transform its energy production is put into practice. Here, a review of the policies establishing the energy transition is used in

order to explain the most important provisions and problems that already have been encountered. Additionally, proposed policy changes are presented that might be implemented in the future in order to solve the problems.

Time in Roman Religion Gary Forsythe 2012-05-31 Religion is a major subfield of ancient history and classical studies, and Roman religion in particular is usually studied today by experts in two rather distinct halves: the religion of the Roman Republic, covering the fifth through first centuries B.C.; and the religious diversity of the Roman Empire, spanning the first four centuries of our era. In *Time in Roman Religion*, author Gary Forsythe examines both the religious history of the Republic and the religious history of the Empire. These six studies are unified by the important role played by various concepts of time in Roman religious thought and practice. Previous modern studies of early Roman religion in Republican times have discussed how the placement of religious ceremonies in the calendar was determined by their relevance to agricultural or military patterns of early Roman life, but modern scholars have failed to recognize that many aspects of Roman religious thought and behavior in later times were also preconditioned or even substantially influenced by concepts of time basic to earlier Roman religious history. This book is not a comprehensive survey of all major aspects of Roman religious history spanning one thousand years. Rather, it is a collection of six studies that are bound together by a single analytical theme: namely, time. Yet, in the process of delving into these six different topics the study surveys a large portion of Roman religious history in a representative fashion, from earliest times to the end of the ancient world and the triumph of Christianity.

Varieties of Capitalism in History, Transition and Emergence Martha Prevezer 2017-03-27 Economics tends to teach that developed countries have good institutions while developing countries do not, and that this is the factor that constrains the latter's growth. However, the picture is far messier than this explanation suggests. Building on the varieties of capitalism framework, this book brings together the tools of institutional economics with historical analyses of institutional evolution of different kinds of property rights and legal systems, protected by different kinds of state, giving rise to distinct corporate governance structures. It constructs institutional development histories across leading liberal capitalisms in Britain and the United States, compared with continental capitalisms in France and Germany, and contemporary transitional capitalisms in China and Tanzania. This volume is innovative in combining both historical and economic insights, and in combining developed country with developing country institutional emergence, dispelling the prevailing sense of complacency about the inevitability of the path of institutional development for the developed areas of the world and the paths that developing countries are likely to follow. This volume will be of great importance to those who study international economics, development economics and international business.

Transdisciplinary Research and Practice for Sustainability Outcomes Dena Fam 2016-11-10 'Transdisciplinarity' is a form of research and practice that synthesises knowledge from a range of academic disciplines and from the community. There is now global interest and a significant body of work on transdisciplinarity and its potential to address the apparently intractable problems of society. This creates the opportunity for a specific focus on its practical application to sustainability issues. *Transdisciplinary Research and Practice for Sustainability Outcomes* examines the role of transdisciplinarity in the transformations needed for a sustainable world. After an historical overview of transdisciplinarity, Part I focuses on tools and frameworks to achieve sustainability outcomes in practice and Part II consolidates work by a number of scholars on supporting transdisciplinary researchers and practitioners. Part III is a series of case studies including several international examples that demonstrate the challenges and rewards of transdisciplinary work. The concluding chapter proposes a future research pathway for understanding the human factors that underpin successful transdisciplinary research. As Emeritus Professor Valerie Brown AO notes in her Preface, this book moves transdisciplinary inquiry into the academic and social mainstream. It will be of great interest to researchers and practitioners in the fields of sustainability, qualitative research methods, environmental impact assessment and development studies.

Knowledge at the Crossroads? Lyn Yates 2016-10-26 There is much discussion about what needs to change in education institutions in the 21st century, but less attention given to how core disciplinary studies should be considered within that context. This book is based on a major 4-year research study of history and physics in the changing environment of schools and universities in Australia. Are these forms of knowledge still valuable for students? Are they complementary to, or at odds with the concerns about '21st century skills', interdisciplinary and collaborative research teams, employability and 'learner-centred' education? How do those who work in these fields see changes in their disciplines and in their work environment? And what are the similarities and differences between the experiences of teachers and academics in physics and those in history? The book draws on interviews with 115 school teachers and university academics to provide new perspectives on two important issues. Firstly, how, for the purposes of today's schools and universities, can we adequately understand knowledge and knowledge building over time? Secondly, what has been productive and what has been counter-productive in recent efforts to steer and manage the changes in Australia?

EULOCS Gert Vermeulen 2009 The EU Level Offence Classification System (EULOCS) brings together the current EU substantive criminal law acquis, building essentially on offence definitions referred to in legal instruments included in the EU Justice and Home Affairs (EU JHA) acquis. In doing so, EULOCS clarifies the scope between EU competence and national sovereignty with regard to defining criminal behavior. With this book, EULOCS is bench-marked as a reference index for serving various needs in the broader EU criminal policy area, having the potential to significantly enhance the internal coherence thereof. The proposed reference index, with offence definitions inherent to it, fundamentally addresses the problem created by the organic elaboration and adoption of legal instruments at the EU level, making reference to certain offence categories the scope or definition whereof is most often either not clarified or indicated, or left to the discretion of the individual Member States. Before elaborating on the creation of EULOCS - the methodology used, its main characteristics, and the potential for further development in the coming years - this book contains a brief overview of the incoherence in the EU JHA field and a reference to the EU study to implement the Action Plan to measure crime and criminal justice, conducted for the European Commission in the course of 2008-2009, in the context of which EULOCS has been created. Most importantly, the full EULOCS, with all its complementary variables and context fields, has been inserted. This book is essential reading for EU policy makers, judicial and law enforcement authorities throughout the Union, as well as those in a broader international context. It will be particularly appealing also to the research community and anyone involved in or taking an interest in justice and home affairs or criminal policy initiatives in the EU.

Microbial Carbonates in Space and Time: D.W.J. Bosence 2015-08-21 Microbial carbonates (microbialites) are remarkable sedimentary deposits because they have the longest geological range of any type of biogenic limestones, they form in the greatest range of different sedimentary environments, they oxygenated the Earth's atmosphere, and they produce and store large volumes of hydrocarbons. This Special Publication provides significant contributions at a pivotal time in our understanding of microbial carbonates, when their economic importance has become established and the results of many

research programmes are coming to fruition. It is the first book to focus on the economic aspects of microbialites and in particular the giant pre-salt discoveries offshore Brazil. In addition it contains papers on the processes involved in formation of both modern and ancient microbialites and the diversity of style in microbial carbonate buildups, structures and fabrics in both marine and non-marine settings and throughout the geological record.

Water, Agriculture and the Environment in Spain: can we square the circle? Lucia De Stefano 2012-10-17 "The world water problems are a due to bad governance, not to physical water scarcity." This book is inspired by this statement and explores whether it holds in a specific country, Spain, where climatic conditions – Spain is one of the most arid countries of the European Union - would fully justify saying that water problems are due to physical water scarcity. The metrification of water uses and their monetary value is a first important step in understanding how reallocation of water among users could help mitigating many of current water problems in Spain. However, water reallocation among users or from users to nature is far from simple. Initiatives portrayed as the solution to the water governance 'jigsaw' – e.g. water trade, improved water use efficiency, users collective action, public participation – are not free of difficulties and shortcomings. The book explores the growing need for maintaining Spain's natural capital and the human component of water governance – people's needs, wishes, (vested) interests, aspirations – that often determine the result of decisions and, sometimes, lead water management to a deadlock. This book takes a step forward in showing a more complex - and also closer to reality - picture of water governance in Spain.

Historical Thinking for History Teachers Tim Allender 2020-07-16 Effective Australian history education has never been more important for the development of critically aware and thoughtful young people. History fosters important skills in reasoning, historical consciousness and empathy; and an appreciation of history is crucial to the development of students' understanding of the very nature of our society. This edited collection comprises contributions from leading historians, educators and practising teachers, and surveys Australian history teaching today, from the development of the national curriculum to fostering historical thinking and promoting effective engagement in the history classroom. The book begins with an analysis of the principles underlying the drafting of the national curriculum and features insights from the writers of the curriculum themselves. It focuses on the curriculum from primary- and secondary-school teaching perspectives. Part 2 examines the teaching of historical expertise including historical thinking and value formation, as well as productive assessment and the important role social history can play in the classroom. Part 3 concentrates on specific approaches to history teaching including teacher talk; the use of historical fiction and film; digital technology and the internet; as well as museums as a teaching medium. Part 4 analyses key aspects of Australian history teaching including Indigenous perspectives, teaching citizenship and assisting the pre-service teacher in their transition to becoming a professional. Rich with insights into historical skills, historical concepts and critical thinking, as well as practical guidance on translating principles into engaging classroom approaches, this is an essential reference for both pre-service and in-service history teachers and educators.

Rethinking Oral History and Tradition Nepia Mahuika 2019-10-09 Indigenous peoples have our own ways of defining oral history. For many, oral sources are shaped and disseminated in multiple forms that are more culturally textured than just standard interview recordings. For others, indigenous oral histories are not merely fanciful or puerile myths or traditions, but are viable and valid historical accounts that are crucial to native identities and the relationships between individual and collective narratives. This book challenges popular definitions of oral history that have displaced and confined indigenous oral accounts as merely oral tradition. It stands alongside other marginalized community voices that highlight the importance of feminist, Black, and gay oral history perspectives, and is the first text dedicated to a specific indigenous articulation of the field. Drawing on a Maori indigenous case study set in Aotearoa New Zealand, this book advocates a rethinking of the discipline, encouraging a broader conception of the way we do oral history, how we might define its form, and how its politics might move beyond a subsuming democratization to include nuanced decolonial possibilities.
