L2 Selves and Motivations in Asian Contexts Matthew T. Apple 2016-11-23 This book fills an existing gap in language learning motivation research by examining the applications of current motivational theories and models from WEIRD (Western, educated, industrialized, rich, developed) contexts to

educational systems in Asian contexts. All chapters are focused on second language (L2) motivation as it applies to the EFL situation in Asian countries where English is a mandatory subject in school. Themes in the volume cover the use of possible L2 selves as a theoretical model of motivation, the role of teacher motivation and demotivation in non-European educational systems, study abroad, motivation among adolescents, cross-cultural differences in learner motivation among Asian cultures and the influence of native speakerism on language motivation and cultural identity. This book will appeal to ESL/EFL educators, postgraduate students, researchers and teacher-trainers both inside and outside Asian countries, who are interested in research on L2 motivation in general and within Asian contexts in particular.

Challenges in Language Testing Around the World Betty Lanteigne 2021-02-17 This book combines insights from language assessment literacy and critical language testing through critical analyses and research about challenges in language assessment around the world. It investigates problematic practices in language testing which are relevant to language test users such as language program directors, testing centers, and language teachers, as well as teachers-in-training in Graduate Diploma and Master of Arts in Applied Linguistics programs. These issues involve aspects of language testing such as test development, test administration, scoring, and interpretation/use of test results. Chapters in this volume discuss insights about language testing policy, testing world languages, developing program-level language tests and tests of specific language skills, and language assessment literacy. In addition, this book identifies two needs in language testing for further examination: the need for collaboration between language test developers, language test users, and language users, and the need to base language tests on real-world language use.

Assessing L2 Listening Gary J. Ockey 2018-08-08 This book is relevant for language testers, listening researchers, and oral proficiency teachers, in that it explores four broad themes related to the assessment of L2 listening ability: the use of authentic, real-world spoken texts; the effects of different speech varieties of listening inputs; the use of audio-visual texts; and assessing listening as part of an interactive speaking/listening construct. Each theme is introduced with a review of the relevant literature, and then is examined through either two or three empirical studies. The notion of authenticity underlies each of these four themes. By creating more authentic test tasks that are similar to real world language tasks, test developers can create listening assessments that not only more effectively assess test takers' communicative competence, but can also have a positive washback effect on educational systems.

The Fruits of Opportunism Le Lin 2022-10-07 An in-depth examination of the regulatory, entrepreneurial, and organizational factors contributing to the expansion and transformation of China's supplemental education industry. Like many parents in the United States, parents in China, increasingly concerned with their children's academic performance, are turning to for-profit tutoring businesses to help their children get ahead in school. China's supplemental education industry is now the world's largest and most vibrant for-profit education market, and we can see its influence on the US higher education system: more than 70% of Chinese students studying in American universities have taken test preparation classes for overseas standardized tests. *The Fruits of Opportunism* offers a much-needed thorough investigation into this industry. This book examines how opportunistic organizations thrived in an ambiguous policy environment and how they catalyzed organizational and institutional changes in this industry. A former insider in China's Education Industry, sociologist Le Lin shows how and why this industry evolved to become a for-profit one dominated by private, formal, nationally operating, and globally financed corporations, despite restrictions the Chinese state placed on the industry. Looking closely at the opportunistic organizations that were founded by marginal entrepreneurs and quickly came to dominate the market, Lin finds that as their non-compliant practices spread across the industry, these opportunistic organizations pushed privatization and marketization from below. The case of China's Education Industry laid out in *The Fruits of Opportunism* illustrates that while opportunism leaves destruction in its wake, it can also drive the formation and evolution of a market.

Parallel Societies of International Students in Australia Catherine Gomes
2021-09-30 *Parallel Societies of International Students in Australia* explores the social and cultural spaces that international students occupy in destination countries. It specifically examines the connections they make and the significance of this parallel society in helping them become resilient, empowered and self-sufficient. It further explores the way in which international students become disconnected from the family and friends they left behind at home, as well as from local communities. Drawing on a decade worth of research into the social, cultural, real and digital spaces occupied by international students in Australia, the book also reflects on the biggest challenge humanity has faced in a hundred years; the COVID-19 global pandemic. It considers the impact that the decisions made by the Australian government and international education stakeholders in response to this evolving crisis have had on international students. □ This book will be of interest to academics and stakeholders involved in international education and working with international students.

Building a Validity Argument for the Test of English as a Foreign Language™
Carol A. Chapelle 2011-04-06 The Test of English as a Foreign Language™ (TOEFL®) is used by more universities worldwide than any other test to assess English language proficiency for academic admission and placement decisions, and to guide English language instruction. This landmark volume provides a detailed description and analysis of Educational Testing Service's research and development efforts to develop a major revision of the TOEFL® test. The result is a book that serves as a case study of test design drawing upon theory in the

complex domain of English language proficiency while attempting to meet standards of educational measurement. Building a Validity Argument for the Test of English as a Foreign Language™ is distinctive in its attempt to develop a coherent story of the rationale for a test or its revision, explain the research and development process, and provide the results of the validation process. Through its treatment of one test, it expands on and tests principles and approaches to educational measurement, providing an in-depth, integrated perspective on the overall process of test revision. Moreover, because the conceptual foundation and history are presented alongside the empirical studies and validity argument, these sometimes disparate areas are presented in a way that demonstrates their connections – an approach which represents a departure from, or extension of, conventional materials on test revision. This volume is particularly relevant for professionals and graduate students in educational measurement, applied linguistics, and second language acquisition as well as anyone interested in assessment issues.

Computerized Multistage Testing Duanli Yan 2016-04-19 Devising tests that evaluate a nation's educational standing and implement efficacious educational reforms requires a careful balance among the contributions of technology, psychometrics, test design, and the learning sciences. Unlike other forms of adaptive testing, multistage testing (MST) is highly suitable for testing educational achievement because it can be adapted to educational surveys and student testing. *Computerized Multistage Testing: Theory and Applications* covers the methodologies, underlying technology, and implementation aspects of this type of test design. The book discusses current scientific perspectives and practical considerations for each step involved in setting up an MST program. It covers the history of MST, test design and implementation for various purposes, item pool development and maintenance, IRT-based and classical test theory-based methodologies for test assembly, routing and scoring, equating, test security, and existing software. It also explores current research, existing operational programs, and innovative future assessments using MST. Intended for psychologists, social scientists, and educational measurement scientists, this volume provides the first unified source of information on the design, psychometrics, implementation, and operational use of MST. It shows how to apply theoretical statistical tools to testing in novel and useful ways. It also explains how to explicitly tie the assumptions made by each model to observable (or at least inferable) data conditions. Winner of the 2016 AERA Award for Significant Contribution to Educational Measurement and Research Methodology The 2016 American Education Research Association (AERA) Div. D award committee for Significant Contributions to Educational Measurement and Research Methodology has recognized unanimously this collaborative work advancing the theory and applications of computerized MST. This annual award recognizes published research judged to represent a significant conceptual advancement in the theory and practice of educational measurement and/or educational research methodology. The 2016 award was made under the heading: Measurement, Psychometrics, and Assessment. This collective work, published in 2014 as an edited volume titled *Computerized Multistage Testing: Theory and Applications*, was cited by the committee both for the originality of the conceptual foundations presented in support of multistage testing and for arguing persuasively for its potential impact on the practice of educational measurement.
