The Better Mom Ruth Schwenk 2018-04-24 Mothering is messy. Our joy and hope in raising children doesn't change the reality that being a mom can be frustrating, stressful, and tiring. But just as God is using us to shape our children, God is using our children and motherhood to shape us. In *The Better Mom*, author Ruth Schwenk, herself a mother of four children, encourages us with the good news that there is more to being a mom than the extremes of striving for perfection or simply embracing the mess. We don't need to settle for surviving our kids' childhood. We can grow through it. With refreshing and heartfelt honesty Ruth emboldens moms to: Find freedom and walk confidently in purpose Create a God-honoring home environment Overcome unhealthy and destructive emotions such as anger, anxiety, and more Avoid glorifying the mess of mom-ing or idolizing perfection Cultivate life-giving friendships At the heart of *The Better Mom* is the message that Jesus calls us to live not a weary life, but a worthy life. We don't have to settle for either being apathetic or struggling to be perfect. Both visions of motherhood go too far. Ruth offers a better option. She says, "It's okay to come as we are, but what we're called to do and be is far too important to stay there! The way to becoming a better mom starts not with what we are doing, but with who God is inviting us to become."

Organic Housekeeping Ellen Sandbeck 2007-11-01 Longing for a kinder, gentler world? As the old saying goes, everything begins at home, and odds are, if you live in the all-American household, the air inside is more toxic than the air outside, even if you live in the most polluted of cities. You regularly handle the filthiest object in your home -- the kitchen sponge -- and put the same chemicals on your face that are used in brake fluid and antifreeze. The cleaning agents and personal care products commonly marketed to and used in American homes contain not only some very dangerous, toxic chemicals, but they also create an "overly clean," chemically bombed-out house that compromises immune systems. And with more than fifty million Americans suffering from allergies and other autoimmune diseases -- not to mention the developing and fragile immune systems of children and seniors -- large numbers of people are actually being made sicker and sicker by their homes. Learn to live a clean, healthy, more economical way with Ellen Sandbeck, the nontoxic avenger. In this must-have book for the twenty-first-century home, this passionate, witty advocate of all things organic will teach you how to maintain every part of the home -- from living room to septic tank, kitchen floor to bathroom sink -- using safe, simple cleansers and quick preventative measures as well as the most effective organic products on the market to get the job done. Learn time-saving, preventative housekeeping, such as taking thirty seconds to clean the shower while you shower. Take care of bathroom stains with baking soda and vinegar rather than commercial, toxic bathroom "bombs" peddled to you with such force by manufacturers. Need whiter whites? There is no bleaching power on earth stronger than the sun. Snow clean your fine rugs. Choose fruits and vegetables from the relatively pesticide residue-free list. Clean felt-tipped pen stains with vodka. Make furniture shine with olive oil and lemon. Your house will also smell as great as it looks.

Water Conservation in Urban Households Sonia Ferdous Hoque 2014-04-14 On the one hand, population and economic growth are increasing the demand for water but on the other, environmental consequences of climate change, pollution and over extraction of groundwater are decreasing the world's supply of fresh water. This makes the availability of water for human use one of the greatest global concerns of this century. Neither levelling growth nor technological innovation can stretch the existing supplies significantly; hence, it is imperative that demand side management techniques such as the use of water efficient fixtures in urban households, appropriate water tariff structure and regulatory policies are used as tools for water conservation. Conservation of water resources is one of the important aspects of ensuring sustainable development of cities and should incorporate environmental, social and economic dimensions. This book highlights the importance of using water efficiently in urban households, in both developed and developing cities. Specifically, the book focuses on: the determinants of water conservation behaviour, including psychological factors such as values, beliefs and attitudes, socio-economic factors such as income, water pricing and policies, environmental factors such as seasonal variations and demographic factors such as household size and age; the role of policies such as mandatory water restrictions, labelling of water saving devices and promotion of public awareness; the role of water and wastewater tariff structures in achieving the goals of revenue generation, affordability, demand management and equity and the design of conservation oriented rate structures; and the role of water saving devices in providing technological solutions to household water conservation. In relation to the above issues, the book provides several detailed case studies of cities to understand the effectiveness of such demand management tools and the lessons learnt. Overall, the book aims to provide a comprehensive overview of the various price and non-price tools that can be used to manage domestic water consumption. Water Conservation in Urban Households is a one-stop repository of

information on water conservation for academics, practitioners and policy makers. The text can be used for teaching and research on water demand management as well as for professional reference by water utility officials. In addition, the appendix of the book contains a database of the current domestic water and wastewater tariffs and monthly bills of selected cities, which will be helpful for those willing to conduct research in this field. Author: Sonia Ferdous Hoque, University of Leeds, UK.

An important feature of the book is the detailed discussion concerning renewal sources of electricity generation, esp. electricity from the Sun and how this is going to be THE energy of future in a matter of a few decades.
