Security Informatics Christopher C. Yang 2010-01-08 Intelligence and Security Informatics (ISI) is defined as the study of the development and use of advanced information systems and technologies for national, international, and societal security-related applications. With the rise of global terrorism, the field has been given an increasing amount of attention from academic researchers, law enforcement, intelligent experts, information technology consultants and practitioners. SECURITY INFORMATICS is global in scope and perspective. Leading experts will be invited as contributing authors from the US, UK, Denmark, Israel, Singapore, Hong Kong, Taiwan, Europe, etc. It is the first systematic, archival volume treatment of the field and will cover the very latest advances in ISI research and practice. It is organized in four major subject areas: (1) Information and Systems Security, (2) Information Sharing and Analysis in Security Informatics, (3) Infrastructure Protection and Emergency Responses, and (4) National Security and Terrorism Informatics.

Conspicuous Compassion Patrick West 2004 "We live in an age of conspicuous compassion. We sport empathy ribbons, send flowers to recently deceased celebrities, weep in public over murdered children, apologize for historical misdemeanors, wear red noses for the starving, go on demonstrations to proclaim 'Drop the Debt' or 'Not in My Name.' We feel each other's pain. We desperately seek a common identity and new social bonds to replace those that have withered in the post-war era - the family, the church, the nation and neighborhood. Mourning sickness is a religion for the lonely crowd that no longer subscribes to orthodox churches. Its flowers and teddies are its rites, its collective minutes' silences its liturgy and mass. This book's thesis is that such displays of empathy do not change the world for the better: they do not help the poor, diseased, dispossessed or bereaved. Our culture of ostentatious caring is about projecting your ego, and informing others what a deeply caring individual you are. It is about feeling good, not doing good, and illustrates not how altruistic we have become, but

how selfish. And, as Patrick West shows in this witty but incisive monograph, sometimes it can be cruel."

Urbanization, Biodiversity and Ecosystem Services: Challenges and Opportunities Thomas Elmqvist 2013-09-21 Urbanization is a global phenomenon and the book emphasizes that this is not just a social-technological process. It is also a social-ecological process where cities are places for nature, and where cities also are dependent on, and have impacts on, the biosphere at different scales from local to global. The book is a global assessment and delivers four main conclusions: Urban areas are expanding faster than urban populations. Half the increase in urban land across the world over the next 20 years will occur in Asia, with the most extensive change expected to take place in India and China Urban areas modify their local and regional climate through the urban heat island effect and by altering precipitation patterns, which together will have significant impacts on net primary production, ecosystem health, and biodiversity Urban expansion will heavily draw on natural resources, including water, on a global scale, and will often consume prime agricultural land, with knock-on effects on biodiversity and ecosystem services elsewhere Future urban expansion will often occur in areas where the capacity for formal governance is restricted, which will constrain the protection of biodiversity and management of ecosystem services

Advances in Quantitative Ethnography Brendan Eagan 2019-10-12 This book constitutes the refereed proceedings of the First International Conference on Quantitative Ethnography, ICQE 2019, held in Madison, Wisconsin, USA, in October 2019. It consists of 23 full and 9 short carefully reviewed papers selected from 52 submissions. The contributions come from a diverse range of fields and perspectives, including learning analytics, history, and systems engineering, all attempting to understand the breadth of human behavior using quantitative ethnographic approaches.

Darwin Day in America John G. West 2014-04-22 At the dawn of the last century, leading scientists and politicians giddily predicted that science—especially Darwinian biology—would supply solutions to all the intractable problems of American society, from crime to poverty to sexual maladjustment. Instead, politics and culture were dehumanized as scientific experts began treating human beings as little more than animals or machines. In criminal justice, these experts denied the existence of free will and proposed replacing punishment with invasive “cures” such as the lobotomy. In welfare, they proposed eliminating the poor by sterilizing those deemed biologically unfit. In business, they urged the selection of workers based on racist theories of human evolution and the development of advertising methods to more effectively manipulate consumer behavior. In sex education, they advocated creating a new sexual morality based on “normal mammalian behavior” without regard to longstanding ethical and religious imperatives. Based on extensive research with primary sources and archival materials, John G. West’s captivating *Darwin Day in America* tells the story of how American public policy has been corrupted by scientific ideology. Marshaling fascinating anecdotes and damning quotations, West’s narrative explores the far-reaching consequences for society when scientists and politicians deny the essential differences between human beings and the rest of nature. It also exposes the disastrous results that ensue when experts claiming to speak for science turn out to be wrong. West concludes with a powerful plea for the restoration of democratic accountability in an age of experts.

Pharmacognosy Shagufta Perveen 2019-06-19 Pharmacognosy is a term derived from the Greek words for drug (pharmakon) and knowledge (gnosis). It is a field of study within Chemistry focused on natural products isolated from different sources and their biological activities. Research on natural products began more than a hundred years ago and has continued up to now with a plethora of research groups discovering new ideas and novel active constituents. This book compiles the latest research in the field and will be of interest to scientists, researchers, and students.

Quantitative Ethnography David Williamson Shaffer 2017 How can we make sense of the deluge of information in the digital age? The new science of Quantitative Ethnography dissolves the boundaries between quantitative and qualitative research to give researchers tools for studying the human side of big data: to understand not just what data says, but what it tells us about the people who created it. Thoughtful, literate, and humane, Quantitative Ethnography integrates data-mining, discourse analysis, psychology, statistics, and ethnography into a brand-new science for understanding what people do and why they do it. Packed with anecdotes, stories, and clear explanations of complex ideas, Quantitative Ethnography is an engaging introduction to research methods for students, an introduction to data science for qualitative researchers, and an introduction to the humanities for statisticians--but also a compelling philosophical and intellectual journey for anyone who wants to understand learning, culture and behavior in the age of big data.

The State of Food Security and Nutrition in the World 2020 Food and Agriculture Organization of the United Nations 2020-07-01 Updates for many countries have made it possible to estimate hunger in the world with greater accuracy this year. In particular, newly accessible data enabled the revision of the entire series of undernourishment estimates for China back to 2000, resulting in a substantial downward shift of the series of the number of undernourished in the world. Nevertheless, the revision confirms the trend reported in past editions: the number of people affected by hunger globally has been slowly on the rise since 2014. The report also shows that the burden of malnutrition in all its forms continues to be a challenge. There has been some progress for child stunting, low birthweight and exclusive breastfeeding, but at a pace that is still too slow. Childhood overweight is not improving and adult obesity is on the rise in all regions. The report complements the usual assessment of food security and nutrition with projections of what the world may look like in 2030, if trends of the last decade continue. Projections show that the world is not on track to achieve Zero Hunger by 2030 and, despite some progress, most indicators are also not on track to meet global nutrition targets. The food security and nutritional status of the most vulnerable population groups is likely to deteriorate further due to the health and socio economic impacts of the COVID-19 pandemic. The report puts a spotlight on diet quality as a critical link between food security and nutrition. Meeting SDG 2 targets will only be possible if people have enough food to eat and if what they are eating is nutritious and affordable. The report also introduces new analysis of the cost and affordability of healthy diets around the world, by region and in different development contexts. It presents valuations of the health and climate-change costs associated with current food consumption patterns, as well as the potential cost savings if food consumption patterns were to shift towards healthy diets that include sustainability considerations. The report then concludes with a discussion of the policies and strategies to transform food systems to ensure affordable healthy diets, as part of the required efforts to end both hunger and all forms of malnutrition.

God and Design Neil A. Manson 2003-09-02 Recent discoveries in physics, cosmology, and biochemistry have captured the public imagination and made the Design Argument - the theory that God created the

world according to a specific plan - the object of renewed scientific and philosophical interest. This accessible but serious introduction to the design problem brings together new perspectives from prominent scientists and philosophers including Paul Davies, Richard Swinburne, Sir Martin Rees, Michael Behe, Elliot Sober and Peter van Inwagen. It probes the relationship between modern science and religious belief, considering their points of conflict and their many points of similarity. Is the real God of creationism the 'master clockmaker' who sets the world's mechanism on a perfectly enduring course, or a miraculous presence who continually intervenes in and alters the world we know? Are science and faith, or evolution and creation, really in conflict at all? Expanding the parameters of a lively and urgent debate, *God and Design* considers how perennial questions of origin continue to fascinate and disturb us.

The Vinland Voyages (Classic Reprint) Matthias Thórdarson 2018-03 Excerpt from *The Vinland Voyages* The striking upheaval of folk energy known as the Viking Age is the background of our story. The books about that period increase, but we grow thereby more in wealth of theory than of fact. It is only a slight overstatement to say that the more we know about the doings of the time the less confident we are about the theories that explain the way things were done. Food Security and Nutrition Charis Michel Galanakis 2020-10-17 Food and nutrition security - identified via availability, access, utilization, and stability - and transitions to sustainable food systems are major discourses in the agro-food arena, as many countries today experience different forms of malnutrition simultaneously, such as child undernutrition, anemia among women, and adult obesity. Meanwhile, the triple burden of malnutrition (undernutrition, overnutrition, and micronutrient deficiency) is still widespread. *Food Security and Nutrition* explores integrated, context-specific approaches to food security challenges, emphasizing nutrition security as an integral component and addressing the implications of food content to food and nutrition security policies. Providing insight into these challenges through agricultural, policy, nutritional, geographic and sustainability lenses, *Food Security and Nutrition* is a valuable reference for food scientists and nutrition researchers working in food supply, food security, and nutrition security, and policy makers, investors, and other decision-makers seeking to address food insecurity around the world. Addresses nutrition security as part of the overall challenge of food security Explores contributing factors that impact both food and nutrition security Presents insights into effective policy development and implementation

Cyber-Physical Systems Security Çetin Kaya Koç 2018-12-06 The chapters in this book present the work of researchers, scientists, engineers, and teachers engaged with developing unified foundations, principles, and technologies for cyber-physical security. They adopt a multidisciplinary approach to solving related problems in next-generation systems, representing views from academia, government bodies, and industrial partners, and their contributions discuss current work on modeling, analyzing, and understanding cyber-physical systems.

Language and Speech Processing Joseph Mariani 2013-03-01 Speech processing addresses various scientific and technological areas. It includes speech analysis and variable rate coding, in order to store or transmit speech. It also covers speech synthesis, especially from text, speech recognition, including speaker and language identification, and spoken language understanding. This book covers the following topics: how to realize speech production and perception systems, how to synthesize and understand speech using state-of-the-art methods in signal processing, pattern recognition, stochastic modelling computational linguistics and human factor studies.

Gender Dysphoria and Gender Incongruence Walter Pierre Bouman 2018-04-19 There is a significant increase in people who self-diagnose as having gender dysphoria and gender incongruence. The number of people with gender dysphoria and gender incongruence who seek assessment, support and treatment at gender identity clinic services has increased substantially over the years globally, and in Europe, North America and Australia in particular. Many countries lack appropriate transgender healthcare services. People with gender dysphoria and/or gender incongruence are often victimized and discriminated against. This book gives an overview regarding mental health and quality of life issues across the life span within the evolving interdisciplinary field of transgender healthcare. The book is written for professionals who in their day-to-day job may encounter people with gender dysphoria and gender incongruence; and for students, teachers, educators, academics, and members of the public at large with an interest in this timely topic. This book was originally published as a special issue of the *International Review of Psychiatry*.

Evidence for God William A. Dembski 2010-07-01 There have always been challenges to belief in God as he is revealed in the Bible and each new year seems to add more questions to the doubter's arsenal. In *Evidence for God*, leading apologists provide compelling arguments that address the most pressing questions of the day about God, science, Jesus, the Bible, and more, including Is Intelligent Design really a credible explanation of the origins of our world? Did Jesus really exist? Is Jesus really the only way to God? What about those who have never heard the gospel? Is the Bible today what was originally written? What about recently publicized gospels that aren't in the Bible? and much more

The Capability Approach Flavio Comim 2010-06-24 The capability approach developed by Nobel Laureate Amartya Sen has become an important new paradigm in thinking about development. However, despite its theoretical and philosophical attractiveness, it has been less easy to measure or to translate into policy. This volume addresses these issues in the context of poverty and justice. Part I offers a set of conceptual essays that debate the strength of the often misunderstood individual focus of the capability approach. Part II investigates the techniques by which we can measure and compare capabilities, and how we can integrate them into poverty comparisons and policy advice. Finally, Part III looks at how we can apply the capability approach to different regions and contexts. Written by a team of international scholars, *The Capability Approach* is a valuable resource for researchers and graduate students concerned with the debate over the value of the capability approach and its potential applications.

Medicinal Plants of East Africa Najma Dharani 2023-02 *Medicinal Plants of East Africa* is a fully illustrated guide to 136 East African plants with important medicinal applications. Initially released in 2010, this fully revised edition updates the species descriptions, photographs and range of medicinal uses, and expands on the pharmacological properties of the plant parts. Supported by more than 600 photographs, the book: * describes the characters and ecology of each plant to aid identification * lists indigenous names of species in 92 languages spoken in the region * details the medicinal uses of the different plant parts by drawing on traditional knowledge * includes recipes for the preparation and administration of remedies used to treat common ailments and afflictions * discusses the active chemical compounds found in each plant to explain and unpack the healing properties at work Covering Kenya, Tanzania, and Uganda, this volume is a vital addition to the bookshelves of botanists, health and wellness practitioners, students, travelers, and all who have an interest in the healing properties of plants.

reliable indicator of the health of our rivers, streams, ponds and wetlands. As environmental awareness within the community increases, there is an increasing interest in the need to assess the health of our local waterways and school curriculums are changing to reflect this important ecological trend. The Waterbug Book provides a comprehensive and accurate identification guide for both professionals and non-professionals. It contains an easy-to-use key to all the macroinvertebrate groups and, for the first time, high quality colour photographs of live specimens. It provides a wealth of basic information on the biology of macroinvertebrates, and describes the SIGNAL method for assessing river health. The Waterbug Book is full of practical tips about where to find various animals, and what their presence can tell about their environment. Winner of the 2003 Eureka Science Book Prize and the 2003 Whitley Medal.

The Rise of the Humans: How to outsmart the digital deluge Dave Coplin 2014-06-02 The rapid growth of our digital world has brought huge advantages - access to information anywhere, at any time, and the ability to communicate with colleagues, family and friends around the globe in real-time. But in other ways, the same technology has also disconnected us. Computers risk becoming less of a productivity tool and more like information firehoses, drowning us in a deluge of data that can keep us from doing meaningful, real work. The devices in our hands connect us like never before, but they vie for our attention to the point where they are beginning to disconnect us from the real world. In this book, Dave Coplin, Chief Envisioning Officer at Microsoft UK, argues that right now it feels like the machines are taking over but if we stop thinking about the digital deluge as a problem and instead see it as an incredible opportunity we will be able to redress the balance. Technology offers our society so much but it is up to us, the humans, to rise to that potential.

Darwin's God Cornelius G. Hunter 2019-10-01 "Cornelius Hunter brilliantly supports his thesis that Darwinism is a mixture of metaphysical dogma and biased scientific observation, that at its core,

evolution is about God, not science."--Phillip E. Johnson, author, Darwin on Trial"Biophysicist Cornelius Hunter argues perceptively that the main supporting pole of the Darwinian tent has always been a theological assertion: 'God wouldn't have done it that way.' Rather than demonstrating that evolution is capable of the wonders they attribute to it, Darwinists rely on a man-made version of God to argue that He never would have made life with the particular suite of features we observe. In lucid and engaging prose, Hunter shines a light on Darwinian theology, making plain what is too often obscured by technical jargon."--Michael J. Behe, Lehigh University"This wonderfully insightful book will prove pivotal in the current reassessment of Darwinian evolution. Darwinists argue that evolution has to be true because no self-respecting deity would have created life the way we find it. Hunter unmasks this theological mode of argumentation and argues convincingly that it is not merely incidental but indeed essential to how Darwinists justify evolution."--William A. Dembski, Baylor University"A fascinating study of a much overlooked aspect of the origins controversy."--Stephen C. Meyer, Whitworth College
