How We Built the Union Pacific Railway Grenville M. Dodge 1870

Jewish Los Angeles Jonathan L. Friedmann 2020-08-24 The first known Jewish resident of the Mexican Pueblo de Los Ángeles arrived in 1841. When California entered the Union in 1850, the census listed just eight Jews living in Los Angeles. By 1855, the fledgling city had a Hebrew Benevolent Society and a Jewish cemetery. The first Jewish congregation and kosher market were established in 1862. Meanwhile, Jewish merchants and business owners founded banks, fraternal orders, charities, athletic clubs, and social service organizations. Jewish property owners developed vast areas of Los Angeles and beyond into the neighborhoods and cities we know today. By 1897, the city's Jewish population was large enough to support its own newspaper. The 20th century brought waves of Jewish immigrants and migrants to Los Angeles, where they built the motion picture and television industries, Cedars-Sinai and City of Hope medical centers, the Jewish Home for the Aging, urban and suburban synagogues and Jewish centers, and other institutions. The foundations laid by these enterprising pioneers helped transform Los Angeles into a major metropolis.

Empire Express David Haward Bain 2000-09-01 After the Civil War, the building of the transcontinental railroad was the nineteenth century's most transformative event. Beginning in 1842 with a visionary's dream to span the continent with twin bands of iron, Empire Express captures three dramatic decades in which the United States effectively doubled in size, fought three wars, and began to discover a new national identity. From self-made entrepreneurs such as the Union Pacific's Thomas Durant and era-defining

figures such as President Lincoln to the thousands of laborers whose backbreaking work made the railroad possible, this extraordinary narrative summons an astonishing array of voices to give new dimension not only to this epic endeavor but also to the culture, political struggles, and social conflicts of an unforgettable period in American history.

Railroaded: The Transcontinentals and the Making of Modern America Richard White 2011-05-31 A Finalist for the Pulitzer Prize: "A powerful book, crowded with telling details and shrewd observations." --Michael Kazin, New York Times Book Review This original, deeply researched history shows the transcontinentals to be pivotal actors in the making of modern America. But the triumphal myths of the golden spike, robber barons larger than life, and an innovative capitalism all die here. Instead we have a new vision of the Gilded Age, often darkly funny, that shows history to be rooted in failure as well as success.

The Production of Difference David R. Roediger 2014-04-10 "In this eye-opening book, David Roediger and Elizabeth Esch offer a radically new way of understanding the history of management in the United States, placing race, migration, and empire at the center of what has sometimes been narrowly seen as a search for efficiency and economy. Ranging from the antebellum period to the coming of the Great Depression, the book examines the extensive literature slave masters produced on how to manage and "develop" slaves; explores what was perhaps the greatest managerial feat in U.S. history, the building of the transcontinental railroad, which pitted Chinese and Irish work gangs against each other; and concludes by looking at how these strategies survive today in the management of hard, low-paying, dangerous jobs in agriculture, military support, and meatpacking. Roediger and Esch convey what slaves, immigrants, and all working people were up against as the objects of managerial control. Managers explicitly ranked racial groups, both in terms of which labor they were best suited for and their relative value compared to others. The authors show how whites relied on such alleged racial knowledge to manage and believed that the "lesser races" could only benefit from their tutelage. These views wove together managerial strategies and white supremacy not only ideologically but practically, every day at workplaces. Even in factories governed by scientific management, the impulse to play races against each other, and to slot workers into jobs categorized by race, constituted powerful management tools used to enforce discipline, lower wages, keep workers on dangerous jobs, and undermine solidarity."--Publisher's description.

The Muleskinner and the Stars Ronald L. Voller 2015-08-28 This is the story of the astronomer Milton La Salle Humason, whose career was integral to developing our understanding of stellar and universal evolution and who helped to build the analytical basis for the work of such notable astronomers and astrophysicists as Paul Merrill, Walter Adams, Alfred Joy, Frederick Seares, Fritz Zwicky, Walter Baade and Edwin Hubble. Humason's unlikely story began on the shores of the Mississippi River in Winona, Minnesota, in 1891 and led to the foot of Mount Wilson outside Los Angeles, California, twelve years later. It is there where he first attended summer camp in 1903 and was captivated by its surroundings. The mountain would become the backdrop for his life and career over the next six decades as he helped first build George Ellery Hale's observatory on the summit and then rose to become one of that institution's leading figures through the first half of the twentieth century. The story chronicles Humason's life on Mount Wilson, from his first trip to the mountain to his days as a muleskinner, leading teams of mules hauling supplies to the summit during the construction of the observatory, and follows him through his extraordinary career in spectroscopy, working beside Edwin Hubble as the two helped to reconstruct our concept of the universe. A patient, knowledgeable and

persistent observer, Humason was later awarded an honorary doctorate for his work, despite having no formal education beyond the eighth grade. His skill at the telescope is legendary. During his career he photographed the spectra of stars, galaxies and other objects many thousands of times fainter than can be seen with the naked eye and pushed the boundary of the known universe deeper into space than any before him. His work, which included assisting in the formulation of Hubble's Law of redshifts, helped to set the field of cosmology solidly on its foundation. Milton Humason was one of the most charismatic characters in science during the first half of the 20th century. Uneducated, streetwise, moonshining, roguish, humble and thoroughly down to earth, he rose by sheer chance, innate ability and incredible will to become the leading deep space observer of his day. "The Renaissance man of Mount Wilson," as Harlow Shapley once referred to him, Humason's extraordinary life reminds us that passion and purpose may find us at any moment.

Yale Under God Roberta Buckingham Mouheb 2012-02-01 "Yale under God" - does it sound unlikely these days? That's probably because of what has been happening in the past few decades in our country. Our colleges - and America - were founded by believers in God, but there are those revisionists who would argue otherwise. In an effort to include all cultures in this melting-pot of a nation, today's humanists with their man-made ideas have cut any mention of God out of classrooms and textbooks, contributing to the decline of American education. This book is an attempt to restore the Christian history of Yale and its town, New Haven. Beginning with the Puritans in 1638 to the present day, it also reveals a dark side of Yale, along with points of "Lux et Veritas" (light and truth). A few years ago Yale celebrated several events that brought out facets of its history - the 300th birthdays of both the University and Jonathan Edwards, one of its first students (1701 and 1703); the 350th birthday of Elihu Yale; and the Amistad Affair, which was made into a movie by Stephen Spielberg. A few people appreciated these events for a moment, but what long-lasting effect did they have? From the author, who worked at Yale for two decades and has lived in New Haven for even longer, comes the hope that this book will shed some light on our past, be a tool in the reader's hands, and ultimately be a guide to future generations.

Iron Rails, Iron Men, and the Race to Link the Nation Martin W. Sandler 2015-09-08 Experience the race of rails to link the country—and meet the men behind this incredible feat—in a riveting story about the building of the transcontinental railroad, brought to life with archival photos. In the 1850s, gold fever swept the West, but people had to walk, sail, or ride horses for months on end to seek their fortune. The question of faster, safer transportation was posed by national leaders. But with 1,800 miles of seemingly impenetrable mountains, searing deserts, and endless plains between the Missouri River and San Francisco, could a transcontinental railroad be built? It seemed impossible. Eventually, two railroad companies, the Central Pacific, which laid the tracks eastward, and the Union Pacific, which moved west, began the job. In one great race between iron men with iron wills, tens of thousands of workers blasted the longest tunnels that had ever been constructed, built the highest bridges that had ever been created, and finally linked the nation by two bands of steel, changing America forever.

A Missouri Railroad Pioneer Joel P. Rhodes 2017-08-15 Lawyer and journalist, entrepreneur and philanthropist, Louis Houck is often called the “Father of Southeast Missouri” because he brought the railroad to the region and opened this backwater area to industrialization and modernization. Although Houck’s name is little known today outside Missouri, Joel Rhodes shows how his story has relevance for both the state and the nation. Rhodes presents a more complete picture of Houck than has ever been available: reviewing his life from his German immigrant roots, considering his career from both social and political perspectives, and grounding the story in both state and national history. He especially tells how, from 1880 to the 1920s, this self-taught railroader constructed a network of five hundred miles of track through the wilderness of wetlands known as “Swampeast Missouri”—and how these “Houck Roads” provided a boost for population, agriculture, lumbering, and commerce that transformed Cape Girardeau and the surrounding area. Rhodes discusses how Houck fits into the era of economic individualism—a time when men with little formal training shaped modern industry—and also gives voice to Houck’s critics

and shows that he was not always an easy man to work with. In telling the story of his railroading enterprise, Rhodes chronicles Houck's battle with the Jay Gould railroad empire and offers key insight into the development of America's railway system, from the cutthroat practices of ruthless entrepreneurs to the often-comic ineptness of start-up rail lines. More than simply a biography of a business entrepreneur, the book tells how Houck not only developed the region economically but also followed the lead of Andrew Carnegie by making art, culture, and formal education available to all social classes. Houck also served for thirty-six years as president of the Board of Regents of Southeast Missouri State Teacher's College, and as a self-taught historian he wrote the first comprehensive accounts of Missouri's territorial period. *A Missouri Railroad Pioneer* chronicles a multifaceted career that transformed a region. Solidly researched, this lively narrative also offers an entertaining read for anyone interested in Missouri history.

Grounded Seth Stevenson 2010-04-06 An eye-opening and fascinating slow travel journey from an acclaimed writer who circled the globe without ever leaving the ground. In this age of globalism and high-speed travel, Seth Stevenson, the witty, thoughtful Slate columnist, takes us back to a time when travel meant putting one foot in front of the other, racing to make connections between trains and buses in remote transit stations, and wading through the chaos that most long-haul travelers float 35,000 feet above. Stevenson winds his way around the world by biking, walking, hiking, riding in rickshaws, freight ships, cruise ships, ancient ferries, buses, and the Trans-Siberian Railway-but never gets on an airplane. He finds that from the ground, one sees the world anew-with a deeper understanding of time, distance, and the vastness of the earth. In this sensational travelogue, each step of the journey is an adventure, full of unexpected revelations in every new port, at every bend in the railroad tracks, and around every street corner.

Waterfront Workers of New Orleans Eric Arnesen 1994 "During the nineteenth century, American and foreign travelers often found New Orleans a delightful, exotic stop on their journeys; few failed to marvel at the riverfront, the center of the city's economic activity. . . . But absent from the tourism industry's historical recollection is any reference to the immigrants or black migrants and their children who constituted the army of laborers along the

riverfront and provided the essential human power to keep the cotton, sugar, and other goods flowing. . . . In examining one diverse group of workers--the 10,000 to 15,000 cotton screwmen, longshoremen, cotton and round freight teamsters, cotton yardmen, railroad freight handlers, and Mississippi River roustabouts--this book focuses primarily on the workplace and the labor movement that emerged along the waterfront."--From the preface

The Chinese and the Iron Road Gordon H. Chang 2019-04-30 The completion of the transcontinental railroad in May 1869 is usually told as a story of national triumph and a key moment for American Manifest Destiny. The Railroad made it possible to cross the country in a matter of days instead of months, paved the way for new settlers to come out west, and helped speed America's entry onto the world stage as a modern nation that spanned a full continent. It also created vast wealth for its four owners, including the fortune with which Leland Stanford would found Stanford University some two decades later. But while the Transcontinental has often been celebrated in national memory, little attention has been paid to the Chinese workers who made up 90 percent of the workforce on the Western portion of the line. The Railroad could not have been built without Chinese labor, but the lives of Chinese railroad workers themselves have been little understood and largely invisible. This landmark volume explores the experiences of Chinese railroad workers and their place in cultural memory. *The Chinese and the Iron Road* illuminates more fully than ever before the interconnected economies of China and the US, how immigration across the Pacific changed both nations, the dynamics of the racism the workers encountered, the conditions under which they labored, and their role in shaping both the history of the railroad and the development of the American West.

Hell's Half Acre Richard F. Selcer 1991-01-01 Texas is a place where legends are made, die, and are revived. Fort Worth, Texas, claims its own legend - Hell's Half Acre - a wild 'n' woolly accumulation of bordellos, cribs, dance houses, and gambling parlors. Tenderloin districts were a fact of life in every major town in the American West, but Hell's Half Acre - its myth and its reality - can be said to be a microcosm of them all. The most famous and infamous westerners visited the Acre: Timothy ("Longhair Jim") Courtright, Luke Short, Bat Masterson, Wyatt Earp, Doc Holliday, Sam Bass, Mary Porter, Etta Place, along with Butch Cassidy and his Wild Bunch, and many more. For civic leaders and reformers, the Acre presented a dilemma - the very establishments they sought to close down or regulate were major contributors to the local economy. Controversial in its heyday and receiving new attention by such movies as *Lonesome Dove*, Hell's Half Acre remains the subject of debate among historians and researchers today. Richard Selcer successfully separates fact from fiction, myth from reality, in this vibrant study of the men and women of Cowntown's notorious Acre.

Parenting for Liberation Trina Greene Brown 2020-06-25 Speaking directly to parents raising Black children in a world of racialized violence, this guidebook combines powerful storytelling with practical exercises, encouraging readers to imagine methods of parenting rooted in liberation rather than fear. In 2016, activist and mother Trina Greene Brown created the virtual multimedia platform Parenting for Liberation to connect, inspire, and uplift Black parents. In this book, she pairs personal anecdotes with open-ended reflective prompts; together, they help readers dismantle harmful narratives about the Black family and imagine anti-oppressive parenting methods. Parenting for Liberation fills a critical gap in currently available, timely parenting resources. Rooted in an Afrofuturistic vision of connectivity and inspiration, the community created within these pages works to image a world that amplifies Black girl magic and Black boy joy, and everything in between. "Trina Greene Brown has created a guide for Black parents who want to raise fierce, fearless, joyful children. She knows what a challenge this is given the state of the world but argues that liberated parenting is possible if we commit to knowing and trusting ourselves, our children, and our communities. Anyone curious about how to walk with a child through tumultuous times needs to read this book now." —Dani McClain, author of *We Live for the We: The Political Power of Black Motherhood*

The Chinese and the Iron Road Gordon H. Chang 2019 This landmark volume sheds light on the lives and experiences of the Chinese workers who made up 90% of the workforce that built the Central Pacific Railroad—but who have been little understood and largely invisible in traditional accounts of the building of the First Transcontinental Railroad.

Principles of Water Resources Thomas V. Cech 2018-04-03 Proper management of water resources can take many forms, and requires the knowledge and expertise to work at the intersection of mathematics, geology, biology, geography, meteorology, political science, and even psychology. This book provides an essential foundation in water management and development concepts and practices, dissecting complex topics into short, understandable explanations that spark true interest in the field. Approaching the study of water resources systematically, the discussion begins with historical perspective before moving on to physical processes, engineering, water chemistry, government regulation, environmental issues, global conflict, and more. Now in its fourth edition, this text provides the most current introduction to a field that is becoming ever more critical as climate change begins to threaten water supplies around the world. As geography, climate, population growth, and technology collide, effective resource management must include a comprehensive understanding of how these forces intermingle and come to life in the water so critical to us all.
