The High-Conflict Couple Alan Fruzzetti 2006-12-03 You hear and read a lot about ways to improve your relationship. But if you've tried these without much success, you're not alone. Many highly reactive couples—pairs that are quick to argue, anger, and blame—need more than just the run-of-the-mill relationship advice to solve their problems in love. When destructive emotions are at the heart of problems in your relationship, no amount of effective communication or intimacy building will fix what ails it. If you're part of a "high-conflict" couple, you need to get control of your emotions first, to stop making things worse, and only then work on building a better relationship. The High-Conflict Couple adapts the powerful techniques of dialectical behavior therapy (DBT) into skills you can use to tame out-of-control emotions that flare up in your relationship. Using mindfulness and distress tolerance techniques, you'll learn how to deescalate angry situations before they have a chance to explode into destructive fights. Other approaches will help you disclose your fears, longings, and other vulnerabilities to your partner and validate his or her experiences in return. You'll discover ways to manage problems with negotiation, not conflict, and to find true acceptance and closeness with the person you love the most.

Childhood Psychotherapy Christa D. Ventling 2001 The consequences of early childhood trauma are often severe and may extend into adulthood resulting in neurotic or even psychotic personality disorders. Separation from a parent at birth or soon afterwards and sexual and/or physical abuse are the traumata seen most often in young children. However, emotional unavailability of the person the child relates to or, on the other hand, overstimulation of a baby can also be disastrous. Treating children at an early age therefore becomes a prime issue in order to prevent more serious damage later on in life. Presented here for the first time is an application of bioenergetic interventions modified to suit young children. The collection of contributions by experienced body-oriented psychotherapists, all in private practice, deals with pregnancy, birth and early childhood, providing insight into both preventive as well as healing aspects. Psychotherapists, psychiatrists and psychologists treating adults, adolescents, and children will find here a new dimension to the classical treatment methods of childhood psychotherapy. Pediatricians and child guidance counselors should also find this volume inspirational.

Instructions for British Servicemen in Germany 1944 Bodleian Library 2007 Nine-and-a-half months after D-Day, 30,000 British troops crossed the Rhine as part of the Allied assault on Germany. Two years earlier, work had already started on a guide to assist them in negotiating everyday life in what then was still enemy territory. This extraordinary document was intended to educate soldiers on a range of topics, including German history, the national character, politics, culture, food and drink, currency, and to explain the current situation, including the effect of war on Germany and the German attitudes to the British. It was also intended to condition them to resist the effect of German propaganda by means of a healthy dose of British propaganda. The result is a remarkable booklet, often unintentionally humorous and sometimes crudely stereotypical, it reads by turns like a travel guide (advising on the excellence of German sausages and beer - 'one of the pleasantest in Europe') and a crash course in psychological warfare. It is very much a document of the period, revealing as much about British wartime attitudes towards Germany as it does about British hopes and fears. 'If you have to give orders to German civilians, give them in a firm, military manner. The German civilian is used to it and expects it.' 'The Germans are not good at controlling their feelings. They have a streak of hysteria. You will find that Germans may often fly into a passion if some little thing goes wrong.' 'Don't be too ready to listen to stories told by attractive women. They may be acting under orders.'

9/11 as a Collective Trauma Hans-Juergen Wirth 2013-05-13 Hans Juergen Wirth, a leading German psychoanalyst and editor of the journal *Psychosozial*, brings cultural breadth, historical perspective, and analytic astuteness to bear in considering the "collective trauma" of 9/11. His meditation, which brings into its compass the psychic structure of suicide bombers and the psycho-political causes and consequences of the Iraq war, is especially insightful in considering the psychological meaning of 9/11 for the world outside the U.S. In complementary forays into psyche and politics, Wirth explores the relationship of xenophobia and violence; the story of Jewish analysts who emigrated from Nazi Germany to the United States; the idea of man in psychoanalysis; and the family dynamics that sustain the AIDS phobia. These wonderfully illuminating essays, both cautionary and constructive, show how clinical experience with the unconscious processes of violence, traumatization, and destructiveness can be foundational to new political strategies for dealing with collective violence.

Neuropsychotherapy Klaus Grawe 2017-09-25 Neuropsychotherapy is intended to inspire further development and continual empirical updating of consistency theory. It is essential for psychotherapists, psychotherapy researchers, clinical psychologists, psychiatrists, neuroscientists, and

mental-health professionals. Profoundly important and innovative, this volume provides necessary know-how for professionals as it connects the findings of modern neuroscience to the insights of psychotherapy. Throughout the book, a new picture unfolds of the empirical grounds of effective psychotherapeutic work. Author Klaus Grawe articulates a comprehensive model of psychological functioning-consistency theory-and bridges the gap between the neurosciences and the understanding of psychological disorders and their treatment. Neuropsychotherapy illustrates that psychotherapy can be even more effective when it is grounded in a neuroscientific approach. Cutting across disciplines that are characteristically disparate, the book identifies the neural foundations of various disorders, suggests specific psychotherapeutic conclusions, and makes neuroscientific knowledge more accessible to psychotherapists. The book's discussion of consistency theory reveals the model is firmly connected to other psychological theoretical approaches, from control theory to cognitive-behavioral models to basic need theories.

A Guide to Third Generation Coaching Reinhard Stelter 2013-08-24 Third generation coaching proposes a form of dialogue where coach and coachee are focused on creating space for reflection through collaborative practices and less concerned with fabricating quick solutions. Aspiring to achieve moments of symmetry between coach and coachee, where their dialogue is driven by a strong emphasis on meaning-making, values, aspirations and identity issues. Coach and coachee meet as fellow-humans in a genuine dialogue. Marking a new trend in coaching, based on the acknowledgement of changes in society, learning and knowledge production, as well as leadership, while distinguishing itself from the existing models (pop coaching, GROW model, etc.). Third generation coaching is based on a fresh analysis of our society - a society that is characterized by diversification, identity challenges, abolition of the monopoly of knowledge, lifelong learning, and the necessity for self-reflection. Providing quality material to guide ambitious practitioners and high level coaching education programs, in an accessible format. A Guide to Third Generation Coaching advocates a revisited and innovative approach to coaching and coaching psychology, advantageous for learners and practitioners alike, by supporting the reader as a reflective practitioner. "In this insightful book Reinhard Stelter takes coaching to a new level. With its new perspective, it will make an outstanding contribution to the field." Prof Stephen Palmer, Centre for Coaching, London, UK, President of the International Society for Coaching Psychology (ISCP) "This book is a wonderful contribution to further theoretical understanding and evidence-based practice within Coaching and Coaching Psychology. Whether you are a coach, coaching psychologist, leader, manager or student, you will find this an excellent resource to expand your thinking, reflection, exploration, and learning on your journey." Diane Brennan, MBA, MCC, Past-President International Coach Federation (ICF) in 2008 "A thoughtful and wide ranging journey through the philosophy of coaching. ProcessMind Arnold Mindell 2012-12-19 Einstein said, “I want to know the mind of God, the rest are details.” This book is therapist Arnold Mindell’s response. By processmind he means an earth-based experience of the universal state of consciousness that, he argues, pervades all reality. It is perhaps our most basic, least known, and greatest power, combining the nonlocality of modern physics with altered states of consciousness found in peak experiences. What makes this book unique is that it offers some experience of this mind-state to the reader. Mindell does so by connecting cosmic patterns seen in physics with experiences occurring in psychology and world spiritual traditions. He draws together ideas about Aboriginal totem spirits, quantum entanglement, and nonlocality to describe the “structure of God experiences.” Enhancing his clear presentation are around 80 illustrations and 30 experiential exercises based on tested approaches that actualize our deepest, unitive consciousness. Through rational thinking and earth-based, inner experience, the reader can sense how the processmind’s self-organizing intelligence helps with dreams, body symptoms, relationships, and large-group conflict issues. Altogether, the book is a kind of user’s guide to tapping into an immense power that can benefit our own individual life and, ultimately, the world.

Virtual Coach, Virtual Mentor David Clutterbuck 2010-10-01 In the case of virtual coaching and mentoring (or e-mentoring and ecoaching; or coaching/mentoring by wire—choose your own preferred nomenclature!) there are hundreds, perhaps thousands of programs and initiatives across the world. Yet there is comparatively little in the way of comparison of good practice or academic evaluation of what does and doesn’t work. We found numerous individual case studies but a dearth of empirical research and no significant collection of cases to illustrate the diversity of applications. *Virtual Coach, Virtual Mentor* provides a wide variety of perspectives on a rapidly growing phenomenon. We hope and intend that it should make a timely and significant contribution to good practice and to encouraging more practitioners and their clients and more organizations to experiment with using electronic media to enrich coaching and mentoring. The view of ecoaching and e-mentoring is firmly one that these new media are less a replacement for traditional face-to-face than an enhancement of learning alliances in general. We see no evidence of fewer face-to-face coaching or mentoring relationships—on the contrary, they continue to become more popular and widespread. Rather, we see that virtual coaching and mentoring both enrich predominantly face-to-face relationships, by connecting partners at times

between formal meetings, and open up coaching and mentoring to new audiences and new applications.

Aggression and Violence Brad J. Bushman 2016-10-14 This book provides a broad and contemporary overview of aggression and violence by some of the most internationally renowned researchers in the field. It begins with an integrative theoretical understanding of aggression and shows how animal models shed light on human aggression and violence. Individual risk factors for aggression and violence from different research perspectives are then examined. First, there is a cognitive neuroscientific, neuropsychological, and psychophysiological study of the brain. It then explores the developmental psychological factors in aggressive behavior, incorporating work on gender and the family. Other perspectives include the role of testosterone, individual differences, and whether humans are innately wired for violence. The following sections moves from the individual to the contextual risk factors for aggression, including work on the effects of adverse events and ostracism, guns and other aggressive cues including violent media, and drugs and alcohol. Targets of aggression and violence are covered in the next section, including violence against women and loved ones; aggression between social groups; and the two very contemporary issues of cyberbullying and terrorism. The book concludes with work showing how we may make the world a more peaceful place by preventing and reducing aggression and violence. The volume is essential reading for upper-level students and researchers of psychology and related disciplines interested in a rigorous and multi-perspective overview of work on aggression and violence.

My Nonidentical Twin Evie Meg - This Trippy Hippie 2021-10-28 *Order now to read the long-awaited debut book from the huge TikTok sensation Evie Meg | This Trippy Hippie!* Hey guys, you might know me already from one of my social media channels where I talk about the highs and lows of living with Tourette's Syndrome. I've loved sharing those times with you and - as there are lots of things I can't fit into a 60 second video - I've decided to write a book! It's the full story of how I came to be diagnosed and how having Tourette's has changed my life. Writing it has given me an opportunity to talk about things I haven't felt ready to share before - for some reason it's easier to put down private things in written words than in a video! I talk about the many other illnesses I've been through and the dreams that it's affected - about my school days, relationships and my very lowest points - but I also talk about what I've managed to achieve in spite of all the obstacles. I hope it'll make you laugh and make you think, and empower you to realise that no matter what you're facing in life, there are always ways to deal with the challenges. It's also so important to me that people understand what life is like with a disability, so we can be compassionate towards each other. I've bared my soul in this book to hopefully help others to do this. I'm so excited (and just a little bit nervous) for you to read it! Evie Meg xxx

Meta-Emotion John Mordechai Gottman 2013-02-01 This book describes research on the emotional communication between parents and children and its effect on the children's emotional development. Inspired by the work, and dedicated to the memory of Dr. Haim Ginott, it presents the results of initial exploratory work with meta-emotion--feelings about feelings. The initial study of meta-emotion generated some theory and made it possible to propose a research agenda. Clearly replication is necessary, and experiments are needed to test the path analytic models which have been developed from the authors' correlational data. The authors hope that other researchers will find these ideas interesting and stimulating, and will inspire investigation in this exciting new area of a family's emotional life.

Bearing Witness Sandra L Bloom 2014-02-25 Bearing Witness: Violence and Collective Responsibility offers a unique layperson's introduction to the scope and causes of violence and trauma theory and suggests ways we can all work to attack these causes. Upon completing this work, you will have a better understanding of the social causes of the violence epidemic and concrete suggestions for its long-term control. Bearing Witness addresses the cycle of violence by discussing some of the biological, psychological, social, and moral issues that go into determining whether a person will end up as a victim, perpetrator, or bystander to violent events and what happens to us when we are in one or all three of these roles. The authors look at a number of intersecting factors that play interdependent roles in creating a culture that promotes, supports, and even encourages violence. Specifically, you'll gain invaluable insight into: trauma theory and traumatogenic forces--backdrops against which the chances of exposure to violence and the use of violence as a problemsolver are increased normal human development in the context of attachment theory and what occurs as a result of disrupted attachment bonds how rapid changes in modern society and the breakdown of the traditional family structure contribute to a level of social stress that promotes violence violence in the family, in the workplace, and in the schools--all places to which people turn for security social responses to violence--the ways in which certain responses decrease or increase the likelihood of violence the unhealthy balance of power between the genders and how violence or the threat of violence maintains this imbalance how our cultural standard of disavowing our normal emotional experience sets the stage for repeated and regular empathic failure, which leads to violence A framework for understanding the various aspects of the problem of violence, Bearing Witness delves into the various aspects of trauma--what trauma does to the body, the mind, the emotions, and relationships--before beginning to formulate proposals for initiating processes that lead to problemsolving. Once this knowledge base has been established, the authors give you the beginnings of an outline for reorganizing society with the aim of establishing a community that is responsive to the basic human need for safety and peace.

Coaching im Grenzbereich Isa Schlott 2022-04-06 Wie arbeite ich als Coach auf der Grenze zwischen Psychotherapie und Coaching? Noch Unsicherheit oder schon Angst? Stress oder Burn-out? Under Observation Manfred Rauchensteiner 2018-11-12 Every time that something happened in Austria after 1918, the country was under observation: as German-Austria, the First Republic, the Corporative State, the Alpine and Danubian Gaue of the Greater German Reich, the Second Republic – right up to the present day. People looked, heard and generally did not keep silent, and this has not changed. As though Austria were still the same testing ground for the end of the world that Karl Kraus described it as. A gripping and varied overview of Austrian history over the last 100 years.

Revealing the Inner Worlds of Young Children Robert N. Emde 2003 This book reports the work of a 20-year collaboration between a multidisciplinary group of clinicians and developmental scientists who have created and investigated a new tool to elicit and analyze children's narratives. This tool is the MacArthur Story Stem Battery, a systematic collection of story beginnings that are referred to as 'stems.' These stems are designed to elicit information from children about their representational worlds. This method is particularly exciting because using it allows developmental psychologists and others to gain information directly from children about their emotional states and what they are able to understand, and in turn, to use this information to explore significant emotional differences among children. This work will appeal to researchers and practitioners in developmental and clinical psychology.

Sequential Traumatization in Children Hans Keilson 1992 A clinical and statistical follow-up study on the fate of Jewish war orphans from The Netherlands.

Making Science Stephen Cole 1992 The sociology of science is dominated today by relativists who boldly argue that the content of science is not influenced by evidence from the empirical world but is instead socially constructed in the laboratory. Making Science is the first serious critique by a sociologist of the social constructivist position. Stephen Cole begins by making a distinction between two kinds of knowledge: the core, which consists of those contributions that have passed the test of evaluation and are universally accepted as true and important, and the research frontier, which is composed of all work in progress that is still under evaluation. Of the thousands of scientific contributions made each year, only a handful end up in the core. What distinguishes those that are successful? Agreeing with the constructivists, Cole argues that there exists no set of rules that enables scientists to certify the validity of frontier knowledge. This knowledge is "underdetermined" by the evidence, and therefore social factors--such as professional characteristics and intellectual authority--can and do play a crucial role in its evaluation. But Cole parts company with the constructivists when he asserts that it is impossible to understand which frontier knowledge wins a place in the core without first considering the cognitive characteristics of the contributions. He concludes that although the focus of scientific research, the rate of advance, and indeed the everyday making of science are influenced by social variables and processes, the content of the core of science is constrained by nature. In Making Science, Cole shows how social variables and cognitive variables interact in the evaluation of frontier knowledge.

Hurting for Love Herbert A. Schreier 1993-05-21 This book offers a comprehensive, detailed examination of MBPS. Written by leading authorities, it covers all known clinical, medical, psychological, social and legal aspects of the disorder, including detection, dynamics, treatment, and clinical management. Based on their own experiences evaluating and treating these patients, the authors present an innovative theory of the disorder as a form of imposturing. Detailed psychological test data on a group of MBPS mothers are presented for the first time to enhance our understanding of the cognitive and psychological makeup of parents who fabricate illness in their children. The text also contains a thoughtful discussion of the larger social context of women in our society and in our medical institutions--a discussion crucial to our understanding of why MBPS is predominantly a disorder of women.
