Children of the Turtle Jacques L. Condor 2003-10-26 From Aztec to Zuni, here are portraits of the daily lives of the First Nations people who lived and still live on the continent of North America; the great floating island the Northeastern woodland tribes called Turtle Island. Songs, chants and legends from the tip of southern Mexico to Alaska and Arctic Canada are included. Covering a time span of a thousand years, the book includes tribes now decimated or who are a nearly forgotten and rarely mentioned part of history. This book of word-sketches paints a picture of their world: at times harsh and cruel, at other times spiritual and filled with beauty. These word-sketches convey the humanness of the original inhabitants of Turtle Island, the Native American Indians; paints them as neither noble nor savage, but simply as people who learned to live with nature's challenges and hardships and to endure. To read these portraits of tribes and individuals, their land and customs, their needs, both physical and spiritual, is to understand the magnificent heritage that is the gift to the world from Native American Indian people.

The techniques outlined will help ensure that test methods and data collected reflect actual device performance, rather than 'testing the tester' or being lost in the noise floor. This book addresses the fundamental issues underlying the semiconductor test discipline. The test engineer must understand the basic principles of semiconductor fabrication and process and have an in-depth knowledge of circuit functions, instrumentation and noise sources. Introduces a novel component-testing philosophy for semiconductor test, product and design engineers Best new source of information for experienced semiconductor engineers as well as entry-level personnel Eight chapters about semiconductor testing

Tom Swift and His Hypersonic SpacePlane Thomas Hudson 2019-12-20 In the 29th novel of this series, Tom Swift decides to "dust off" and see if he can make an early dream come true. At the age of sixteen he had built a small jet he called his Nuclear Hyperplane. It was anything but either of those things. Now, nearly sixteen years later he believes he might do something to make that dream come true. He sets out to design an aircraft that might travel at five times the speed of sound. Because he is aware that he cannot continuously spend without bringing some sales into Swift Enterprises, he plans to build a hypersonic passenger jet capable of getting half way around the world in about three-and-a-half hours. It is an ambitious plan. It comes to the attention of at least two unfriendly entities, both of whom try to ruin his plans; at least one believes that killing the inventor is the way to accomplish this. By taking things in little steps, he inches closer and closer to his dream, but can he manage to do it while remaining safe?

**Educating the Engineer of 2020** National Academy of Engineering 2005-10-06 Educating the Engineer of 2020 is grounded by the observations, questions, and conclusions presented in the best-selling book The Engineer of 2020: Visions of Engineering in the New Century. This new book offers recommendations on how to enrich and broaden engineering education so graduates are better prepared to work in a constantly changing global economy. It notes the importance of improving recruitment and retention of students and making the learning experience more meaningful to them. It also discusses the value of considering changes in engineering education in the broader context of enhancing the status of the engineering profession and improving the public understanding of engineering. Although certain basics of engineering will not change in the future, the explosion of knowledge, the global economy, and the way engineers work will reflect an ongoing evolution. If the United States is to maintain its economic leadership and be able to sustain its share of high-technology jobs, it must prepare for this wave of change.

Global Tuberculosis Control World Health Organization 2009 This report is WHO's thirteenth annual report on global tuberculosis (TB) control in a series that started in 1997. It presents WHO's latest assessment of the epidemiological burden of TB (numbers of cases and deaths), as well as progress towards the 2015 targets for global TB control that have been established within the context of the Millennium Development Goals (MDGs). It also includes a thorough analysis of implementation and financing of the WHO's Stop TB Strategy and the Stop TB Partnership's Global Plan to Stop TB, since in combination these have set out how TB control needs to be implemented and funded to achieve the 2015 targets. The report gives particular attention to the period 2006-2009, but selected

epidemiological, implementation and financial data are presented for previous years as well. This includes epidemiological data back to 1990 and financial data back to 2002. Bringing together data reported by 196 out of 212 countries and territories in 2008, as well as data collected from these countries and territories in previous years, "Global Tuberculosis Control 2009" is the definitive source of information about the national and international response to the worldwide TB epidemic.

Principles of Concurrent and Distributed Programming M. Ben-Ari 2015-11-09 Principles of Concurrent and Distributed Programming provides an introduction to concurrent programming focusing on general principles and not on specific systems. Software today is inherently concurrent or distributed - from event-based GUI designs to operating and real-time systems to Internet applications. The new edition of this classic introduction to concurrency has been completely revised in view of the growing importance of concurrency constructs embedded in programming languages and of formal methods such as model checking that are widely used in industry.

*Design for Manufacturability and Statistical Design* Michael Orshansky 2007-10-28 Design for Manufacturability and Statistical Design: A Comprehensive Approach presents a comprehensive overview of methods that need to be mastered in understanding state-of-the-art design for manufacturability and statistical design methodologies. Broadly, design for manufacturability is a set of techniques that attempt to fix the systematic sources of variability, such as those due to photolithography and CMP. Statistical design, on the other hand, deals with the random sources of

**Reality Radio** John Biewen 2010-03-15 Over the last few decades, the radio documentary has developed into a strikingly vibrant form of creative expression. Millions of listeners hear arresting, intimate storytelling from an ever-widening array of producers on programs including *This American Life*, *StoryCorps*, and *Radio Lab*; online through such sites as *Transom*, the *Public Radio Exchange*, *Hearing Voices*, and *Soundprint*; and through a growing collection of podcasts. *Reality Radio* celebrates today's best audio documentary work by bringing together some of the most influential and innovative practitioners from the United States, Canada, the United Kingdom, and Australia. In these nineteen essays, documentary artists tell—and demonstrate, through stories and transcripts—how they make radio the way they do, and why. Whether the contributors to the volume call themselves journalists, storytellers, even audio artists—and although their essays are just as diverse in content and approach—all use sound to tell true stories, artfully. **Antistatic Sprays** National Aeronautics and Space Adm Nasa 2018-10-25 Antistatic sprays from several different manufacturers are examined. The sprays are examined for contamination potential (i.e., outgassing and nonvolatile residue), corrosiveness on an aluminum mirror surface, and electrostatic effectiveness. In addition, the chemical composition of the antistatic sprays is determined by infrared spectrophotometry, mass spectrometry, and ultraviolet spectrophotometry. The results show that 12 of the 17 antistatic sprays examined have a low contamination potential. Of these sprays, 7 are also noncorrosive to an aluminum surface. And of these, only 2 demonstrate good electrostatic properties with respect to reducing voltage accumulation; these sprays did not show a fast voltage dissipation rate however. The results indicate that antistatic sprays can be used on a limited basis where contamination potential, corrosiveness, and electrostatic effectiveness is not critical. Each application is different and proper evaluation of the situation is necessary. Information on some of the properties of some antistatic sprays is presented in this document to aid in the evaluation process. Ming, James E. Goddard Space Flight Center

*Retooling* Rosalind Williams 2003-08-11 A humanistic account of the changing role of technology in society, by a historian and a former Dean of Students and Undergraduate Education at MIT. When Warren Kendall Lewis left Spring Garden Farm in Delaware in 1901 to enter MIT, he had no idea that he was becoming part of a profession that would bring untold good to his country but would also contribute to the death of his family's farm. In this book written a century later, Professor Lewis's granddaughter, a cultural historian who has served in the administration of MIT, uses her grandfather's and her own experience to make sense of the rapidly changing role of technology in contemporary life. Rosalind Williams served as Dean of Students and Undergraduate Education at MIT from 1995 through 2000. From this vantage point, she watched a wave of changes, some planned and some unexpected, transform many aspects of social and working life—from how students are taught to how research and accounting are done—at this major site of technological innovation. In *Retooling*, she uses this local knowledge to draw more general insights into contemporary society's obsession with technology. Today technology-driven change defines human desires, anxieties, memories, imagination, and experiences of time and space in unprecedented ways. But technology, and specifically information technology, does not simply influence culture and society; it is itself inherently cultural and social. If there is to be any reconciliation between technological change and community, Williams argues, it will come from connecting technological and social innovation—a connection demonstrated in the history that unfolds

in this absorbing book.
