Treating Adult Survivors of Childhood Emotional Abuse and Neglect Elizabeth K. Hopper 2018-12-11 Grounded in 40 years of clinical practice and research, this book provides a systematic yet flexible evidence-informed framework for treating adult survivors of complex trauma, particularly those exposed to chronic emotional abuse or neglect. Component-based psychotherapy (CBP) addresses four primary treatment components that can be tailored to each client's unique needs--relationship, regulation, dissociative parts, and narrative. Vivid extended case examples illustrate CBP intervention strategies and bring to life both the client's and therapist's internal experiences. The appendix features a reproducible multipage clinician self-assessment tool that can be downloaded and printed in a convenient 8 1/2" x 11" size. See also Treating Traumatic Stress in Children and Adolescents, Second Edition, by Margaret E. Blaustein and Kristine M. Kinniburgh, which presents a complementary approach for children and adolescents.

A Generation at Risk John Williamson 2005-09-12 With a Foreword by Desmond Tutu, Generation at Risk brings insightful perspectives from experienced practitioners and researchers on how a better future can be secured for the millions of children who are being orphaned or made vulnerable by HIV/AIDS. The current situation of these children is grim, and while there has been significant action by governments, international organizations, religious bodies, and non-governmental organizations, the vast majority of children made vulnerable by AIDS have not benefited from any assistance beyond their own extended family and community. A Generation at Risk explains in straightforward terms what is required to fill this gap. The book addresses what needs to be done in the areas of education, community mobilization and capacity building,

economic strengthening at household and community levels, psychosocial support, and the protection of children and the fulfilment of their rights.

**The Wisdom of the Ego** George E. Vaillant 1998-07-21 One of America's preeminent psychiatrists draws on his famous Study of Adult Development to give us an exhilarating look at how the mind's defenses work. What we see as the mind's trickery, George Vaillant tells us, is actually healthy. What's more, it can reveal the mind at its most creative and mature, soothing and protecting us in the face of unbearable reality, managing the unmanageable, ordering disorder. And because creativity is so intrinsic to this alchemy of the ego, Vaillant mingles his studies of obscure lives with psychobiographies of famous artists and others--including Florence Nightingale, Sylvia Plath, Anna Freud, and Eugene O'Neill.

**Understanding the Paradox of Surviving Childhood Trauma** Joanne Zucchetto 2019-07-25 Understanding the Paradox of Surviving Childhood Trauma offers clinicians a new framework for understanding the symptoms and coping mechanisms displayed by survivors of childhood abuse. This approach considers how characteristics such as suicidality, self-harm, persistent depression, and anxiety can have roots in behaviors and beliefs that helped patients survive their trauma. This book provides practitioners with case examples, practical tips, and techniques for applying this mindset directly to their most complex cases. By depathologizing patients' experiences and behaviors, and moving beyond simply managing them, therapists can reduce their clients' shame and work collaboratively to understand the underlying message that these behaviors conceal.

**The Routledge International Handbook of Philosophies and Theories of Early Childhood Education and Care** Tricia David 2015-10-05 The Routledge Handbook of Philosophies and Theories of Early Childhood Education and Care brings together leading writers in the field to provide a much-needed, authoritative guide to the major philosophies and theories which have shaped approaches to Early Childhood Education and Care. Providing a detailed overview of key concepts, debates and practical challenges, the handbook combines theoretical acumen with specific examples to show how philosophies and theories have evolved over the centuries and their impact on policy and society. It examines the ways in which societies define and make sense of childhood and the factors that influence the development of philosophies about young children and their learning. The collection offers an insight into the key theorists and considers how the economics and politics of their time and personal ideology influenced their ideas about childhood. It looks at curricula and provision which have proved inspirational and how these have impacted on policy and practice in different parts of the world. The handbook also explores alternative and perhaps less familiar philosophies and ideas about babies and young children, their place in society and the ways in which it might be appropriate to educate them Bringing together specially commissioned pieces by a range of international authors, this handbook will enable academics, research students, practitioners and policy-makers to reflect on their own understandings and approaches, as well as the assumptions made in their own and other societies.

Knowing Differently Pranee Liamputtong 2008 This book explores the experiential research methods (arts-based, reflexive, collaborative) that allow researchers to access their own and their participants' knowing in richer ways. It offers methodological discussions and first-person accounts of experiences in using these methods in order to fire the imagination of students and researchers. **Parenting After the Death of a Child** Jennifer L. Buckle 2011-01-19 The death of a child has a tremendous and overwhelming impact on parents and siblings, completely altering the psychological landscape of the family. In the aftermath of such a tragedy, parents face the challenge of not only dealing with their own grief, but also that of their surviving children. How can someone attempt to cease parenting a deceased child while maintaining this role with his/her other children? Is it possible for a mother or father to effectively deal with feelings of grief and loss while simultaneously helping their surviving children? *Parenting After the Death of a Child: A Practitioner's Guide* addresses this complex and daunting dilemma. Following on the heels of a qualitative research study that involved interviewing bereaved parents, both fathers and mothers, Buckle and Fleming have put together several different stories of loss and recovery to create an invaluable resource for clinicians, students, and grieving parents. The authors present the experience of losing a child and its subsequent impact on a family in a novel and effective way, demonstrating the strength and importance of their book for the counseling field.

*Nobody's Child* Diane Sher Lutovich 2016-12-05 When Diane Sher Lutovich set out to attain closure of her mother's death she simultaneously discovered how other women address their losses. "*Nobody's Child: How Older Women Say Good-bye to Their Mothers*", in poetry and prose, tells the big and little stories of women who, having come of age during the feminist revolution, lived very different lives than their mothers. The author addresses the guilt a daughter feels when confronted by her mother's life choices, the loss of family history and a belated recognition of her mother's legacy. The voices are heard within these pages, giving occasion for the reader to learn about the multiplicity of feelings-including remorse, fear, frustration, compassion, and deep admiration-that many daughters experience at their mother's passing.

**Suicide Prevention** Kristine Bertini 2016-03-28 Written by a clinical psychologist and illustrated with vignettes from the author's experience, this book offers a clear understanding of how suicidal thought develops, how we can help prevent death from suicide, and how suicidal people can recover and change their way of thinking. • Presents practical information of critical importance that can help prevent death from suicide • Specifically written to serve one of the highest risk and most vulnerable groups to suicide (youth ages 15–24) and provides them with information and resources to save lives • Provides real hope and "a way out" to those feeling suicidal

**Vietnamese Migrants in Australia and the Global Digital Diaspora** Anh Nguyen Austen 2022-09-16 Through oral histories, memoirs, and Facebook posts of Vietnamese adults who entered Australia as children after the Vietnam War (and Vietnamese refugees, war orphans, and children of refugees) this book provides insight into the memories of forced migrant childhoods and histories, as well as the complexities of national and transnational identity and belonging in digital diaspora. As war and displacement compounds the need for creating communities and histories for cultural continuity, this book is a history about

childhood and migration for the Vietnamese diaspora of refugees, adoptees, and second generation in Australia and their connectedness to a global and digital diaspora. Using Facebook as a digital archive for historical research, *Vietnamese Migrants in Australia and the Global Digital Diaspora* presents new methods for the study of what Nguyen Austen proposes as a new area of digital diaspora studies for interdisciplinary research about real and digital life in the humanities and social sciences. As a contemporary digital diaspora study of Vietnamese forced child migrants from 1975 to the present, this book contains a mixed-methods historical analysis of the impact of war and displacement on memories of childhood. This book presents an innovative history of the national, transnational, digital, and contemporaneous lives of Vietnamese child migrants, which will make a significant contribution to the discourse on transnational childhood, migration, and belonging for refugees and migrants in the twenty-first century.

**The Art of Choosing** Sheena Iyengar 2010-04-01 Every day we make choices. Coke or Pepsi? Save or spend? Stay or go? Whether mundane or life-altering, these choices define us and shape our lives. Sheena Iyengar asks the difficult questions about how and why we choose: Is the desire for choice innate or bound by culture? Why do we sometimes choose against our best interests? How much control do we really have over what we choose? Sheena Iyengar's award-winning research reveals that the answers are surprising and profound. In our world of shifting political and cultural forces, technological revolution, and interconnected commerce, our decisions have far-reaching consequences. Use *The Art of Choosing* as your companion and guide for the many challenges ahead.

*The Changing Faces of Childhood Cancer* Joanna Baines 2014-12-18 This book traces the development of British answers to the problem of childhood cancer. The establishment of the NHS and better training for paediatricians, meant children were given access to experimental chemotherapy, sending cure rates soaring. Children with cancer were thrust into the spotlight as individuals' stories of hope hit the headlines.

*The Mother-Infant Nexus in Anthropology* Rebecca Gowland 2019-10-25 Over the past 20 years there has been increased research traction in the anthropology of childhood. However, infancy, the pregnant body and motherhood continue to be marginalised. This book will focus on the mother-infant relationship and the variable constructions of this dyad across cultures, including conceptualisations of the pregnant body, the beginnings of life, and implications for health. This is particularly topical because there is a burgeoning awareness within anthropology regarding the centrality of mother-infant interactions for understanding the evolution of our species, infant and maternal health and care strategies, epigenetic change, and biological and social development. This book will bring together cultural and biological anthropologists and archaeologists to examine the infant-maternal interface in past societies. It will showcase innovative theoretical and methodological approaches towards understanding societal constructions of foetal, infant and maternal bodies. It will emphasise their interconnectivity and will explore the

broader significance of the mother/infant nexus for overall population well-being.

A Brief History of the Paradox Roy Sorensen 2003-12-04  
Can God create a stone too heavy for him to lift? Can time have a beginning? Which came first, the chicken or the egg? Riddles, paradoxes, conundrums--for millennia the human mind has found such knotty logical problems both perplexing and irresistible. Now Roy Sorensen offers the first narrative history of paradoxes, a fascinating and eye-opening account that extends from the ancient Greeks, through the Middle Ages, the Enlightenment, and into the twentieth century. When Augustine asked what God was doing before He made the world, he was told: "Preparing hell for people who ask questions like that." A Brief History of the Paradox takes a close look at "questions like that" and the philosophers who have asked them, beginning with the folk riddles that inspired Anaximander to erect the first metaphysical system and ending with such thinkers as Lewis Carroll, Ludwig Wittgenstein, and W.V. Quine. Organized chronologically, the book is divided into twenty-four chapters, each of which pairs a philosopher with a major paradox, allowing for extended consideration and putting a human face on the strategies that have been taken toward these puzzles. Readers get to follow the minds of Zeno, Socrates, Aquinas, Ockham, Pascal, Kant, Hegel, and many other major philosophers deep inside the tangles of paradox, looking for, and sometimes finding, a way out. Filled with illuminating anecdotes and vividly written, A Brief History of the Paradox will appeal to anyone who finds trying to answer unanswerable questions a paradoxically pleasant endeavor.

**Childhood Cancer** Adolf E. Christ 2012-12-06  
The past decade has brought extraordinary gains in the outlook for children stricken with cancer. Though cancer remains a leading cause of death for children and young adults, more victims of childhood cancer today will survive than will die. The therapeutic advances and the optimism they instill have prompted researchers and clinicians to analyze the impact of cancer upon young patients and their families and to devise more effective intervention strategies. Hope and survival, juxtaposed with the continuing high mortality associated with certain forms of the illness, add new challenges to management of the psychosocial aspects of cancer. To respond to these challenges we need research as rigorous as that which continues to make inroads in treating the physical illness. This specific

concern for the needs of children suffering from cancer and their families has paralleled an increasing sensitivity on the part of the medical community and the public at large to the limitations of specialized, high technology health care practices.

**Paradox** A. J. Paquette 2013 When Ava finds herself on a desolate alien planet with no memory of her past, she must survive and somehow discover her mission to save the Earth from a fearsome virus. By the author of Nowhere Girl.

**Play: Psychoanalytic Perspectives, Survival and Human Development** Emilia Perroni 2013-08-15 Is play only a children's activity? How is the spontaneous play of adults expressed? What is the difference between "play" and "game"? What function does play have during war? Play:Psychoanalytic Perspectives, Survival and Human Development explores the importance of play in the life of the individual and in society. Most people associate psychoanalysis with hidden and "negative" instincts, like sexuality and aggressiveness, very seldom with "positive urges" like the importance of love and empathy, and almost never with play. Play, which occupies a special place in our mental life, is not merely a children's activity. Both in children and adults, the lack of play or the incapacity to play almost always has a traumatic cause – this book also shows the crucial importance of play in relation to the survival in warfare and during traumatic times. In this book Emilia Perroni argues that whether we regard play as a spontaneous creation or whether we see it as an enjoyable activity with defined rules (a game), that it is impossible to conceive human existence and civilization without it. The papers collected in this book are the results of the research offered on the subject of play by several Israeli therapists from different psychoanalytic schools Freudian, Jungian, Kleinian, Winnicottian and Self-Psychology. Other contributions are from Israeli researchers and academics from various fields such as literature, music, art, theatre and cinema, contemporary psychoanalysis and other disciplines. Play: Psychoanalytic Perspectives, Survival and Human Development offers new ways to think about, and understand, play as a search for meaning, and as a way of becoming oneself. This book will be of interest to psychoanalysts, researchers, therapists, parents, teachers and students who are interested in the application of psychoanalytic theory to their fields including students of cultural studies, art, music, philosophy. Emilia Perroni is a clinical psychologist, supervisor at the School of Psychoanalytic Psychotherapy at the University of Tel Aviv and the Bar Ilan University. She has a private practice in Jerusalem and in Tel Aviv. She is a member of the Israeli Association of Psychoanalytic Psychotherapy, the Israeli Association of Psychotherapy, she is an Associated-Member of the Israeli Institute of Jungian Psychology, and Research Fellow at the Van Leer Institute in Jerusalem.

Understanding Schemas and Emotion in Early Childhood Cath Arnold 2010-01-30 Understanding Schemas and Emotion in Early Childhood makes explicit connections between young children's spontaneous repeated actions and their representations of their emotional worlds. Drawing on the literature on schemas, attachment theory and family contexts, the author takes schema theory into the territory

of the emotions, making it relevant to the social and emotional development strand in early childhood education. Based on research carried out alongside children, parents, workers and co-researchers at the world-famous Pen Green Nursery, and using case studies of a small number of individual children, the author shows new links between cognition and affect. The book includes a brief summary of a method of Child Study, using video and reflections on video sequences.

Attachment and Human Survival Marci Green 2018-04-24 What is it about childhood experiences that influence the kind of adult we become? For John Bowlby and others who developed Attachment theory, much of the answer lies in the quality of early attachments to our primary caregivers. When those attachments are secure, we can develop a safe sense of self. When insecure, we may go on seeking safety throughout our lives, in inappropriate and painful ways. Attachment, argued Bowlby, is a matter for individual and species survival. Using principles pioneered by Bowlby, this volume explores the importance of attachments to individuals and communities. Drawing on the work of leading figures in the field of Attachment research and clinical practice, this book introduces readers to the basic ideas and applications of Attachment theory. Chapters explore, for example, the role of attachment experience in brain development, the cultural and institutional contexts in which attachment systems operate, the political consequences of personal suffering and the uses of Attachment theory in psychotherapy.

*Deaf Children* Lynn S. Liben 2013-09-24 *Deaf Children: Developmental Perspectives* aims to identify new areas of research, evaluation, and application related to deafness. The book discusses the development of deaf children; the methodological issues in research with deaf children; and the structural properties of American sign language. The text also describes the acquisition of signed and spoken language; speculations concerning deafness and learning to read; future prospects in language and communication for the congenitally deaf. The role of vision in language acquisition by deaf children; research and clinical issues on impulse control in deaf children; and the effects of deafness on childhood development are also considered. The book further tackles the education implications of research and theory with the deaf; developmental perspectives on the experiential deficiencies of deaf children; and the development of the deaf individual and the deaf community. Scholars interested in more general issues within disciplines such as sociology, developmental psychology, linguistics, psycholinguistics, experimental psychology, communication, clinical psychology, psychiatry, and education will find the text invaluable.

Children in Street Situations Riccardo Lucchini 2019-11-05 This book provides new insights on the lives of children in street situations by providing analyses from a qualitative perspective on the sociology of childhood. It proposes some insightful perspectives on the current discussion about the rights of children in street situations. It includes a unique selection of texts, which were initially published in French, written by the authors of this

volume, on the lives of children in street situations in Latin America and China, that are now available to an English readership. It challenges obstacles, linked to macrosocial issues such as inequalities, images of the child, the separation of public/private spheres, urban dynamics and structural adjustments, as well as to microsocial dimensions such as identity, motivation, and activities that are constitutive of street situations. The book discusses the situations experienced by children, highlighting children's reflexivity and strategies as social factors, and shedding new light on the debate "agency within structure".

*Mother Without Child* Elaine Tuttle Hansen 1997-01-01 "This is a conceptually innovative book which expands the meaning of motherhood to include mothers 'without child'; it is also a compassionate political book which refuses the boundary between 'good enough' and 'bad' mothers. *Mother Without Child* is an engaging, witty, and provocative literary study which should fascinate anyone who is interested in mothering or in looking for new ways to talk about motherhood without erasing some women's experience or dividing mothers from each other."--Sara Ruddick, author of *Maternal Thinking: Toward a Politics of Peace* "Hansen positions her study in a genuinely new space . . . taboo ground, which demands not only a great deal of courage to address, but also enormous intelligence and insight. Hansen is up to this task. . . hers is a pioneer study that will have a significant impact on the ways that non-procreative motherhood is discussed and understood." --Madelon Sprengnether, author of *The Spectral Mother: Freud, Feminism, and Psychoanalysis* "Since the beginnings of the second wave of feminism in the 1960s, feminist scholars have been obsessed with motherhood. *Mother Without Child* takes us to the next stage in this fascinated and fascinating exploration. Through illuminating readings of contemporary stories of thwarted motherhood, Hansen challenges the persistent and constraining definitions of the good and even the good-enough mother. She enjoins us to listen to the moving, devastating, and often inspiring stories of mothers who survive the loss of their children and she urges us to find there not the angry voices of feminist daughters who cannot forgive their patriarchal mothers, but alternative stories of a different maternity that can lead us to alternative plots and visions of women's lives. We need this book."--Marianne Hirsch, author of *The Mother/Daughter Plot: Narrative, Psychoanalysis, Feminism* "A careful, committed, and freshly clarifying voice. Hansen's graceful prose and finely interwoven explorations are much needed at this time. Through readings of contemporary fiction, she enriches our vocabulary for discussing the overdetermined topic of motherhood and deepens our understanding of both its psychological and contemporary political dimensions. *Mother Without Child* is a book for historians and social scientists as well as literary scholars."--Laura Doyle, author of *Bordering on the Body: The Racial Matrix of Modern Fiction and Culture*

**Child Survival** Nancy Scheper-Hughes 2012-12-06 of older children, adults, and the family unit as a whole. These moral evaluations are, in turn, influenced by such external contingencies as population demography, social and economic factors, subsistence strategies, household composition, and by cultural ideas

concerning the nature of infancy and childhood, definitions of personhood, and beliefs about the soul and its immortality. MOTHER LOVE AND CHILD DEATH Of all the many factors that endanger the lives of young children, by far the most difficult to examine with any degree of dispassionate objectivity is the quality of parenting. Historians and social scientists, no less than the public at large, are influenced by old cultural myths about childhood innocence and mother love as well as their opposites. The terrible power and significance attributed to maternal behavior (in particular) is a commonsense perception based on the observation that the human infant (specialized as it is for prematurity and prolonged dependency) simply cannot survive for very long without considerable maternal love and care. The infant's life depends, to a very great extent, on the good will of others, but most especially, of course, that of the mother. Consequently, it has been the fate of mothers throughout history to appear in strange and distorted forms. They may appear as larger than life or as invisible; as all-powerful and destructive; or as helpless and angelic. Myths of the maternal instinct compete, historically, with myths of a universal infanticidal impulse.

*Exploring and Celebrating the Early Childhood Practitioner* Carla Solvason  
2022-11-01 This exciting new book celebrates, interrogates and re-imagines the complex and demanding role of the Early Childhood Practitioner. Exploring the many different facets of the Early Childhood Practitioner's (ECP) role, it challenges normative constructions of practitioners and how they have been shaped by assumptions of history, culture and policy. Drawing on a range of theoretical presumptions and debates, the chapters champion the multidimensional power and potentiality of the ECP, arguing for greater respect and recognition for a role that supports and enables at a crucial time in a child's life. With opportunities for reflection, key topics include: The specialist pedagogical expertise of the ECP The key role that ECPs play in the child's holistic wellbeing The ECP as diplomat across many professional contexts, effectively communicating with families and professionals The creative ECP, pushing traditional, normative boundaries of practice The ECP as so much more than they are customarily perceived as being. This latest addition to the TACTYC series will be valuable reading for Early Years students – particularly on Masters level courses – as well as those working and researching in the Early Years sector.

**Child Sexual Abuse Reported by Adult Survivors** Sinéad Ring 2022-04-29 Child Sexual Abuse Reported by Adult Survivors is a wide-ranging and timely critical history and analysis of legal responses to 'historical' or 'non-recent' child sexual abuse (NRCSA) in England and Wales, Ireland and Australia, each of which represents an evolving and progressive approach to this important and complex issue. The book examines the emergence of NRCSA as a distinctive social, political and legal phenomenon in each country and explores the legal responses developed to address its unprecedented challenges. Courts and parliaments in each country have reformed existing doctrine and practice and have created new ways of holding state and private actors accountable and new ways of addressing survivors' injuries. Criminal law, tort law, public inquiries and state reparations have all been to the forefront of these new legal responses, which have transformed law's engagement with NRCSA survivors and understandings of justice itself. However, despite this undeniable progress, the book identifies ways in which the legal responses developed in each country fail to deliver accountability and recognition to NRCSA survivors and argues that such failures betray the law's inherent ambivalence to delivering justice for these survivors. Creating new insights into legal responses to this complex contemporary legal, social and political problem, this book will be of great interest to academic lawyers, political scientists and historians, as well as those working on related topics in criminology, sociology, social policy, cultural studies and gender studies.

**Understanding Children's Experiences of Parental Bereavement** John Holland 2001-08-15 Children experience death differently from adults and therefore need different kinds of help when they are bereaved. Understanding Children's Experiences of Parental Bereavement is a highly practical book for teachers and parents that explains how best to help and support a child whose parent or carer has died. The guidelines are based on the author's experience of work with child bereavement or loss, especially in schools, and of his research in this area. Project Iceberg involved adults who had been through the experience of bereavement while at school and looked retrospectively at the usefulness or otherwise of adult interventions at the time. The book includes discussion of such topics as funerals and the significance of rituals, as well as the importance of a careful transition back to school and of effective communication. As well as offering valuable insight into the impact of death on children, the author provides practical guidelines for how teachers and parents can better support children through the first stages of parental bereavement while they are at school.

of penury, wickedness and death have dominated portrayals of African childhood. The hegemonic lens of the West has failed to take into account the intricacies of not only what it means to be an African child in local and culturally specific contexts, but also African childhood in general. Challenging colonial discourses, this edited volume guides the reader through different comprehensions and perspectives of childhood in Africa. Using a blend of theory, empiricism and history, the contributors to this volume offer studies from a range of fields including African literature, Afro-centric psychology and sociology. Importantly, in its eclectic geographical coverage of Africa, this book unashamedly presents the good, the bad and the ugly of African childhood. The resilience, creativity, pains and triumphs of African childhood are skilfully woven together to present the myriad of lived experiences and aspirations of children from across Africa. As an important contribution to African childhood studies, this book has the potential to be used by policymakers to shape, sustain or change socio-cultural, economic and education systems that accommodate African childhood dynamics and experiences at different levels.

**Abortion and the Moral Significance of Merely Possible Persons** Melinda A. Roberts 2010-08-09 1.1 Goals 1.1.1 I have two main goals in this book. The first is to give an account of the moral significance of merely possible persons – persons who, relative to a particular circumstance, or possible future or world, could but in fact never do exist. I call that account Variabilism. My second goal is to use Variabilism to begin to address the problem of abortion. 1.1.2 We ought to do the best we can for people. And we consider this obligation to extend to people who are, relative to a world, existing or future. But does it extend to merely possible people as well? And, if it does, then does it extend to making things better for them by way of bringing them into existence? If we say that surely it doesn't, does that then mean that our obligation to do the best we can for people does not, after all, extend to the merely possible – that the merely possible do not matter morally? But if the merely possible do not matter morally, then doesn't that mean that it would be permissible for us to bring them into miserable existences – and even obligatory to do just that – in the case where bringing the merely possible into miserable existences creates additional wellbeing for existing persons? References to merely possible persons and, later on, to persons who do exist – existing persons

*Children's Understandings of Well-being* Tobia Fattore 2016-07-14 The book presented here describes an outstanding attempt, not only to include children's views but to partner with children to develop the concept of well-being and to

study the phenomenon as the children understand it. The authors do this by placing the concept of children's well-being within the existing discourses on the topic and by developing their unique theoretical approach to the concept. Then, and based on what children told them, the authors identify different domains and dimensions of children's well-being and touch upon its multifaceted nature. The book concludes with drawing research and policy implications from an integrated summary of the study's findings and lists indicator concepts that present an alternative framework and conceptualisation of well-being from a child standpoint.
