Postoperative Critical Care for Cardiac Surgical Patients Ali Dabbagh
2013-11-29 Cardiac surgical procedures are among the most common and most complicated forms of surgery worldwide and the postoperative period is characterized by complex challenges. Among the factors determining ultimate clinical outcome, postoperative critical care is of major importance. This book adopts a clinical approach in explaining and analyzing the course of clinical care in patients undergoing cardiac surgery. Since the postoperative clinical status is directly influenced by preoperative and intraoperative factors, the early chapters briefly examine preoperative issues and the intraoperative course of cardiac surgery, with particular attention to anesthesia and the process of cardiopulmonary bypass. Subsequent chapters primarily address the critical care of patients by means of an organ-oriented approach, which will enable the reader to use the text as a "cookbook" of cardiac intensive care. This book is intended for use in daily practice by cardiac surgeons, cardiac anesthesiologists, intensivists and cardiac intensive care nurses.

Komodo Dragons James B. Murphy 2015-03-31 More than twenty years have passed since Walter Auffenberg's monumental *The Behavioral Ecology of the Komodo Monitor*. In the intervening years the populations of Komodo dragons—native only to a handful of islands in southeast Indonesia—have dwindled, sparking intensive conservation efforts. During the last two decades new information about these formidable predators has emerged, and the most important findings are clearly presented here. A memoir from Walter Auffenberg and his son Kurt is followed by the latest information on Komodo dragon biology, ecology, population distribution, and behavior. The second part of the book is dedicated to step-by-step management and conservation techniques, both for wild and captive dragons. This successful model is a useful template for the conservation of other endangered species as well, for, as Kurt and Walter Auffenberg note, “The species may well indeed survive in the wild for generations to come while countless other organisms are lost.”

Frontinus: De Aquaeductu Urbis Romae Frontinus 2004-04-15 In 97 CE Julius Frontinus was appointed by the Emperor Nerva to the post of water commissioner for the city of Rome. In the *De Aqueductu Urbis Romae* he sets forth his duties, responsibilities and accomplishments during his first year in office. He sketches the history of the aqueducts, furnishes a wealth of technical data and quotes verbatim from legal documents. This edition is the first since 1922 to be based on the single authoritative witness discovered at Monte Cassino in 1429 and is also the first to take into account the idiosyncrasies of its twelfth-century scribe, Peter the Deacon, a man notorious for literary affectations of his own. R. H. Rodgers provides the first full commentary since the early eighteenth century, dividing his attention between text and language on the one hand and content and interpretation on the other.

Your Dreams Can Save Your Life Anna Mancini 2013-12-14 Although we naturally sense all the dangers of our environment through our body and subconscious, we no longer know how to use these perceptions in order to ensure our own safety. Animals are still able to do this and this enables them to be warned and to flee before the outbreak of natural disasters. However, by learning to benefit from their dreams, humans can surpass animals in this field. The fruit of more than 20 years of research, this book explains a method that is accessible to everyone, that enables the links between the body, conscious and subconscious to be re-established, in order to receive more information on the dangers of our environment. Once communication has been re-established between the body and the subconscious, it turns out that human beings are far superior to animals and to all existing technologies in sensing all kinds of dangers, whether they be natural, human or technological. By using the technique that is explained in this book, you will learn how to 'retrieve' information available to you in dreams, that is important for the safety of you and the people close to you. Through this you will also be able to, for example: - avoid accidental death by escaping before the outbreak of a natural disaster: earthquake, volcanic eruption, landslide, flood, storm, tidal wave, avalanche, tornado, etc. ; - foil the plans of attackers, terrorists, thieves, rapists or burglars; - know, before going away, for example by boat or plane, if you are going to arrive safe and sound at your destination or if it would be better to cancel this trip because of an attack, shipwreck, accident or natural disaster... ; - sense many other traps and dangers and avoid them. - the most gifted among you will also be able to develop a greater sensitivity and intuition directly in a waking state, which will enable you to react even more effectively to the dangers of your environment. - you will also learn not to become anxious for no reason when you have simple nightmares, because you will have learnt to detect what triggers them in you and you will thereby know how to distinguish them from true warning dreams of natural disasters, attacks, burglaries, accidents at nuclear power stations, etc.
