The Handbook of Veterinary Care and Management of the Military Working Dog - Including Anesthesia / Pain Management Standards 2017-10-17 PREFACE Since 9/11 the veterinary care of Military Working Dogs (MWDs) has assumed a greater importance. The role of the working dog has never been more visible and more appreciated. At this writing there are a large number of MWDs deployed throughout the world in support of the Global War on Terrorism. Many people both in and out of uniform are coming to realize that MWDs are among the most valuable and cost-effective counterterrorism tools we have. Before 9/11 detector dogs and their skills were largely taken for granted, even downplayed. Comments like: "MWDs are low-tech"; and "Dogs will be replaced by sensors, imaging techniques and computers" were not uncommon. Detector dogs have become a very visible front-line protective measure against bomb threats – check out the headlines on suicide bombers to see what our terrorist enemies are up to. Then check out the film clips that show security forces in action – the dogs are everywhere! These are reminders that no other tool in the arsenal can match the efficiency, mobility, adaptability and field readiness of a working dog. So, what's new – why publish a new edition now? Yes 9/11 did change things – this edition now has guidelines for MWDs exposed to Anthrax. This third edition of the Handbook also contains new information about the prophylactic laparoscopic-assisted gastropexy program that aims to protect our most "at-risk" dogs from GDV. We also provide guidelines on transitioning from once daily feeding to feeding two "meals" a day; the Dog Center now feeds over 500 MWDs twice a day. Additionally we have updated information about MWD Adoption – a program that has come of age in the 2 years since the publication of the second edition. Also in an effort to provide a "one-stop" resource for working dog policy, this edition now incorporates topics that were formerly available only as VETCOM policy letters. These and other revisions make this new MWD Handbook one of the most up to date resources for military veterinarians caring for MWD's and other Federal Agency working dogs. All veterinary personnel involved in anesthesia should familiarize themselves with these standards, as some previously used agents (such as butorphanol / acepromazine /

glycopyrrolate combination, tiletamine / zolazepam, and xylazine) have been removed from the guidance. The world will continue to change and our veterinary care will also change as our knowledge, new technology, and improved therapeutics become available. Our commitment to the health care of MWDs is a constant. Keep up the good work!

Manuals Combined: Military Working Dog Handler Medical and Doctrine

Presentations And Manuals Over 3,200 total slides and pages ... INTRODUCTION: Dogs have served in active service at the sides of their handlers for decades. They have been heroes, showing bravery under fire, saving lives (often losing their own), and bringing comfort to the injured and infirmed. The first recorded American use of military dogs was during the Seminole War of 1835 and again in 1842. In Florida and Louisiana, the Army used Cuban bred bloodhounds for tracking. During the US Civil War, dogs were used as messengers, guards, and unit mascots. The Army Quartermaster Corps began the US Armed Forces' first war dog training during World War II. By 1945, they had trained almost 10,000 war dogs for the Army, Navy, Marine Corps, and Coast Guard. Fifteen war dog platoons served overseas in World War II. Seven platoons saw service in Europe

and eight in the Pacific. MWDs were trained at Fort Carson, Colorado, organized into scout dog platoons, and used in the Korean conflict for sentry duty and support of combat patrols. In 1957, MWD training moved to Lackland Air Force base (LAFB), Texas, with the Air Force managing the program. Throughout the Vietnam Conflict, the Military Police Corps used dogs with considerable success. Most of these were sentry dogs used to safeguard critical installations such as ports and airfields. A new dimension in canine utilization was realized when marijuana detector dog teams were trained and deployed to assist military police in suppressing illicit drug traffic. Sentry and marijuana detector dog teams were then deployed worldwide in support of military police. An important outgrowth of the conflict was the development of canine research and development efforts. These ongoing efforts were able to initiate the first steps toward developing a more intelligent and stronger military dog, training dogs to detect specific drugs and explosives, developing multiple-purpose dogs, and employing tactical dogs by electronic remote control. In the 1990s and early 2000s, MWDs were deployed around the globe in military operations such as Just Cause, Desert Shield and Desert Storm, Uphold Democracy, and Enduring Freedom and Iraqi Freedom. These teams were effectively utilized to enhance the security of critical facilities and areas, as well as bolster force protection and antiterrorism missions, allowing commanders to use military police
