Memory Rose into Threshold Speech Paul Celan 2020-11-24 Memory Rose into Threshold Speech gathers the poet Paul Celan's first four books, written between 1952 and 1963, which established his reputation as the major post-World War II German-language poet. Celan, a Bukovinian Jew who lived through the Holocaust, created work that displays both great lyric power and an uncanny ability to pinpoint totalitarian cultural and political tendencies. His quest, however, is not only reflective: there is in Celan's writing a profound need and desire to create a new, inhabitable world and a new language for it. In Memory Rose into Threshold Speech, Celan's reader witnesses his poetry, which starts lush with surrealistic imagery, become gradually pared down;

its syntax tightens and his trademark neologisms and word formations increase toward a polysemic language of great accuracy that tries, in the poet's own words, "to measure the area of the given and the possible."

Translated by the prize-winning poet and translator Pierre Joris, this bilingual edition follows the 2014 publication of *Breathturn into Timestead*, Celan's collected later poetry. All nine volumes of Celan's poetry are now available in Joris's carefully crafted translations, accompanied here by a new introduction and extensive commentary. The four volumes in this edition show the flowering of one of the major literary figures of the last century. This volume collects Celan's first four books: *Mohn und Gedächtnis* (Poppy and Memory), *Von Schwelle zu Schwelle* (Threshold to Threshold), *Sprachgitter* (Speechgrille), and *Die Niemandrose* (NoOnesRose).

Medicinal Plants Dr. Angela Fetzner 2019-07-07 What Will I Find in This Book? Herbal medicine - the oldest form of treatment in the world Natural remedies, especially medicinal plants, have long been the only remedy for doctors and pharmacists. Medicinal plants also served as important raw materials for the production of medicines. Determine, collect and dry medicinal plants Medicinal plants can be found almost everywhere in nature - on meadows, in the forest, on the wayside. This book explains how to collect medicinal plants and determine which plant parts to use, whether it's the flowers, leaves, fruits, roots or bark. Herbal preparations - medicinal plants can be used in a variety of ways The simplest usage form of medicinal herbs is tea. However, there is a far greater range of uses of medicinal plants. Known medicinal herb preparations include e.g. tinctures, ointments, creams; they can also be used in baths. The book provides an overview of the preparation and use of the individual dosage forms.

Insights from Book Translations on the International Diffusion of Knowledge 2011 Increases in the stock of ideas possessed by societies are central to modern economic growth. The implications of idea flows are striking: Klenow and Rodriguez-Clare (2005) estimate world production would be just 6% of its current level if countries did not share ideas. Yet, although theoretical economists have studied ideas and their diffusion extensively, empirical studies are scarce because ideas are inherently difficult to measure. Previous empirical studies of idea flows have tended to use proxies such as trade flows, foreign direct investment, migration, and patent citations. However, with the exception of the latter, these measures are not pure idea flows, and do not capture the key properties of ideas, namely non-rivalry and disembodiedness. My research proposes a novel measure of idea flows, namely book translations, and uses it to study the factors that affect the international diffusion of ideas. Book translations are an attractive way to quantify idea flows because they are both non-rival and disembodied; they are a pure measure of idea flows rather than a by-product of a process such as trade or migration, and their key purpose is to make the ideas contained in the book accessible to speakers of another language. In chapter 2, I outline the economics literature on ideas and their diffusion. I motivate and discuss book translations as a measure of idea flows, and provide a framework for thinking about when translations are likely to occur. I describe the translation data in chapter 3. The source of the data is an international bibliography of translations collected by the United Nations Educational, Scientific, and Cultural Organization. From this bibliography, I compile a data set of over 2 million translations published in 80 countries since the 1949, including detailed information on each title translated. I then document the main patterns of translation flows. In chapter 4, I employ a gravity framework to study how distance affects translation flows between countries. This sheds light both on the barriers to international idea diffusion and on the underlying causes of the negative relationship between distance and trade. Translations differ from trade in that they have zero

transportation costs, but they are subject to similar search and information costs and costs of forming contracts. I estimate a gravity model where bilateral translation flows vary with the sizes of the countries and the distance between them, and find the elasticity of translations with respect to distance to be between -0.3 and -0.5 for the 1990s; these values are significantly smaller than the equivalent elasticity for trade found in the literature, suggesting a significant role for transportation costs in the distance effect on trade. In addition, I present several pieces of evidence that suggest supply-side frictions play a larger role in the distance effect on translations than do consumer preferences. For instance, the speed with which titles are translated, which is likely to largely capture supply frictions as opposed to demand factors, decreases significantly with distance. Finally, in joint work with Ran Abramitzky (chapter 5), I study how the collapse of the Communist regime in Eastern Europe at the close of the 1980s affected the international diffusion of ideas. We show that while translations between Communist languages decreased by two thirds with the collapse, Western-to-Communist translations increased by a factor of seven and reached Western levels. Convergence was full in economically-beneficial fields such as sciences and only partial in culturally-beneficial fields such as history. The effects were larger for more Western-oriented countries. These findings help us understand how institutions shape the international diffusion of knowledge and demonstrate the importance of preferences in determining the type of ideas that diffuse into a country.
