Charles Darwin's 'The Life of Erasmus Darwin' Charles Darwin 2003 Charles Darwin s book about his grandfather, The Life of Erasmus Darwin, is curiously fascinating. Before publication in 1879, it was shortened by 16%, with several of the cuts directed at its most

provocative parts. The cutter, with Charles's permission, was his daughter Henrietta - an example of the strong hidden hand of meek-seeming Victorian women. This first unabridged edition, edited by Desmond King-Hele, includes all that Charles originally intended, the cuts being restored and printed in italics. Erasmus Darwin was one of the leading intellectuals of the eighteenth century. He was a respected physician, a well-known poet, a keen mechanical inventor, and a founding member of the influential Lunar Society. He also possessed an amazing insight into the many branches of physical and biological science. Most notably, he adopted what we now call biological evolution as his theory of life, 65 years prior to Charles Darwin's *Origin of Species*.

Who Was Charles Darwin? Deborah Hopkinson 2005-05-19 As a young boy, Charles Darwin hated school and was often scolded for conducting "useless" experiments. Yet his passion for the natural world was so strong that he suffered through terrible seasickness during his five-year voyage aboard *The Beagle*. Darwin collected new creatures from the coasts of Africa, South America, and the Galapagos Islands, and expanded his groundbreaking ideas that would change people's understanding of the natural world. About 100 illustrations and a clear, exciting text will make Darwin and his theory of evolution an exciting discovery for every young reader.

The Correspondence of Charles Darwin: Volume 7, 1858-1859 Charles Darwin 1985 Covers the momentous period up to and immediately following publication of *On The Origin of Species*.

The Autobiography of Charles Darwin (Dodo Press) Charles Darwin 2007-08 Charles Robert Darwin (1809-1882) was an English naturalist who achieved lasting fame by producing considerable evidence that species originated through evolutionary change, at the same time proposing the scientific theory that natural selection is the mechanism by which such change occurs. This theory is now considered a cornerstone of biology, and has significantly affected other disciplines such as philosophy, psychology and anthropology.

The Origin of Species and The Voyage of the 'Beagle' Charles Darwin 2003-10-14 Easily the most influential book published in the nineteenth century, Darwin's *The Origin of Species* is also that most unusual phenomenon, an altogether readable discussion of a scientific subject. On its appearance in 1859 it was immediately recognized by enthusiasts and detractors alike as a work of the greatest importance: its revolutionary theory of evolution by means of natural selection provoked a furious reaction that continues to this day. *The Origin of Species* is here published together with Darwin's earlier *Voyage of the 'Beagle.'* This 1839 account of the journeys to South America and the Pacific islands that first put Darwin on the track of his remarkable theories derives an added charm from his vivid description of his travels in exotic places and his eye for the piquant detail.

Charles Darwin's Natural Selection Charles Darwin 1987-11-26 An original, unpublished manuscript written before the *Origin of Species* which contains the references to journal articles and books that Darwin used in formulating his controversial ideas. This volume has been edited and annotated and includes a cross-indexing to the *Origin*.

[Charles Darwin's Beagle Diary \(1831-1836\)](#) Charles Darwin 2009-03-01 The *Beagle Diary* was used to write Darwin's famous book '*Voyage of the Beagle*' (1839). The narrative of the

surveying voyages of His Majesty's Ships Adventure and Beagle between the years 1826 and 1836. Darwin describes each day of the voyage, some in intimate detail, during the Beagle's circumnavigation of the globe.

The Autobiography of Charles Darwin Charles Darwin 2009-06-01 Charles Darwin is the English naturalist whose work laid the foundation for evolutionary biology and theory. Darwin wrote his autobiography under the title *Recollections of the Development of my Mind and Character* in 1876. He wrote it for his family, but his son edited and published the autobiography five years after Darwin's death in 1882, removing some of the critical passages about God and Christianity.

Mrs. Charles Darwin's Recipe Book Dusha Bateson 2008 Delineates a lifestyle at the top of English society and intelligentsia. This cookbook includes unlikely dishes such as Turnips Cresselly and Penally Pudding. It also features the recipe for boiling rice in Charles Darwin's own hand.

The Life and Letters of Charles Darwin: Volume 1 Charles Darwin 2009-07-20 This book, the first of three-volumes detailing the life of Charles Darwin, published five years after his death, was edited by his son Francis, who was his father's collaborator in experiments in botany and who after his death took on the responsibility of overseeing the publication of his remaining manuscript works and letters. In the preface to the first volume, Francis Darwin explains his editorial principles: 'In choosing letters for publication I have been largely guided by the wish to illustrate my father's personal character. But his life was so essentially one of work, that a history of the man could not be written without following closely the career of the author.' Among the family history, anecdotes and reminiscences of scientific colleagues is a short autobiographical essay which Charles Darwin wrote for his children and grandchildren, rather than for publication. This account of Darwin the man has never been bettered.

The Correspondence of Charles Darwin: Charles Darwin 2017-10-12 This volume is part of the definitive edition of letters written by and to Charles Darwin, the most celebrated naturalist of the nineteenth century. Notes and appendixes put these fascinating and wide-ranging letters in context, making the letters accessible to both scholars and general readers. Darwin depended on correspondence to collect data from all over the world, and to discuss his emerging ideas with scientific colleagues, many of whom he never met in person. The letters are published chronologically: volume 25 includes letters from 1877, the year in which Darwin published *Forms of Flowers* and with his son Francis carried out experiments on plant movement and bloom on plants. Darwin was awarded an honorary LL.D. by Cambridge University, and appeared in person to receive it. The volume contains a number of appendixes, including two on the albums of photograph sent to Darwin by his Dutch, German, and Austrian admirers.

Autobiographies Charles Darwin 2002-09-24 A glimpse into the mind of one of the world's intellectual giants *The Autobiographies of Charles Darwin (1809-82)* provide a fascinating glimpse into the mind and experiences of one of the world's intellectual giants. They begin with engaging memories of his childhood and youth and of his burgeoning scientific curiosity and love of the natural world, which led to him joining the expedition on the *Beagle*. Darwin follows this with survey of his career and ends with a reckoning of his life's work. Interspersed with these recollections are fascinating portraits - from his devoted wife Emma and his talented father, both bullying and kind, to the leading figures of the Victorian scientific world he counted among his friends, including Lyell and Huxley. Honest and illuminating, these memoirs reveal a man who was isolated by his controversial beliefs and whose towering achievements were attained by a life-long passion for the discoveries of

science. For more than seventy years, Penguin has been the leading publisher of classic literature in the English-speaking world. Charles Darwin and Other English Thinkers S. Parkes Cadman 2015-06-11 Excerpt from Charles Darwin and Other English Thinkers: With Reference to Their Religious and Ethical Value These lectures were delivered under the auspices of The Brooklyn Institute of Arts and Sciences during the months of November and December, 1910. At the kindly suggestion of Professor Franklin W. Hooper, the Secretary of the Institute, they have been prepared for the press. While they remain substantially as they were given, they have been revised with the view of rendering them more serviceable to ministers and laymen alike. I shall feel abundantly rewarded if the volume stimulates the reader to further research concerning the men and the subjects with which it deals. It has not been an easy task faithfully to convey the exact meanings and points of difference in the close reasoning of these scientific and philosophical writers; hence I have thought it wise to allow them to speak for themselves whenever possible. It will probably be said that many facts of prime importance have been omitted, and some others misinterpreted. This is more than likely; and if so, I must be held wholly responsible for it. But I sincerely hope that I have been able to give a little direction in that path which leads to a more complete apprehension of the Truth. The Voyage of the Beagle Charles Darwin 2010 This richly readable book is the product of Charles Darwin's amazing journey aboard the *Beagle* where he made observations that led to his revolutionary theory of natural selection.

Charles Darwin's Letters Charles Darwin 1998-09-17 Charles Darwin stands as an icon in the history of science; a man who completely changed the direction of modern thought by establishing the basis of evolutionary biology. These letters offer a fascinating window onto the scientific observations, personal concerns and friendships of a great thinker, affording a unique glimpse of Darwin as both naturalist and family man. From his early years at Edinburgh University up to the publication of *The Origin of Species* in 1859, the letters in this volume chart the most exciting years of Darwin's life.

Charles Darwin's the Origin of Species David Amigoni 1995-05-15 This volume marks a new approach to a seminal work of the new modern scientific imagination. Darwin's central theory of natural selection neither originated nor could be contained within the natural sciences, but continues to shape and challenge our most basic assumptions about human social and political life. Seven readings, crossing the fields of history, literature, sociology, anthropology and the history of science, demonstrate the complex position of the text within the cultural debates past and present.

Charles Darwin's Beagle Diary Charles Darwin 2001-05-24 On 27th December 1831, HMS *Beagle* set out from Plymouth under the command of Captain Robert Fitzroy on a voyage that lasted nearly 5 years. The purpose of the trip was to complete a survey of the southern coasts

of South America, and afterwards to circumnavigate the globe. The ship's geologist and naturalist was Charles Darwin. Darwin kept a diary throughout the voyage in which he recorded his daily activities, not only on board the ship but also during the several long journeys that he made on horseback in Patagonia and Chile. His entries tell the story of one of the most important scientific journeys ever made with matchless immediacy and vivid descriptiveness.

The Voyage of the Beagle Charles Darwin 2008-12-01 English scientist, naturalist, and geologist CHARLES DARWIN (1809-1882) transformed our understanding of the planet and our place on it with his theory of evolution through natural selection. Much of the basis for his conceptual breakthrough was his research during the five-year journey he undertook on the HMS Beagle, an English exploratory vessel, which sailed South America and the South Pacific from 1831 to 1836. First published in 1839 under the title Journal and Remarks, this replica volume reproduces the 1845 second edition, originally called Journal of Researches. Enthralling both as a tale of travel adventure and as a naturalist's diary, The Voyage of the Beagle is even more fascinating for the hints it offers, from decades prior to Darwin's publication of 1859's On the Origin of Species, of the observations of the natural world and the thought processes that followed that would combine to revolutionize the field of biology.

The Correspondence of Charles Darwin: Volume 2, 1837-1843 Charles Darwin 1985 A collection of the letters of Charles Darwin portrays his personal life and the development of his scientific theories

The Autobiography of Charles Darwin Charles Darwin 2010-11-02 First published in 1892, this autobiography of the great naturalist, compiled and edited by his son Francis, offers fascinating glimpses into the mind and personal experiences of the man whose discoveries have had such a profound influence on science, philosophy, and the modern world view. In the first half of the book Darwin reminisces about his early life, his family and upbringing, and his five-year voyage on the HMS Beagle, during which he made the many observations that were later to prove so critical to his formulation of evolutionary theory. The second half is devoted mainly to the Origin of Species: its foundations, development, the writing and publication process, its varied critical reception, and the gradual acceptance and growth of evolutionary theory. Also included are thoughts on his lesser-known work in geology and the fertilization of flowers, plus a selection of his letters. This autobiography is an intriguing behind-the-scenes look into the personal life of a great scientist and the development of one of the most powerful ideas of the modern era.
