Familiar Messes Gratiagusti Chananya Rompas 2017-12-18 "I found solace in nothing. Because everything was temporary. And days flew by like heavy cigarette smoke floating above the dancing heads in the city's most notorious club, like speech bubbles written in a language you cannot understand, like a dragon's breath you keep chasing, like pills that move from your hand to your red lips." Gratiagusti Chananya Rompas' personal essays are troves of memories she can always turn back to. They started off as day-to-day accounts of events from her younger years and the now. But Anya, as she is often called, is obsessed with how things people do — often in haste — quickly fossilize into memories, and how these memories, in turn, shape their lives.

Quartz Crystal Oscillator Circuits Design Handbook D. Firth 1965 The object of this handbook is to assemble a set of design methods for crystal oscillators in the frequency range of 1 KC to 200 MC with the aim of facilitating design, eliminating crystal unit misapplications, and reducing design costs. The handbook is not directed at the design of ultra-stable crystal oscillators, but rather at the non-temperature controlled, medium frequency stability oscillator commonly in use in many types of communications equipment. The handbook contains discussions of: (1) The electrical characteristics of crystal units, condition of usage, and methods of measurement. (2) Characteristics of tube and transistor amplifiers. (3) Characteristics of impedance transforming networks. (4) Detailed design information on series resonance and anti-resonance oscillators. (5) Design examples together with experimental evaluation data covering most of the 1 KC to 200 MC range. (Author).

Halal Development: Trends, Opportunities and Challenges Heri Pratikto 2021-07-22 The increasing demand for halal products, including goods and services, every year, especially for food and beverages, has resulted in a growing need for products with halal guarantees. Along with the increasing trend of the global demand, it has resulted in an increase in producers of halal food and beverages in both Muslim and non-Muslim countries. In addition

the demand for halal tourism is also increasing. Indonesia is one of the largest Muslim countries in the world. However, there are still many Muslim consumer actors and Muslim producer actors who do not yet have an awareness of the importance of complying with the provisions of Islamic law in consuming and producing goods and services. There are still many restaurants and hotels that serve food and drinks that are not certified halal. There are still many food, medicinal and cosmetic products that are not halal certified. But now many secular countries such as France, Canada, Australia, the United States, Britain are also halal certified with the aim of meeting the Muslim demand for halal products for food and beverage, including for halal tourism. Starting from the development of the halal industry both in the fields of food, beverages and services, an International Seminar was held, which provides a more complete understanding of halal products, current halal developments and can serve as motivation to produce halal products, providing research results from the topic of halal development. The international seminar, entitled International Conference on Halal Development, listed speakers from several countries able to provide an overview of the halal development of several countries. This book contains a selection of papers from the conference.

Renewable Energy Organisation for Economic Co-operation and Development 2004 Renewable Energy - Market and Policy Trends in IEA Countries reviews the experience of IEA countries after the oil crisis in the 1970s initiated a surge of investments in renewables research and development. While use of renewables has grown rapidly, they still account for only a small portion of the IEA energy mix. Hydropower, bioenergy and geothermal energy are mature technologies that contribute about 5 - 6% to primary energy supply. Solar, wind, and other new renewables have experienced rapid technology development, but as yet they represent only a small share.This work examines policies and measures that have

been introduced in IEA countries to increase the cost effective deployment of renewables, reviews the objectives behind these policies, and evaluates the results. The aim is to identify best practices in order to assist governments in making future policy decisions.

Internal Combustion Engines Institution of Mechanical Engineers 2014-10-10 This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

The Ghost of the Executed Engineer Loren Graham 1996-02-01 Stalin ordered his execution, but here Peter Palchinsky has the last word. As if rising from an uneasy grave, Palchinsky's ghost leads us through the miasma of Soviet technology and industry, pointing out the mistakes he condemned in his time, the corruption and collapse he predicted, the ultimate price paid for silencing those who were not afraid to speak out. The story of this visionary engineer's life and work, as Loren Graham relates it, is also the story of the Soviet Union's industrial promise and failure. We meet Palchinsky in pre-Revolutionary Russia, immersed in protests against the miserable lot of laborers in the tsarist state, protests destined to echo ironically during the Soviet worker's paradise. Exiled from the country, pardoned and welcomed back at the outbreak of World War I, the engineer joined the ranks of the Revolutionary government, only to find it no more open to criticism than the previous regime. His turbulent career offers us a window on debates over industrialization. Graham highlights the harsh irrationalities built into the Soviet system—the world's most inefficient steel mill in Magnitogorsk, the gigantic and ill-conceived hydroelectric plant on the Dnieper River, the infamously cruel and mislocated construction of the White Sea Canal. Time and again, we see the effects of policies that ignore not only the workers' and consumers' needs but also sound management and engineering precepts. And we see Palchinsky's criticism and advice, persistently given, consistently ignored, continue to haunt the Soviet Union right up to its dissolution in 1991. The story of a man whose gifts and character set him in the path of history, The Ghost of the Executed Engineer is also a cautionary tale about the fate of an engineering that disregards social and human issues.
