Did You See That?: A GPS Guide To North Carolina's Out Of The Ordinary Attractions Joe Sledge
2021-03-02 Throughout North Carolina there are strange and wonderful attractions either just off the road or off the beaten path. Did You See That? is a guide to these pieces of roadside oddity, complete with their latitude and longitude. Merely type in the numbers in your car or smartphone and follow the directions to your favorite attraction. Chapters in Did You See That? include a possible location for pirate treasure, a hidden monument for the Wright Brothers, an abandoned UFO, a giant frying pan, two dinosaurs, two western towns, two sundials, a big snowball stand, a hidden racetrack, a giant strawberry, a huge silver spinning head, a man-made geyser, an underwater town, and a giant bear that only comes

out twice a year. And that's only a small part of the book. The book is divided into three sections, Coastal, Central, and Mountains. Over 80 different locations are listed inside, with a detailed description and history of each bit of roadside oddity. In addition, a rating guide is included on the location's oddity and difficulty in accessing the spot. In this revised Second Edition all the original chapters remain, with notes on some subjects that have moved or disappeared over time. The lost attractions are preserved in this book, even if they are gone in the real world. Whether you are a native to the Old North State, have relocated there, or just like to visit, this book is for you. *Did You See That?* will help you find new places and make road trips a little more interesting. There is a mixture of the old and new, historical and strange, ridiculous and charming, which means there's enough for everyone to find something interesting in this book. So make your travels more fun with *Did You See That?*

Crime in Progress Glenn Simpson 2019-11-26 #1 NEW YORK TIMES BESTSELLER • “I’ve read kind of all the books on this subject . . . and this is the one you want to read.”—Rachel Maddow *Before Ukraine, before impeachment: This is the never-before-told inside story of the high-stakes, four-year-long investigation into Donald Trump’s Russia ties—culminating in the Steele dossier, and sparking the Mueller report—from the founders of political opposition research company Fusion GPS. Fusion GPS was founded in 2010 by Glenn Simpson and Peter Fritsch, two former reporters at The Wall Street Journal who decided to abandon the struggling news business and use their reporting skills to conduct open-source investigations for businesses and law firms—and opposition research for political candidates. In the fall of 2015, they were hired to look into the finances of Donald Trump. What began as a march through a mind-boggling trove of lawsuits, bankruptcies, and sketchy overseas projects soon took a darker turn: The deeper Fusion dug, the more it began to notice names that Simpson and Fritsch had come across during their days covering Russian corruption—and the clearer it became that the focus of Fusion’s research going forward would be Trump’s entanglements with Russia. To help them make sense of what they were seeing, Simpson and Fritsch engaged the services of a former British intelligence agent and Russia expert named Christopher Steele. He would produce a series of memos—which collectively became known as the Steele dossier—that raised deeply alarming questions about the nature of Trump’s ties to a hostile foreign power. Those memos made their way to U.S. intelligence agencies, and then to President Barack Obama and President-elect Trump. On January 10, 2017, the Steele dossier broke into public view, and the*

Trump-Russia story reached escape velocity. At the time, Fusion GPS was just a ten-person consulting firm tucked away above a Starbucks near Dupont Circle, but it would soon be thrust into the center of the biggest news story on the planet—a story that would lead to accusations of witch hunts, a relentless campaign of persecution by congressional Republicans, bizarre conspiracy theories, lawsuits by Russian oligarchs, and the Mueller report. In *Crime in Progress*, Simpson and Fritsch tell their story for the first time—a tale of the high-stakes pursuit of one of the biggest, most important stories of our time—no matter the costs.

Your GPS to Employment Success Beverly A. The Handy Geography Answer Book Paul A Tucci 2016-07-18 Geography is more than just maps and finding your destination. It is about the land, the people on that land, the delicate balance of nature, and our very interdependence upon it, despite the miracles of technology and grocery stores. It's about the effects of nature on places and people, as well as how politics, borders, cities, and towns affect our lives. The Handy Geography Answer Book traces the history of geography from Eratosthenes and Alexander von Humboldt to latitude and longitude, and the latest advances in the Global Positioning System (GPS). It provides insights into economic, social, historic, culture, religious, political, and climate geography, plus oceanography, demographics, and more. Completely revised and updated, it tours the world, its natural features, and the ever-changing mark humans make on our planet, answering 1,200 questions from the trivia (longest, hottest, tallest) to how geography has influenced history, religion, architecture, and the location of cities, including Who first had the idea that there is a magnetic North Pole? What is interesting about Google's "Streetview"? How many people are projected to live on the planet in 2050? Which state has the highest annual divorce rate? What are the largest and smallest counties in the U.S.?

FLYING FOR GPS LEN JACOBSON 2014-05-20 Most books on GPS are quite technical and concentrate on the satellites and/or receiver design. This book is about user equipment evolution from expensive, complex and voluminous military sets to today's low-cost chips buried in our cell phones. It traces a system designed primarily for military and civilian aircraft, ships and land vehicles to an essential utility of everyday life, enabling new businesses, more safety and the ability to track everything that moves. In parallel with the evolution of GPS is the evolution of commercial air travel as experienced by the author, starting from a flight on a Pan Am 707 in 1963 to a recent one on an Air France A380. Part II is a memoir written for the GPS community, people who have met or been influenced or educated about GPS by the author and anyone else interested in this facet of GPS history. It describes the tribulations that accompanied the development GPS user equipment and some of their first applications. What makes the book an autobiography is the inclusion of Part I, which is for the author's friends and family and anyone else interested in his early development.

Going Places with GPS Roger Palmer 2009-06-01 Easy GPS Activities for Clubs, Classroom and Beyond is the first GPS book with fun and exciting lessons and activities that you can do with your GPS. This book eases the beginning user into using a GPS with straight forward, simple exercises and then gradually adds to the level of difficulty. This book is a must for any educator or club advisor who uses or wants to use GPS technologies in their courses. Families will thoroughly enjoy this book too!

Take along this guide on all of your canoeing adventures.

The Geohistorical Approach Silvia Elena Piovan 2020-05-14 This book gives a comprehensive view of the strengths and limits of the interdisciplinary methods that work together to form the geohistorical approach to geographical and geological sciences. The geohistorical approach can be synthetically defined as a multi- and interdisciplinary approach that uses techniques and perspectives, mainly from geography, history, and natural sciences, to examine topics that inform the space-time knowledge of environment, territory, and landscape. The boundary between the application of physical and human science methods is large and hazy. This volume exists at this boundary and offers an approach that utilizes both historical data (from both physical and human records) and GIScience (e.g. GIS, cartography, GPS, remote sensing) to investigate the evolution of the environment, territory and landscape through both space and time. The first objective of this volume is to define the term geohistorical approach. An entire chapter focuses on a review of the main disciplines that connect geography and history, a review of the terms environment, territory, and landscape as objects of study of this approach, and the definition and importance of the geohistorical approach. The second goal is to describe the methods used in the geohistorical approach. Eight chapters present the key methods also using examples of applications from the international context, offering an awareness of the potentials, limitations and accuracy of each method, with particular focus on the integration of methods. The third goal is to provide case studies to demonstrate the use and integration of geohistorical methods from both original material and published research. A final chapter is dedicated to an interdisciplinary case study from the Venetian Plain (Italy), providing an example of the integration of almost all methods described in the book.

Following the Legends Dale R. Bascom 2007 Utah's history is overflowing with legends. for the past 25 years, Dale Bascom has been collecting stories, maps, and documentation about Utah's legends. In *Following the Legends*, he attempts to draw the line between fact and fiction in the quest for treasure and adventure. with the assistance of modern technology, GPS equipment, and mapping software, the search for treasure takes on a whole new meaning. *Following the Legends* combines old rumors with new tools to shed light on Utah's rich history. This compilation of legends, true stories, expert advice, and practical wisdom is ideal for both the curious and the adventurous alike.

A Text Book on GPS Surveying Jayanta Kumar Ghosh, Ph.d. 2015-12-28 The objective of this book is to provide insights into understanding GPS Surveying and positioning concisely in a systematic manner. The book contains six chapters, one annexure followed by bibliography. The first chapter aims at introducing Global Positioning System (GPS) for land surveying. It starts with a brief history of development of NAVSTAR (NAVigational System for Timing And Ranging) GPS followed by advantages of GPS in land surveying and principle of positioning using GPS. The chapter concludes with an overview of elements of GPS in surveying and positioning. The objective of Chapter 2 is to provide basic information about GPS for surveying. It starts with architecture of GPS followed by contents of GPS signal, GPS system time. It discusses the World Geodetic System 1984 (WGS84) explaining its coordinate system, geoid, ellipsoid, earth gravitational model etc followed by its relationships with other geodetic systems. The chapter also discusses on GPS augmentation systems and modernization steps. Chapter 3 aims at providing

fundamental information required for GPS surveying. The chapter explains the different methods for GPS surveying, equipments, field operations and quality analysis of GPS observations. The chapter concludes with accuracy standards to be followed for GPS surveying. Aim of chapter 4 is to explain the content of GPS observations. It discusses the GPS observables and fundamental relations to determine unknown positions. It also provides the different errors associated with observations. The chapter concludes with criterion for assessment of quality of GPS Observables. Chapter 5 discusses processing steps involved in determination of positions from GPS observables. It explains the operations involved in pre-processing and positioning followed by criterion for assessment of GPS positions. The chapter concludes with a brief discussion on salient modules of a GPS data processing software. Chapter 6 aims at locating GPS position geo-spatially through network adjustment. It discusses least square network adjustment models and methods, processing strategies, steps for network adjustments and criterion for output quality. The chapter concludes with a worked out example on network adjustment, as detailed theoretically. The book further contains one annexure stating the steps involved for conversion of navigation data to determine satellite positions in ECEF system. Towards the end, the book contains a list of books which have been referred in writing this book. Manuscript has been thoroughly checked through plagiarism software to avoid any copyright violation. However, to make the book more understandable, standard names and symbols have been used from original literatures. To summarize, the book provides a sequence of topics aiming to basic understanding and carrying out land surveying as well as processing for geo-spatial positioning using GPS. The book is meant to serve as an introductory text book on GPS surveying and is expected to be useful for students as well as field surveyors looking for insights into GPS surveying.

About Time David Rooney 2021-08-17 A captivating, surprising history of timekeeping and how it has shaped our world.

The JGuy's Guide Joseph B. Meszler 2013 What does it mean to be a young Jewish man? Who am I? How do I feel about myself? Do I seem cool? Do I fit in? These overarching teen boys' concerns are addressed head on through the voices of contemporary Jewish teens, men, and biblical and historical stories. The JGuy's Guide helps young teens see how Judaism can help them navigate the often choppy waters of adolescence while it strengthens Jewish identity and pride. This interactive book encourages

personal reflection and discussion, making it ideal for the individual teenager as well as education and discussion groups. Its candid approach explores dilemmas boys face in their daily lives: the pressure to excel at sports, school and social life; the courage to speak up when friends make questionable choices or parents act hypocritically; and more. Like the Talmud, the book offers many perspectives and reflection questions to help boys find their own truths.

ISIS Fawaz A. Gerges 2021-11-02 An authoritative introduction to ISIS—now expanded and revised to bring events up to the present The Islamic State stunned the world with its savagery, destructiveness, and military and recruiting successes. However, its most striking and distinctive characteristic was its capacity to build governing institutions and a theologically grounded national identity. What explains the rise of ISIS and the caliphate, and what does it portend for the future of the Middle East? In this book, one of the world’s leading authorities on political Islam and jihadism sheds new light on these questions. Moving beyond journalistic accounts, Fawaz Gerges provides a clear and compelling explanation of the deeper conditions that fuel ISIS. This new edition brings the story of ISIS to the present, covering key events—from the military defeat of its territorial state to the death of its leader al-Baghdadi—and analyzing how the ongoing Syrian, Iraqi, and Saudi-Iranian conflict could lead to ISIS’s revival.

GPS Declassified Richard D. Easton 2013-10-01 GPS Declassified examines the development of GPS from its secret, Cold War military roots to its emergence as a worldwide consumer industry. Drawing on previously unexplored documents, the authors examine how military rivalries influenced the creation of GPS and shaped public perceptions about its origin. Since the United States’ first program to launch a satellite in the late 1950s, the nation has pursued dual paths into space—one military and secret, the other scientific and public. Among the many commercial spinoffs this approach has produced, GPS arguably boasts the greatest impact on our daily lives. Told by the son of a navy insider—whose work helped lay the foundations for the system—and a science and technology journalist, the story chronicles the research and technological advances required for the development of GPS. The authors peek behind the scenes at pivotal events in GPS history. They note how the technology moved from the laboratory to the battlefield to the dashboard and the smartphone, and they raise the specter of how this technology and its surrounding industry affect public policy. Insights into how the system works and how it fits into a long

history of advances in navigation tie into discussions of the myriad applications for GPS.

Pinpoint: How GPS is Changing Technology, Culture, and Our Minds Greg Milner 2016-05-03 "One of the most mesmerizing and exhilarating, yet alarming modern technology books...an extraordinary tale."

—Gillian Tett, Financial Times Pinpoint tells the fascinating story of a hidden system that touches nearly every aspect of modern life. Tracking the development of GPS from its origins as a bomb guidance system to its present ubiquity, Greg Milner examines the technology's double-edged effect on the way we live, work, and travel. Savvy and original, this sweeping scientific history offers startling insight into how humans understand their place in the world.

"*Why Won't You Just Tell Us the Answer?*" Bruce A. Lesh 2011 Every major measure of students' historical understanding since 1917 has demonstrated that students do not retain, understand, or enjoy their school experiences with history. Bruce Lesh believes that this is due to the way we teach history -- lecture and memorization. Over the last fifteen years, Bruce has refined a method of teaching history that mirrors the process used by historians, where students are taught to ask questions of evidence and develop historical explanations. --from publisher description.

The New World History Ross E. Dunn 2016-08-23 The New World History is a comprehensive volume of essays selected to enrich world history teaching and scholarship in this rapidly expanding field. The forty-four articles in this book take stock of the history, evolving literature, and current trajectories of new world history. These essays, together with the editors' introductions to thematic chapters, encourage educators and students to reflect critically on the development of the field and to explore concepts, approaches, and insights valuable to their own work. The selections are organized in ten chapters that survey the history of the movement, the seminal ideas of founding thinkers and today's practitioners, changing concepts of world historical space and time, comparative methods, environmental history, the "big history" movement, globalization, debates over the meaning of Western power, and ongoing questions about the intellectual premises and assumptions that have shaped the field.

GPS Paul E. Ceruzzi 2018-11-06 A concise history of GPS, from its military origins to its commercial applications and ubiquity in everyday life. GPS is ubiquitous in everyday life. GPS mapping is standard

equipment in many new cars and geolocation services are embedded in smart phones. GPS makes Uber and Lyft possible; driverless cars won't be able to drive without it. In this volume in the MIT Press Essential Knowledge series, Paul Ceruzzi offers a concise history of GPS, explaining how a once-obscure space technology became an invisible piece of our infrastructure, as essential to modern life as electric power or clean water. GPS relays precise time and positioning information from orbiting satellites to receivers on the ground, at sea, and in the air. It operates worldwide, and its basic signals are free, although private companies can commodify the data provided. Ceruzzi recounts the origins of GPS and its predecessor technologies, including early aircraft navigation systems and satellites. He describes the invention of GPS as a space technology in the post-Apollo, pre-Space Shuttle years and its first military and commercial uses. Ceruzzi explains how the convergence of three major technological developments—the microprocessor, the Internet, and cellular telephony—enabled the development and application of GPS technology. Recognizing the importance of satellite positioning systems in a shifting geopolitical landscape—and perhaps doubting U.S. assurances of perpetual GPS availability—other countries are now building or have already developed their own systems, and Ceruzzi reports on these efforts in the European Union, Russia, India, China, and Japan.

Out of Place Edward W. Said 2012-10-24 From one of the most important intellectuals of our time comes an extraordinary story of exile and a celebration of an irrecoverable past. A fatal medical diagnosis in 1991 convinced Edward Said that he should leave a record of where he was born and spent his childhood, and so with this memoir he rediscovers the lost Arab world of his early years in Palestine, Lebanon, and Egypt. Said writes with great passion and wit about his family and his friends from his birthplace in Jerusalem, schools in Cairo, and summers in the mountains above Beirut, to boarding school and college in the United States, revealing an unimaginable world of rich, colorful characters and exotic eastern landscapes. Underscoring all is the confusion of identity the young Said experienced as he came to terms with the dissonance of being an American citizen, a Christian and a Palestinian, and, ultimately, an outsider. Richly detailed, moving, often profound, *Out of Place* depicts a young man's coming of age and the genesis of a great modern thinker.

When Affirmative Action Was White: An Untold History of Racial Inequality in Twentieth-Century America

Ira Katznelson 2006-08-17 A study on the lesser-known origins of affirmative action argues that key programs passed during the New Deal and Fair Deal era of the 1930s and 1940s were purposefully discriminatory, revealing how Southern democrats widened the gap between black and white Americans through specific restrictions in social security, the GI bill, and landmark labor laws. GPS Guochang Xu 2003-06-24 This reference and handbook describes static, kinematic and dynamic Global Positioning System (GPS) theory, algorithms and applications. It is primarily based on source-code descriptions of the KSGSoft program developed by the author at the GFZ in Potsdam. The theory and algorithms are revised and extended for a new development of a multiple functional GPS software. New concepts such as the unified GPS data processing method and ambiguity-ionospheric algorithm, as well as general ambiguity search criteria, are reported for the first time. Mathematically rigorous, the book begins with the basics of coordinate and time systems and satellite orbits, as well as GPS observables, and deals with topics such as physical influences, observation equations, adjustment and filtering, ambiguity resolution, data processing, kinematic positioning, and the determination of perturbed orbits.
